

MidiStream FCC ID & compliance label artwork

The label is to be printed white on black, fixed onto the left side of the transmitter unit.
The label is to be of vinyl material with a permanent adhesive (3M Scotchcal 100 or equivalent).
The label is to have radiused corners to minimise the possibility of accidental removal.
The label is on a face of the unit which is unlikely to experience wear by rubbing.

Alternatively, if production volumes permit at a later date, we would wish to silk-screen the above in white directly onto the black paintwork in the same location.
