

Operational Description

1. audio input be dealt the impedance, then it be sent to BH 1415 transmitter module. The transmitter module transmit the FM any one signal form 88.1 to 107.9MHz according require of the transmitter controller. The audio signal be transmitted via the transmit antenna.
2. power input and power step-up, the 3.3v voltage be step up to 5v, the transmitter, the transmitter controller and the memory operation voltage is 5v, it make three part working good.
3. operation key, operating the transmit the transmit frequency and memory the frequency.
