2. Summary of Testing

2.1. General Information

Specification Reference:	47CFR15.249
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Section 15.249
Specification Reference:	47CFR15.207 and 47CFR15.209
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Sections 15.207 and 15.209
Site Registration:	209735
Location of Testing:	UL VS LTD, Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom
Test Dates:	11 October 2013 to 31 October 2013

2.2. Summary of Test Results

FCC Reference (47CFR)	Measurement	Result
Part 15.207	Transmitter AC Conducted Emissions	
Part 15.249(a)(e)	Transmitter Fundamental Field Strength	
Part 15.35(c)	Duty cycle	Note 1
Part 2.1049	Transmitter 20 dB Bandwidth

Part 15.249(d) & 15.209(a)	Transmitter Band Edge Radiated Emissions	
Key to Results  = Complied  = Did not comply		

Note(s):

1. The measurements were performed to assist in the calculation of average fundamental field strength as the EUT was in test mode and not giving a true average result.

2.3. Methods and Procedures

Reference:	ANSI C63.4 (2009)
Title:	American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz
Reference:	ANSI C63.10 (2009)
Title:	American National Standard for Testing Unlicensed Wireless Devices

2.4. Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specification identified above.

3. Equipment Under Test (EUT)

3.1. Identification of Equipment Under Test (EUT)

Brand Name:	Ubisense
Model Name or Number:	UBIMOD30
Test Sample Serial Number:	0001 (<i>Radiated sample #1</i>)
Hardware Version Number:	1.0
Software Version Number:	1.0
FCC ID:	SEAMOD30

Brand Name:	Ubisense
Model Name or Number:	UBIMOD30
Test Sample Serial Number:	0002 (<i>Radiated sample #2 used for duty cycle test</i>)
Hardware Version Number:	1.0
Software Version Number:	1.0
FCC ID:	SEAMOD30

3.2. Description of EUT

The Equipment Under Test was a location-tracking tag module containing an IEEE 802.15.4f transceiver operating in the 2.4 GHz ISM band. The unit has an integral antenna and is normally powered by host equipment from a nominal 3 VDC supply.

3.3. Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing.

3.4. Additional Information Related to Testing

Tested Technology:	IEEE 802.15.4f 2.4GHz PHY		
Power Supply Requirement:	Nominal	3.0 VDC via 120 VAC 60 Hz	
Type of Unit:	Transceiver		
Modulation Type:	MSK		
Data Rate:	250 kbit/s		
Transmit Frequency Range:	2400 to 2483.5 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	LOW	2401.750
	Middle	MID	2442.000
	Top	HIGH	2481.750

3.5. Support Equipment

The following support equipment was used to exercise the EUT during testing:

Description:	Switch-mode power supply
Brand Name:	Stontronics
Model Name or Number:	3A-061WP03
Serial Number:	T3915ST

Brand Name:	Ubisense
Description:	Power cable with multi pin connector and Light Emitting Diode
Cable Length and Type:	1.8 Metre / twin core
Connected to Port:	Multi pin connector on EUT and DC connector on Mains Power Supply Unit

4. Operation and Monitoring of the EUT during Testing

4.1. Operating Modes

The EUT was tested in the following operating mode(s):

- Transmitting at maximum power, with and without a modulated signal on the bottom, middle and top channels as required.

4.2. Configuration and Peripherals

The EUT was tested in the following configuration(s):

- The manufacturer pre-loaded test software/firmware prior to testing. This enabled the EUT to transmit with a 250 kbit/s modulated signal on the bottom, middle or top channels as required.
- The sample with serial number 0002 was used for duty cycle measurements. All other measurements were performed using the sample with serial number 0001.
- The EUT is normally powered by host equipment which can be battery or mains supplied. During all testing the EUT was powered by 3 VDC via a 120 VAC 60 Hz Stontronics power supply. The power supply was connected to the EUT multi-pin connector via a 1.8 metre two core cable.

5. Measurements, Examinations and Derived Results

5.1. General Comments

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to *Section 6. Measurement Uncertainty* for details.

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

5.2. Test Results**5.2.1. Transmitter AC Conducted Spurious Emissions****Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	16 October 2013
Test Sample Serial Number:	0001		

FCC Reference:	Part 15.207
Test Method Used:	ANSI C63.10 Section 6.2 referencing ANSI C63.4

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	46

Note(s):

1. The EUT was connected to the Stontronics power supply. The power supply was connected to a 120 VAC 60 Hz single phase supply via a LISN.
2. Pre-scans were performed and markers placed on the highest live and neutral measured levels. Final measurements were performed on the marker frequencies and the results entered into the tables below.
3. A pulse limiter was fitted between the LISN and the test receiver.

Note(s):

1. The final measured value in the tables below incorporates the calibrated antenna factor and cable loss.
2. The average level was obtained by subtracting the duty cycle correction (2.0 dB) from the previously measured peak level.

5.2.3. Transmitter Duty Cycle**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	25 October 2013
Test Sample Serial Number:	0002		

FCC Reference:	Part 15.35(c)
Test Method Used:	ANSI C63.10 Section 7.5

Environmental Conditions:

Temperature (°C):	24
Relative Humidity (%):	48

Note(s):

1. In order to assist with the determination of the average level of fundamental and spurious emissions field strength, measurements were made of duty cycle to determine the transmission duration and the silent period time of the transmitter. The transmitter duty cycle was measured using a spectrum analyser in the time domain and calculated by $20 \log(\text{On Time} / (\text{Period or } 100 \text{ ms whichever is the lesser}))$:

$$\text{Duty cycle} = 20 \log ((77.217 \text{ ms}) / (97.464 \text{ ms}))$$

$$\text{Duty cycle} = 20 \log (0.79)$$

$$\text{Duty cycle} = 2.0 \text{ dB}$$

5.2.5. Transmitter Radiated Emissions**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	15 October 2013
Test Sample Serial Number:	0001		

FCC Reference:	Parts 15.249(d)(e) & 15.209(a)
Test Method Used:	ANSI C63.10 Sections 6.3 and 6.5 referencing ANSI C63.4
Frequency Range	30 MHz to 1000 MHz

Environmental Conditions:

Temperature (°C):	24
Relative Humidity (%):	38

Note(s):

1. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
2. The preliminary scans showed similar emission levels below 1 GHz, for each channel of operation. Therefore final radiated emissions measurements were performed with the EUT set to the top channel only.
3. All emissions shown on the pre-scan plot were investigated and found to be ambient or >20 dB below the applicable limit or below the measurement system noise floor. Therefore the highest peak noise floor reading of the measuring receiver was recorded as shown in the table below
4. Measurements below 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

Note(s):

1. The final measured value, for the given emission, in the tables below incorporates the calibrated antenna factor and cable loss.
2. The emission shown on the 1 GHz to 4 GHz pre-scan plot is the EUT fundamental at 2481.75 MHz.
3. In accordance with ANSI C63.4 Section 8.3.2.2 NOTE 1, the peak level results complied with the average limit, therefore the average results were not required.
4. All other emissions shown on the pre-scan plot were investigated and found to be >20 dB below the applicable limit or below the measurement noise floor.
5. Pre-scans above 1 GHz were performed in a fully anechoic chamber (Asset Number K0002) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the test chamber floor in the centre of the chamber turntable. All measurement antennas were placed at a fixed height of 1.5 metres above the test chamber floor, in line with the EUT. Final measurements above 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

5.2.6. Transmitter Band Edge Radiated Emissions**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	15 October 2013
Test Sample Serial Number:	0001		

FCC Reference:	Parts 15.249(d) & 15.209
Test Method Used:	ANSI C63.10 Section 6.9.2 and 6.9.3

Environmental Conditions:

Temperature (°C):	22
Relative Humidity (%):	44

Note(s):

1. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
2. *-20 dBc.
3. ** The upper band edge average measurement was performed using ANSI C63.10 Section 6.9.3 marker-delta method. An in-band field strength measurement was initially performed. A second measurement was performed using a reduced RBW of 500 kHz which is 1% of the 50 MHz span. The amplitude delta between the peak of the fundamental emission and the emission level at the upper band edge was noted. The delta was subtracted from the initial in-band field strength level to obtain the upper band edge level. Result plots can be found at the end of this section.

Initial fundamental peak emission level using a RBW/VBW of 1 MHz/10 Hz = 90.2 dB μ V/m

Delta between fundamental and band edge using RBW/VBW of 500 kHz/10 Hz = 45.6 dB μ V/m

Band edge level = 90.2 - 45.6 = 44.6 dB μ V/m

6. Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document "approximately" is interpreted as meaning "effectively" or "for most practical purposes".

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
AC Conducted Spurious Emissions	0.15 MHz to 30 MHz	95%	±4.69 dB
Fundamental Field Strength	2.4 GHz to 2.4835 GHz	95%	±2.94 dB
Occupied Bandwidth	2.4 GHz to 2.4835 GHz	95%	±3.92 %
Radiated Spurious Emissions	30 MHz to 1 GHz	95%	±5.65 dB
Radiated Spurious Emissions	1 GHz to 25 GHz	95%	±2.94 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.
