Subject:

Declaration Letter for professional installation of Wireless Field Interface in the Field

To whomsoever it May Concern:

Wireless Field Interface with Low Cost Radio Module (2.4GHz band 802.15.4 Radio) will communicate to the Host Device over the Wireless Interface.

Honeywell declares that Wireless Field Interface with Low Cost Radio Module requires a special set of skills for installation and configuration i.e. checking signal strength before installation using proprietary tool for wireless network for best performance. Also OEM installer has to present the final product to Honeywell for verification that the correct radio parameters are used, and that the power settings of the module are not end-user accessible. Hence, this device cannot be sold to general public through retail or by mail order.

Honeywell ensures that Wireless Field Interface with Low Cost ISA100 Radio Module is to be sold only through dealers and will be installed through professionals assigned by dealers only who are proficient in programming, installing and commissioning wireless networks

Best Regards,
