Dear Tim,

1) A new revised block diagram has been prepared by the applicant. It will be uploaded.

2) It is indicated on the Form 731 that confidentiality is not required.

3) The revised test report mentions the ANSI C63.4-2003 as the test standard on page 2. The device has been tested with this standard.

4) Test report has been revised and will be uploaded. The requirement to position portable device in 3 orthogonal axis during exploratory test is mentioned at the bottom of page 6 of the test report. The positions mentioned on page 7 are only the initial configuration at the start of the test.

5) Test report has been amended to indicate the use of loop antenna for field strength measurement below 30MHz: see page 6 and page 8 of the revised test report.

6) See point 5) above.

7) The test report is amended to have the RBW = 120 kHz for measurement above 30 MHz stated explicitly in the remark on page 7.

Yours sincerely,

WAI Leong
