Report prepared by:

Jeremy Pickens / Senior Staff Engineer

Report reviewed by:

Brian Lackey / EMC Staff Engineer

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

1 Introduction and Conclusion

The tests indicated in Section 2 were performed on the product constructed as described in Section 4. The remaining test sections are the verbatim text from the actual data sheets used during the investigation. These test sections include the test name, the specified test Method, a list of the actual Test Equipment Used, Results and raw Data. No additions, deviations, or exclusions have been made from the standard(s) unless specifically noted.

Based on the results of our investigation, we have concluded the product tested **complies** with the requirements of the standard(s) indicated. The results obtained in this test report pertain only to the item(s) tested. Intertek does not make any claims of compliance for samples or variants which were not tested.

2 Test Summary

Section	Test Description	Test Specification		Result

4 Description of Equipment Under Test and Variant Models

Manufacturer: Sensus Metering Systems Inc.
639 Davis Drive
Morrisville, NC 27560 USA

Equipment Under Test			
Description	Manufacturer	Model Number (HVIN)	Serial Number
Transceiver Module	Sensus Metering Systems Inc.	FLEXKV2C	083 ¹ 057 ²

- 1) Antenna port conducted measurements
- 2) Radiated spurious emissions measurements

Receive Date:	27 May 2025
Received Condition:	Good
Type:	Production

Description of Equipment Under Test

This transceiver module is a standard FlexNet protocol with FEM controlled output capable of 1W nominal conducted output power. The modular design enables Sensus partner with Aclara to locate the transceiver in several standard S form meters retailed to Utilities.

Certification Purpose

Class II Permissive Change: Sensus is updating the PCBA with a new Skyworks Front End Module (FEM), P/N: CC1120.

Equipment Under Test Power Configuration

Rated Voltage	Rated Current	Rated Frequency	Number of Phases
20Vdc	450mA	NA	NA

Operating modes of the EUT

No.	Descriptions of EUT Exercising
1	Using FlexNet Spotlight software, commands were sent over USB and then over the air via an adapter board equipped with a magnetic loop. The EUT was configured to transmit modulated signals at max power at the following defined test channels (per 47CFR 2.1046 – 2.1057).

Test Channels			
FCC Rule Part	Frequency Band (MHz)	Channel Location	Test Frequency (MHz)
24D	901.0 – 902.0	Middle	901.5
101	928.85 – 929.0	Middle	928.925
24D	930.0 – 931.0	Middle	930.5
101	932.0 – 932.5	Middle	932.25
24D	940.0 – 941.0	One near top and one near bottom	940.0125
101	941.0 – 941.5		941.4875
101	952.0 – 953.0	Middle	952.5
101	959.85 – 960.0	Middle	959.925

Software used by the EUT

No.	Description of Control Software
1	FlexNet Spotlight v2.2.3.0

Radio/Receiver Characteristics	
Frequency Range	901-960MHz
Modulation Type(s)	7-FSK, 13-FSK, 2-GFSK, 4-GFSK, 2-SFSK, 4-SFSK, 8-SFSK
Maximum Output Power (Conducted):	30.47dBm (1.11W)
Power Setting	Max
MIMO Information (# of Transmit and Receive antenna ports)	1 (SISO)
Equipment Type	Full Module
Antenna Type and Gain	Integral (-0.47dBi)

Note: The worst-case modulations for radiated and conducted spurious emissions were determined to be Normal and mPass 5k. The worst-case orientation for radiated field strength measurements was the Y-Axis.

X-Axis 	Y-Axis 	Z-Axis

5.1 Method

Configuration as required by ANSI C63.26.

5.2 EUT Block Diagram – Radiated Measurements

5.3 EUT Block Diagram – Conducted Measurements

6 RF Output Power

6.1 Method

The methods defined in ANSI C63.26, Section 5.2.3.2 were applied for measuring the peak output power. The antenna port was connected directly to a spectrum analyzer through a cable and 20dB attenuator (20.7dB of total loss). The attenuation was accounted for by applying an offset to the spectrum analyzer.

TEST SITE: RF Bench

The RF bench consists of a Rohde & Schwarz TS8997 automated test system coupled with a temperature/humidity environmental chamber. Where applicable, 2.4 and 5GHz radio measurements are automated using the Rohde & Schwarz EMC32 test software. The TS8997 system houses a switch matrix (OSP), along with a spectrum analyzer, vector network analyzer, and analog signal generator.

6.2 Test Equipment

Asset	Description	Manufacturer	Model	Serial	Cal Date	Cal Due
200001	Attenuator, 20 dB, <18GHz	Weinschel Corp	2	BK1848	07/26/2024	07/26/2025
212164	Barometric Pressure/Humidity Datalogger	Extech	SD700	109402	06/14/2024	06/14/2025
213502	Spectrum Analyzer (2Hz-43.5GHz)	Rohde & Schwarz	FSW43	102972	08/01/2024	08/01/2025

Software Utilized

Name	Manufacturer	Version
RSCCommander	Rohde & Schwarz	2.4.2 64-bit (2023)

6.3 Results

The sample tested was found to Comply.

6.4 Test Data

FCC Rule Part	Frequency (MHz)	Peak Power (dBm)	Peak Power (mW)	Antenna Gain (dBi)	ERP/EIRP (dBm)	Limit (dBm)
24D	901.5	30.47	1114.295	-0.47	27.85	38.45
24D	930.5	30.01	1002.305	-0.47	27.39	38.45
24D	940.0125	29.92	981.7479	-0.47	27.3	38.45
101	928.925	30.13	1030.386	-0.47	29.66	47
101	932.25	30.06	1013.911	-0.47	29.59	47
101	941.4875	29.93	984.0111	-0.47	29.46	44
101	952.5	29.73	939.7233	-0.47	29.26	44
101	959.925	29.48	887.156	-0.47	29.01	44

Calculation: $P_{EIRP} = \text{Peak Power} + \text{Antenna Gain (dBi)} \text{ (Part 101)}$
 $P_{ERP} = \text{Peak Power} + \text{Antenna Gain (dBi)} - 2.15 \text{ (Part 24)}$
 2.15 is the conversion from EIRP to ERP

Sample Plot

Test Personnel: Jeremy Pickens

Test Date: 28-29 May 2025

Ambient Temperature: 20.4 - 21.4°C

Reference Standard: ANSI C63.26

Relative Humidity: 53.8 – 58.7%

Atmospheric Pressure: 97.9 – 98.2kPa

7 Out of Band Unwanted Emissions

7.1 Method

The methods defined in ANSI C63.26, Section 5.7.3 were applied for measuring the out of band emissions. The antenna port was connected directly to a spectrum analyzer through a cable and 20dB attenuator (20.7dB of total loss). The attenuation was accounted for by applying an offset to the spectrum analyzer. For FCC, RSS-119 Mask G, and RSS-134 testing, the spectrum analyzer was configured with a 300Hz Resolution Bandwidth (RBW) and a 3kHz Video Bandwidth (VBW). For RSS-119 Mask D measurements, the spectrum analyzer was configured with a 100Hz RBW and a 300kHz VBW.

For modulations/bands where the channel spacing may be 12.5kHz or 25kHz, only the plots for 12.5kHz spacing was tested as worst-case.

TEST SITE: RF Bench

The RF bench consists of a Rohde & Schwarz TS8997 automated test system coupled with a temperature/humidity environmental chamber. Where applicable, 2.4 and 5GHz radio measurements are automated using the Rohde & Schwarz EMC32 test software. The TS8997 system houses a switch matrix (OSP), along with a spectrum analyzer, vector network analyzer, and analog signal generator.

Test Personnel: Jeremy Pickens

Test Date: 28 and 29 May 2025

Ambient Temperature: 20.4 - 21.4°C

Reference Standard: ANSI C63.26

Relative Humidity: 53.8 – 58.7%

Atmospheric Pressure: 97.9 – 98.2kPa

8 Occupied Bandwidth

8.1 Method

The methods defined in ANSI C63.26, Section 5.4.4 were applied for measuring the 99% Occupied (Power) Bandwidth (OBW). The antenna port was connected directly to a spectrum analyzer through a cable and 20dB attenuator (20.7dB of total loss). The attenuation was accounted for by applying an offset to the spectrum analyzer. The spectrum analyzer was configured with a 3dB Resolution Bandwidth (RBW) between 1% and 5% of the anticipated occupied bandwidth, the Video Bandwidth (VBW) was set to at least 3 x RBW, and the span was configured to at least 1.5 times the OBW. The 99% OBW function of the spectrum analyzer was used to take the measurements.

TEST SITE: RF Bench

The RF bench consists of a Rohde & Schwarz TS8997 automated test system coupled with a temperature/humidity environmental chamber. Where applicable, 2.4 and 5GHz radio measurements are automated using the Rohde & Schwarz EMC32 test software. The TS8997 system houses a switch matrix (OSP), along with a spectrum analyzer, vector network analyzer, and analog signal generator.
