TCB Review Comments for (B06-0529a- SAN-PP400BGX-PePLink PolePoint Outdoor)

-EMC-

Question #1: If certified module is used for this product, then label needs to show "Contains FCC ID: xxxx", otherwise please remove related info from test report and treat this as a new application and supply block diagram and schematic.

<Reply>The 11bg module is purchased from OEM and this product already been certified as a module, but due to the use of different output power and antenna, we have retest whole radio. Due to confidential concern, the schematic and block diagram is not available from OEM. Please refer to original filing FCC ID: SWX-SR2. The product is identical, except different

output power and antenna are incorporated in this application.

Question #2: Product seems for professional installed product and standard N type connector is used in the product. However, no professional installation declaration letter and related info are found in the manual. Please clarify if this is a professional installed device.

<Reply> Product is for professional installation only, please see uploaded declaration letter and revised manual.

Best regards,

[Steve Cheng](#)
