

mimio wireless

Block Diagram

The mimio wireless system consists of two wireless modules that provide a cable-replacement function for the mimio Xi product. The first module shown in Figure 1 (USB wireless module / receiver) connects to the PC. The second module shown in Figure 2 (wireless device module) connects to the mimio Xi device.

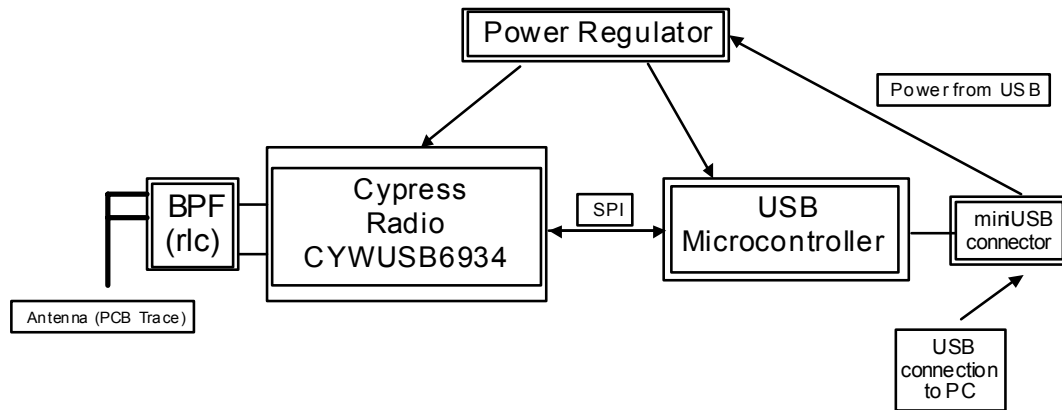

Figure 1: USB wireless module / receiver

Figure 2 shows the wireless device module that replaces the original linkUSB module in the mimio Xi product. This module also provides the user interface (buttons and LED's) needed by the product.

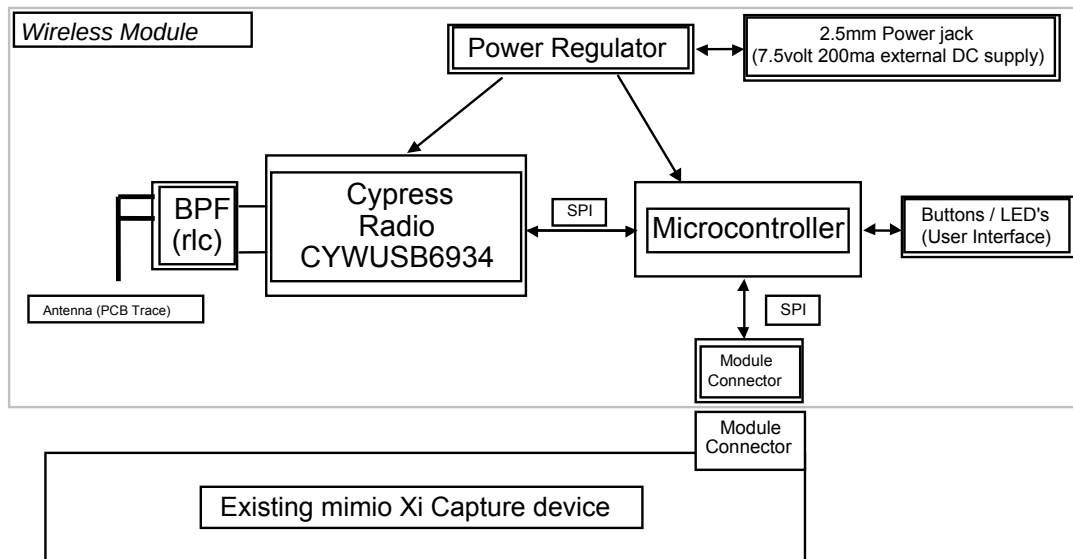

Figure 2: Wireless device module with attached mimio Xi capture device.
