ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate compliance with FCC CFR 47: Parts 15 and 24. The sample tested was found to comply with the requirements defined in the applied rules.

1.2 INTRODUCTION

The information contained within this report is intended to show verification of compliance of the Maxon Telecom Co Ltd MX-C99 to the requirements of FCC Specification Part 24 and Part 15.

Testing was carried out in support of an application for Grant of Equipment Authorisation in the name of Maxon Telecom Co Ltd.

1.3 BRIEF SUMMARY OF RESULTS

A brief summary of the tests carried out is shown below.

Test	Spec Clause	Test Description	Result	Comments
2.1	2.1046, 24.232 (b)	Maximum Peak Output Power (conducted)	PASS	-
2.2	2.1046, 24.232 (b)	Maximum Peak Output Power (radiated)	PASS	-
2.3	2.1047(d)	Modulation Characteristics	PASS	-
2.4	2.1049, 24.238(b)	Occupied Bandwidth	PASS	-
2.5	2.1049, 24.229	Spurious Emissions at Antenna Terminal (+/- 1MHz)	PASS	-
2.6	24.238	Radiated Emissions	PASS	-
2.7	2.1051, 24.238(a)	Conducted Spurious Emissions	PASS	-
2.8	2.1055, 24.135(a)	Frequency Stability Under Temperature Variation	PASS	-
2.9	24.235	Frequency Stability Under Voltage Variation	PASS	-

1.4 OPINIONS AND INTERPRETATIONS

Our UKAS Accreditation does not cover opinions and interpretations and any expressed are outside the scope of our UKAS Accreditation.

1.5 PRODUCT INFORMATION

1.5.1 Technical Description

The Maxon MX-C99 Tri Band Terminal Equipment operates from a 3.8 volt battery. At 1900MHz it is Power Class 10, operating with a maximum output power of 1 watt.

1.5.2 Modes of Operation

Modes of operation of the EUT during testing were as follows:

Applicable testing was carried out with the EUT transmitting at maximum power or receiving as detailed in Section 1.5.3.

1.5.3 PCS1900MHz Transmitting on the following channels and frequencies;

Bottom Channel 512: 1850.2MHz

Middle Channel 661: 1880.0MHz

Top Channel 810: 1909.8MHz

1.6 TEST CONDITIONS

For Radiated tests, the Maxon MX-C99 was powered by its own internal battery. The EUT was set-up simulating a typical user installation on the Alternative Open Field Test Site identified in Appendix A, and tested in accordance with the applicable specification.

For remaining tests the MX-C99 was powered using a battery eliminator.

SECTION 2

TEST DETAILS

FCC CFR 47: Parts 15 and 24 Testing in support of an
Application for Grant of Equipment Authorisation
of a Maxon Telecom Co Ltd MX-C99 Tri-Band Terminal Equipment

2.1 MAXIMUM PEAK OUTPUT POWER (CONDUCTED)

2.1.1 FCC CFR 47: Part 24 Subpart E, Section 2.1046 (a), 24.232 (b)

2.1.2 Equipment Under Test MX-C99

2.1.3 Date of Test 1st March 2004

2.1.4 Test Equipment Used (See Section 3.1 for details) 1, 2, 3, 4, 5, 6, 7

2.1.5 Test Procedure

Using a spectrum analyser and attenuator(s), the output power of the EUT was measured at the antenna terminals. The EUT supports both GSM and GPRS. The device is a Class 10 mobile. The carrier was modulated by its normal GMSK modulation and measurements performed with timeslot 3 active. In GPRS mode, timeslots 3 and 4 were active.

The spectrum analyser RBW and VBW were set to 1MHz and the path loss measured and entered as a reference level offset.

2.1.6 Test Results

Maximum Power - GSM

Frequency (MHz)	Output Power (dBm)	Path Loss (dB)	Result (dBm)	Result (W)
1850.2	11.13	17.8	28.93	0.782
1880.0	11.47	17.8	29.27	0.845
1909.8	10.88	18.0	28.88	0.773

Minimum Power- GSM

Frequency (MHz)	Output Power (dBm)	Path Loss (dB)	Result (dBm)	Result (mW)
1850.2	-17.31	17.8	0.49	1.119
1880.0	-16.72	17.8	1.08	1.282
1909.8	-17.41	18.0	0.59	1.146

2.1 MAXIMUM PEAK OUTPUT POWER (CONDUCTED) - Continued

Maximum Power - GPRS

Frequency (MHz)	Output Power (dBm)	Path Loss (dB)	Result (dBm)	Result (W)
1850.2	11.09	17.8	28.89	0.774
1880.0	11.39	17.8	29.19	0.830
1909.8	10.85	18.0	28.85	0.767

Minimum Power- GPRS

Frequency (MHz)	Output Power (dBm)	Path Loss (dB)	Result (dBm)	Result (mW)
1850.2	-17.47	17.8	0.33	1.079
1880.0	-16.90	17.8	0.90	1.230
1909.8	-17.58	18.0	0.42	1.102

Limit	<2W or <+33dBm
-------	----------------

Remarks

EUT complies with CFR 47 2.1046 and 24.232(b). The EUT does not exceed 2W or +33dBm at the measured frequencies.

2.2 MAXIMUM PEAK OUTPUT POWER (RADIATED)

2.2.1 Specification Reference

FCC CFR 47: Part 24 Subpart E, Section 24.232

2.2.2 Equipment Under Test

MX-C99

2.2.3 Date of Test

8th March 2004

2.2.4 Test Equipment Used (See Section 3.1 for details)

17,18,21,24,26.

2.2.5 Test Procedure

Test Performed in accordance with ANSI C63.4.

The EUT has an Integral antenna, therefore the Maximum Peak Output Power (EIRP) was made using the Radiated method.

The Spectrum Analyser was tuned to the test frequency. The device Output Power setting was controlled as specified in the Product Information, Section 1.5 of this document. The device was then rotated through 360 degrees, and the measuring antenna height searched (1m – 4m) until the highest power level was observed in both horizontal and vertical polarisation. The device was then replaced with a substitution antenna, who's input signal to the antenna was adjusted until the received level matched that of the previously detected emission.

2.2.6 Test Results

Measurements were made with the EUT in PCS 1900MHz.

The EUT met the requirements of FCC Part 24, Section 24.232, Power and Antenna Height Limits.

Frequency (MHz)	Raw Result (dBm)	Substitution Level (dBm)	Substitution Antenna Gain (dB)	Result EIRP (dBm)	EIRP Limit (dBm)	Result EIRP (mW)
1850.2	-15.8	20.2	8.8	29.0	33.0	794.33
1880.0	-14.8	21.1	8.8	29.9	33.0	977.24
1909.8	-13.9	21.9	8.8	30.7	33.0	1174.89

2.3 MODULATION CHARACTERISTICS

2.3.1 FCC CFR 47: Part 24 Subpart E, Section 2.1047(d)

2.3.2 Equipment Under Test MX-C99

2.3.3 Date of Test 10th March 2004

2.3.4 Test Equipment Used 3, 4, 5, 8, 9, 12, 13

2.3.5 Modulation Data supplied by Maxon.

The system is designed to meet the PCS requirements as defined in the 3GPP specifications: 3GPP TS 05:01, TS 05:02 and TS 05:04 are the most relevant. To summarize the system uses time division multiplexed access (TDMA) to separate eight users on a channel and frequency multiplexing for the up and down links.

There are 299 channels on a 200kHz raster. The frequency band 1930~1990MHz is allocated to the downlink and 1850~1910MHz to the uplink. The duplex frequency is 80MHz and the up and down link is offset in time by three TDMA slots.

The bit rate is 13MHz/48 ($\approx 270.833\text{kHz}$). There are 1250 bits in a frame that contains the eight slots; one of which is allocated to each user. Therefore each slot is 156.25 bits in length and lasts $\approx 577\mu\text{s}$. To allow control information to be interleaved amongst the user data there is a larger unit comprising 26 frames called a multi-frame. The existence of the multi-frame and the associated timing allows extra protection against data corruption by interleaving frames.

The modulation described by TS 05:04 is a differentially encoded scheme where the data are represented by phase shifts of $\pm\pi/2$ over a bit period. The modulation scheme implemented is Gaussian filtered minimum shift keying (GMSK). Minimum shift keying is a special case of frequency shift keying (FSK) with a modulation index of $h = 0.5$. FSK is a binary modulation scheme with each of the two logical states represented by a different offset from the nominal carrier frequency.

From the well known equation

$$h = 2 \cdot F_p \cdot T_b$$

where h is the modulation index, F_p is the peak frequency deviation and T_b is the bit period the peak frequency deviation is shown to be $\approx \pm 67.7\text{kHz}$.

Minimum shift keying has a relatively wide frequency spectrum. To improve spectral efficiency Gaussian filtering is applied to modulation source resulting in a sinusoidal, rather than instantaneous, transition between the two offset frequencies determined by the modulation data and, therefore, a reduced signal bandwidth. The 3dB bandwidth of the Gaussian filter is 81.25kHz.

A complete description of the modulation and filtering is attached in the following annex.

2.3 MODULATION CHARACTERISTICS - Continued

Annex to Description of Modulation Characteristics

The differentially encoded modulating data values α_i ($\alpha_i \in \{-1, +1\}$) as represented by Dirac pulses excite a linear filter with impulse response at time t defined by:

$$g(t) = h(t) * \text{rect}\left(\frac{t}{T}\right)$$

where T is the bit period and the function $\text{rect}(x)$ is defined by:

$$\text{rect}\left(\frac{t}{T}\right) = \frac{1}{T} \quad \text{for } |t| < \frac{T}{2}$$

$$\text{rect}\left(\frac{t}{T}\right) = 0 \quad \text{otherwise}$$

and $*$ means convolution. $h(t)$ is defined by:

$$h(t) = \frac{\exp\left(\frac{-t^2}{2\delta^2 T^2}\right)}{\sqrt{(2\pi)} \cdot \delta T}$$

where
$$\delta = \frac{\sqrt{\ln(2)}}{2\pi BT} \quad \text{and } BT = 0.3$$

where B is the 3 dB bandwidth of the filter with impulse response $h(t)$.

The phase of the modulated signal is:

$$\phi(t') = \sum_i \alpha_i \pi h \int_{-\infty}^{t'-iT} g(u) du$$

where the modulating index h is $1/2$ (maximum phase change in radians is $\pi/2$ per data interval). The time reference $t' = 0$ is the start of the slot.

The modulated RF carrier is expressed as:

$$x(t') = \sqrt{\frac{2E_c}{T}} \cdot \cos(2\pi f_0 t' + \phi(t') + \phi_0)$$

where E_c is the energy per modulating bit, f_0 is the centre frequency and ϕ_0 is a random phase and is constant during one burst

GSM

The EUT was set to transmit on maximum power and measurements were made on Timeslot 3.

GPRS

The EUT was set to transmit on maximum power, (timeslots 3 and 4 active), and measurements were performed on Timeslot 3.

Using a resolution bandwidth of 30kHz and a video bandwidth of 100kHz, the –26dBc points were established and the emission bandwidth determined.

The plots below show the resultant display from the Spectrum Analyser.

2.5.3 Date of Test 10th March 2004

2.5.4 Test Equipment Used (See Section 3.1 for details) 3, 4, 5, 8, 9, 12, 13

2.5.5 Test Procedure

In accordance with Part 24.238, at least 1% of the 26dB bandwidth was used for the resolution and video bandwidths up to 1MHz away from the Block Edge. At greater than 1MHz, the resolution and video bandwidths were increased to 1MHz.

were The reference power and path losses of all channels used for testing in each frequency block measured. Having entered the reference level offset, the limit line was displayed, showing the – 13dBm, (43+10logP), limit.

The EUT was tested in GSM and GPRS modes of operation.

Below are the Frequency Blocks the EUT was tested against along with the tested channels.

Frequency Block (MHz)	Lower Block Edge Test Channels/Frequencies	Upper Block Edge Test Channels/Frequencies
A	Channel : 513 Frequency : 1850.4 MHz	Channel : 584 Frequency : 1864.6 MHz

**2.5 SPURIOUS EMISSIONS AT ANTENNA TERMINALS (+/-1MHz) – Continued**

Block Edge Measurement with EUT Transmitting on full power on Channel 734, (1894.6MHz)

Block F

GPRS – Packet Data

2.5 SPURIOUS EMISSIONS AT ANTENNA TERMINALS (+/-1MHz) – Continued

2.5.6 Test Results

All emissions are below -13dBm up to 1MHz away from each block edge.

2.6 RADIATED EMISSIONS

2.6.1 Specification Reference

FCC CFR 47: Part 24 Subpart E, Section 24.238

2.6.2 Equipment Under Test

MX-C99

2.6.3 Date of Test

8th to 10th March 2004

2.6.4 Test Equipment Used (See Section 3.1 for details)

15,16,17,18,19,20,22,23,24,25,26.

2.6.5 Test Procedure

Test Performed in accordance with ANSI C63.4.

In order to determine the Radiated Emission Limits, measurements of transmitter power (P) were first carried out on the top and bottom channels using a peak detector, and the results are shown in the following table.

A preliminary profile of the Spurious Radiated Emissions was obtained by operating the EUT on a remotely controlled turntable within a semi-anechoic chamber. Measurements of emissions from the EUT were obtained with the Measurement Antenna in both Horizontal and Vertical Polarisations. The profiling produced a list of the worst-case emissions together with the EUT azimuth and antenna polarisation.

Using the information from the preliminary profiling of the EUT. The list of emissions was then confirmed or updated under Alternative Open Site conditions. Emission levels were maximised by adjusting the antenna height, antenna polarisation and turntable azimuth.

Emissions identified within the range 30MHz – 1GHz were then formally measured using a CISPR Quasi-Peak Detector (PCS 1900 Idle Mode) to meet Part 15B specification requirements.

Emissions identified within the range 30MHz – 1GHz were then formally measured using a Peak Detector (PCS 1900 Link Modes) to meet Part 24.238 specification requirements.

Emissions identified within the range 1GHz – 20GHz were then formally measured using a Peak Detector, (PCS 1900 Link Modes) to meet Part 24.238 specification requirements, as appropriate.

The measurements were performed at a 3m distance unless otherwise stated.

2.6 RADIATED EMISSIONS - continued

2.6.6 Test Results

Measurements were made with the EUT in PCS 1900MHz.

The measurements of transmitter power, (P), on top and bottom channels are detailed in the table below.

Freq MHz	Res BW MHz	Vid BW MHz	Ant Pol V/H	Ant Hgt cm	EUT Azi Deg	Raw PEAK dBμV	Cable loss dB	Antenna Factor dB	Result Peak dBμV/m
Tx Channel 512									
1850.2	1	1	H	122	300	92.1	8.8	26.7	127.5
Tx Channel 661									
1880.0	1	1	H	120	303	91.9	8.8	26.7	127.4
Tx Channel 810									
1909.8	1	1	H	117	310	93.2	8.9	27.0	129.1

The limit for spurious emissions in accordance with FCC 47 CFR 24.238 is $43 + 10\log(P)$ down on the carrier where P is the power in Watts.

As the EIRP for the Top Channel is 1.17489W the spurious limit is $43 + 10\log(P) = 43.7$ dB down on the carrier.

As the EIRP for the Middle Channel is 0.97724W the spurious limit is $43 + 10\log(P) = 42.9$ dB down on the carrier.

As the EIRP for the Bottom Channel is 0.79433W the spurious limit is $43 + 10\log(P) = 42.0$ dB down on the carrier.

Using the results obtained on the Three channels the following limits were calculated:

Top Channel 512: $129.1\text{dB}\mu\text{V/m} - 43.7\text{dB} = 85.4\text{dB}\mu\text{V/m}$

Middle Channel 661: $127.4\text{dB}\mu\text{V/m} - 42.9\text{dB} = 84.5\text{dB}\mu\text{V/m}$

Bottom channel 810: $127.5\text{dB}\mu\text{V/m} - 42.0\text{dB} = 85.5\text{dB}\mu\text{V/m}$

These limits have been used to determine Pass or Fail for the harmonics or spurious emissions measured and detailed in the following tables.

Abbreviation for Table

Res BW	Resolution Bandwidth
Vid BW	Video Bandwidth
Ant Pol	Antenna Polarisation
Ant Hgt	Antenna Height
Azm	Azimuth
V	Vertical
H	Horizontal

2.7 CONDUCTED SPURIOUS EMISSIONS

2.7.1 FCC CFR 47: Part 24 Subpart E, Section 2.1051, 24.238(a)

2.7.2 Equipment Under Test MX-C99

2.7.3 Date of Test 5th and 10th March 2004

2.7.4 Test Equipment Used (See Section 3.1 for details) 1, 3, 4, 5, 8, 9, 10, 11, 12

2.7.5 Test Procedure

In accordance with Part 2.1051, the spurious emissions from the antenna terminal were measured. The transmitter output power was attenuated using a combination of filters and attenuators and the frequency spectrum investigated from 9kHz to 20 GHz. The EUT was set to transmit on full power with timeslot 3 active and minimum power with timeslot 3 active. The EUT was tested on Bottom, Middle and Top channels for both power levels. The resolution and video bandwidths were set to 1MHz in accordance with Part 24.238. The spectrum analyser detector was set to Max Hold.

For measuring the range 9kHz to 4GHz, on maximum power, a 10dB attenuator was used. From 4 to 20GHz an attenuator and a high pass filter were used.

The maximum path loss across the measurement band was used as the reference level offset to ensure worst case

In addition, measurements were made up to the 10th harmonic of the fundamental.

For GPRS, all test conditions were the same except 2 timeslots were active, (3 and 4).

2.7.6 Test Results

The EUT passed the requirements laid out in 24.238. The plots on the following pages show the frequency spectrum from 9kHz to 20GHz of the EUT.

2.8 FREQUENCY STABILITY UNDER TEMPERATURE VARIATIONS

2.8.1 FCC CFR 47: Part 24 Subpart E, Section 2.1055, 24.235

2.8.2 Equipment Under Test MX-C99

2.8.3 Date of Test 11th March 2004

2.8.4 Test Equipment Used (See Section 3.1 for details) 3, 4, 5, 8, 9, 12, 13, 14

2.8.5 Test Procedure

GSM

The EUT was set to transmit on maximum power and measurements were made on Timeslot 3. A Digital Communications Analyser, (CMU200), was used to measure the Frequency Error. The maximum result of measurements made over 200 bursts was recorded.

GPRS

The EUT was set to transmit on maximum power, (timeslots 3 and 4 active), and measurements performed on Timeslot 3. A Digital Communications Analyser, (CMU200), was used to measure the Frequency Error. The maximum result of measurements made over 200 bursts was recorded.

2.8.6 Test Results

GSM – Circuit Switched

Temperature Interval(°C)	Test Frequency (GHz)	Deviation (Hz)
- 30	1.88	-36
- 20	1.88	+21
- 10	1.88	+21
0	1.88	+32
+ 10	1.88	+17
+ 20	1.88	-17
+ 30	1.88	+26
+ 40	1.88	+31
+ 50	1.88	-27

2.8 FREQUENCY STABILITY UNDER TEMPERATURE VARIATIONS – Continued

GPRS – Packet Data

Temperature Interval(°C)	Test Frequency (GHz)	Deviation (Hz)
- 30	1.88	-49
- 20	1.88	-39
- 10	1.88	+22
0	1.88	+25
+ 10	1.88	-38
+ 20	1.88	+19
+ 30	1.88	-38
+ 40	1.88	+23
+ 50	1.88	-42

Remarks

EUT complies with CFR 47 Part 24.235. The frequency drift of the EUT over the temperature range is sufficiently stable to keep it within the authorised frequency blocks.

2.9 FREQUENCY STABILITY UNDER VOLTAGE VARIATIONS

2.9.1 FCC CFR 47: Part 24 Subpart E, Section 2.1055, 24.235

2.9.2 Equipment Under Test MX-C99

2.9.3 Date of Test 11th March 2004

2.9.4 Test Equipment Used (See Section 3.1 for details) 3, 4, 5, 8, 9, 12, 13

2.9.5 Test Procedure

GSM

The EUT was set to transmit on maximum power and measurements were made on Timeslot 3. A Digital Communications Analyser, (CMU200), was used to measure the Frequency Error. The maximum result of measurements made over 200 bursts was recorded.

GPRS

The EUT was set to transmit on maximum power, (timeslots 3 and 4 active), and measurements performed on Timeslot 3. A Digital Communications Analyser, (CMU200), was used to measure the Frequency Error. The maximum result of measurements made over 200 bursts was recorded.

2.9.6 Test Results

GSM

DC Voltage (V)	Test Frequency (GHz)	Deviation (Hz)
4.2	1.88	-23
3.8	1.88	-20
3.5	1.88	+20

**2.9 FREQUENCY STABILITY UNDER VOLTAGE VARIATIONS - Continued**

GPRS

DC Voltage (V)	Test Frequency (GHz)	Deviation (Hz)
4.2	1.88	-42
3.8	1.88	-35
3.5	1.88	-38

Remarks

EUT complies with CFR 47 Part 24.235. The frequency drift of the EUT under voltage variation is sufficiently stable to keep it within the authorised frequency blocks.

3.2 MEASUREMENT UNCERTAINTY

For a 95% confidence level, the measurement uncertainties for defined systems are:-

IN THE FREQUENCY RANGE 30MHz TO 1000MHz		
TEST	FREQUENCY	AMPLITUDE
For Occupied Bandwidth	$\pm 210.894\text{kHz}$	$\pm 0.5\text{dB}$
For Maximum Output Power	Not Applicable	$\pm 0.5\text{dB}$
For Radiated Emissions, Quasi-Peak Measurements taken in Zero Span using the Hewlett Packard EMI Receiver and Bilog Antenna	$\pm 2 \times 10^{-7} \times \text{Centre Frequency}$	5.15dB calculated in accordance with CISPR 16-4
For Spurious Conducted Emissions	Not Applicable	$\pm 3.0\text{dB}$
IN THE FREQUENCY RANGE 1GHz TO 20GHz		
TEST	FREQUENCY	AMPLITUDE
For Spurious Radiated Emissions measurements	$\pm 2 \times 10^{-7} \times \text{Centre Frequency}$	$\pm 3.4\text{dB}$
For Effective Radiated Power (ERP) measurements	Not Applicable	$\pm 1.45\text{dBm}$

APPENDIX A

TITCHFIELD FCC SITE COMPLIANCE LETTER

FEDERAL COMMUNICATIONS COMMISSION

**Laboratory Division
7435 Oakland Mills Road
Columbia, MD 21046**

October 18, 2002

Registration Number: 90987

TUV Product Service Ltd
Segensworth Road
Titchfield
Fareham, Hampshire, PO15 5RH
United Kingdom
Attention: Kevan Adsetts

Re: Measurement facility located at Titchfield
Anechoic chamber (3 meters) and 3 & 10 meter OATS
Date of Listing: October 18, 2002

Gentlemen:

Your request for registration of the subject measurement facility has been reviewed and found to be in compliance with the requirements of Section 2.948 of the FCC rules. The information has, therefore, been placed on file and the name of your organization added to the list of facilities whose measurement data will be accepted in conjunction with applications for Certification under Parts 15 or 18 of the Commission's Rules. Please note that the file must be updated for any changes made to the facility and the registration must be renewed at least every three years.

Measurement facilities that have indicated that they are available to the public to perform measurement services on a fee basis may be found on the FCC website www.fcc.gov under E-Filing, OET Equipment Authorization Electronic Filing, Test Firms.

Sincerely,

Thomas W Phillips
Electronics Engineer
