Equipment Under Test (EUT)

Nordic ID Medea with 802.11 a/b/g/n and BT 2.1 + EDR module	
Brand:	Nordic ID
Model No:	815-1A
Type:	HTG00017
FCC ID (RFID radio module):	SCCNUR05WL2
IC ID (RFID radio module):	5137A-NUR05WL2
FCC ID (WLAN a/b/g/n + Bluetooth 2.1 module):	TWG-SDC SSD40NBT
IC ID (WLAN a/b/g/n + Bluetooth 2.1 module):	6616A-SDC SSD40NBT

Description of the EUT

The EUT is a battery operated portable computer with RFID and barcode reader. Nordic ID medea also includes (FCC ID: TWG-SDC SSD40NBT) 802.11 a/b/g/n WLAN and Bluetooth v2.1 + EDR module This report includes only the RFID test results.

Classification of the device

Fixed device	☐
Mobile Device (Human body distance > 20cm)	☐
Portable Device (Human body distance < 20cm)	☒

Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing

Ratings and declarations

RFID:

Operating Frequency Range (OFR):	902 – 928 MHz
Channels:	52
Channel separation:	500 kHz
Conducted power:	25.77 dBm
Transmission technique:	FHSS
Modulation:	ASK, PR-ASK
Maximum antenna gain:	3 dBi

Power Supply

Battery / AC operated	3.7 VDC / 100-240 VAC, 50-60 Hz
-----------------------	---------------------------------

Disclaimer

This document is issued by the Company under its General Conditions of service accessible at [http://www.sgs.com/terms and conditions.htm](http://www.sgs.com/terms_and_conditions.htm). attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only. This document cannot be reproduced except in full, without prior approval of the Company.

SUMMARY OF TESTING

Test Specification	Description of Test	Result
§15.209 / RSS-GEN 7.2.3.2	Unintentional Radiated Emissions	PASS

EUT Test Conditions during Testing

The EUT was configured into the wanted channel and was in continuous transmit mode during all the tests.

All of the tests were performed in the PR-ASK modulation. The decision was based on the test results of the previous evolution of the NUR05 module, there were no major differences in the results of the other tests than the ones that were made with both modulations.

The transmit power were measured with a spectrum analyzer. Highest power was measured with data rate PR-ASK (25.77 dBm). The radiated spurious emissions tests were performed with the EUT being in three different orthogonal positions: X, Y, Z.

Following channels were used during the tests:

Channel	Frequency/ MHz
LOW (CH 1)	902.250
MID (CH 26)	914.750
HIGH (CH 52)	927.750

Test Facility

☐ Testing Location / address: FCC registration number: 90598	SGS Fimko Ltd Särkiniementie 3 FI-00210, HELSINKI FINLAND
☒ Testing Location / address: FCC registration number: 178986 Industry Canada registration number: 8708A-2	SGS Fimko Ltd Karakaarenkuja 4 FI-02610, ESPOO FINLAND

Transmitter Radiated Emissions 30 MHz to 26.5 GHz and Band Edge

Standard:	ANSI C63.10	(2009)
Tested by:	NKO	
Date:	16.2.- 23.2.2015	
Temperature:	21 - 23 °C	
Humidity:	29 - 39 % RH	
Measurement uncertainty	± 4.51 dB	Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a)

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a).

The correction factor in the final result table contains the sum of the transducers (antenna + amplifier + cables). The result value is the measured value corrected with the correction factor.

Test results
