1 Quick Start

Thank you for buying this product. The following information aims to give you general information about product introduction, product overview and installation procedure and so on.

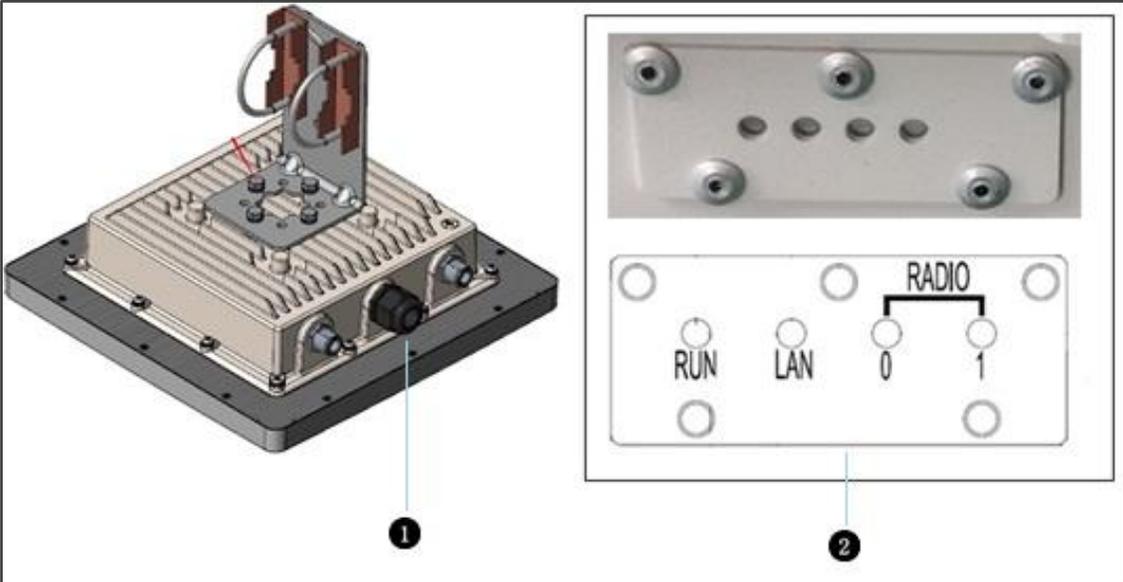

1. Introduction

WF-610 is a dual-band 2x2 outdoor Wi-Fi AP, which is complied with the IEEE802.11n/11ac standard and designed for high-density deployments in offices, schools, hospitals and hotels that require premium performance. Having together MIMO (Multiple-in&Multiple-out) technology with high-throughput mode techniques, WF-610 works with most wireless terminals to builds a high capacity Wi-Fi network.

2. Package List

- AP x1
- L shaped clamp x 1
- Waterproof cover x 1
- Installation packagex 1

3. Product Overview

| No. | Name | Function |
|-----|----------|---|
| 1 | LAN Port | 10/100/1000M Base-T Ethernet port (RJ-45), used as a WAN port and used for being powered by PoE function. |
| 2 | LEDs | See LED Definition |

4. Installation

To reduce the risk of bodily injury, electrical shock, fire, and equipment damage, read all warnings and precautions in this guide before installing or maintaining product.

Caution

 To avoid risk of injury from electrical shock or energy hazard, installation and service of this product must be performed by qualified service personnel.

 Make sure the AP fits securely on the ceiling rail when hanging the device in the ceiling, because poor installation could cause it to fall and make body injury and equipment damage.

Safety Statement

- To avoid the abnormal work, do not install the device near the power line, electric lamp, power grid, or in any forceful power grid place
- Ensure the power adapter is grounded well if install the device indoor.
- Install other lightning protection equipment near the device if necessary, because the lightning protection module inside the device is basic.
- Use the steady power grid to provide the power to the device, which is to avoid the abnormal work.
- Use a less than 50m network cable to connect the PoE port, which is to acquire the steady power. The network cable complies with the DC resistance definition in the YD/926.2 protocol.

Installation Environment

- Operating ambient temperature: $-40^{\circ}\text{C} \sim +65^{\circ}\text{C}$
- Operating ambient humidity: 5% ~ 95%non-condensing

Installation mode:

- Pole mounting

Installation tool:

- Screws, screw-driver and wrench

Installation site:

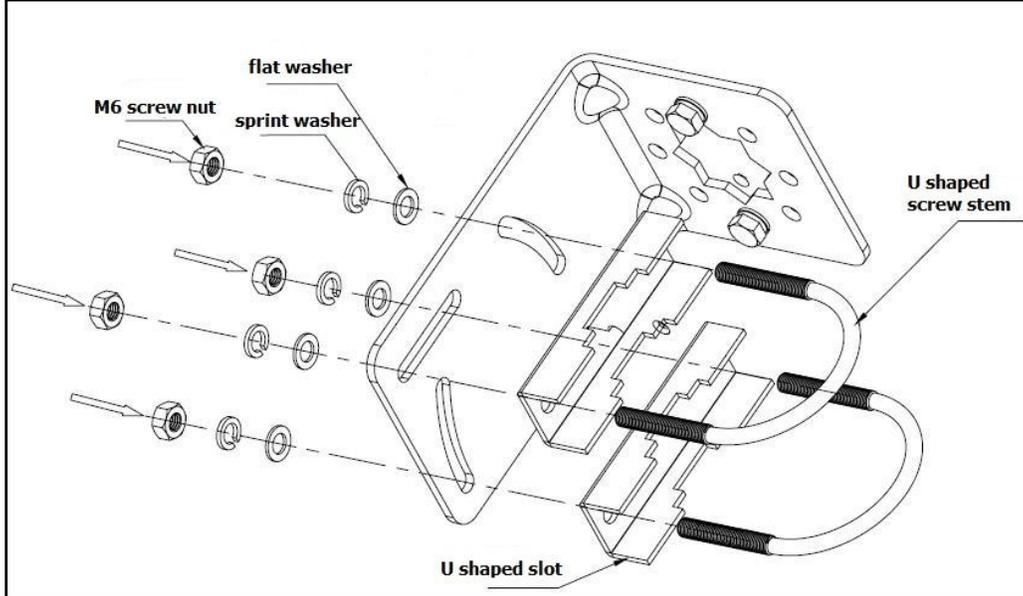

- Please ensure the visibility of product and no tall buildings and woods block between them.

Installation procedure

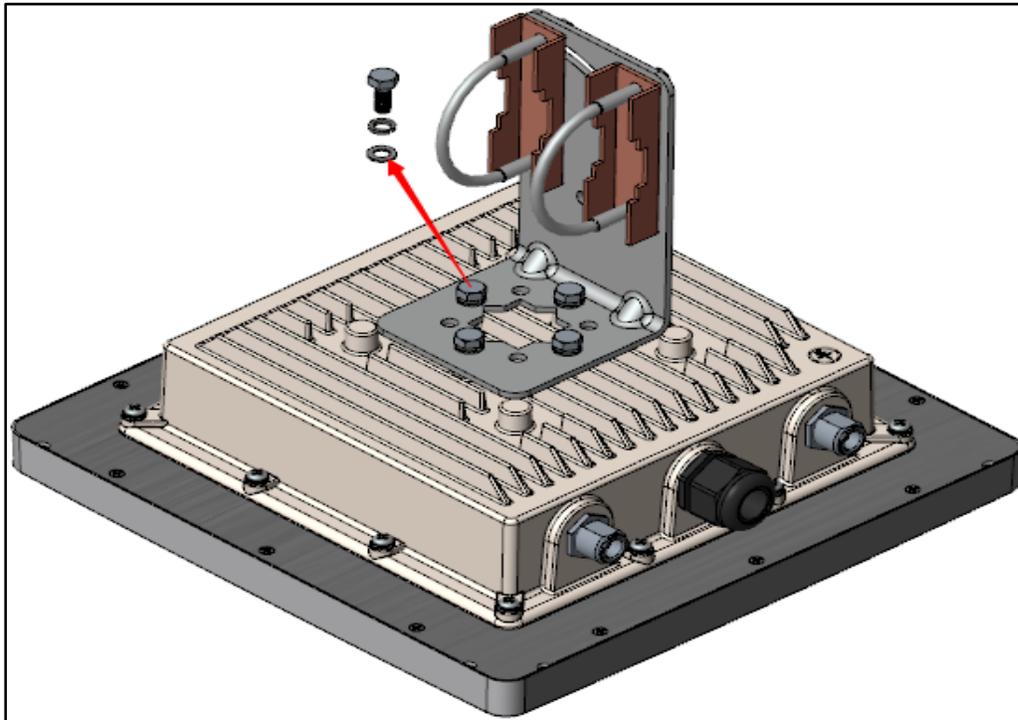

Pole mounting

1. Firstly install the L shaped clamp, with M6 screw nut, spring washer and flat washer. Four screws need be installed.

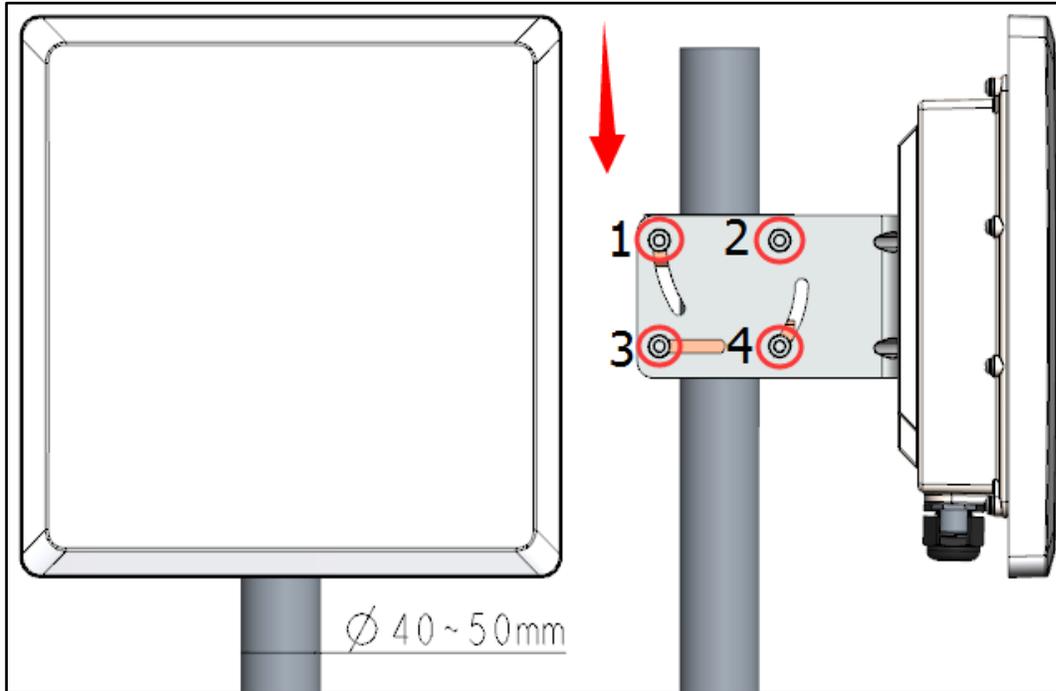

- Put the U shaped screw stem and U shaped slot into the hole. And then drive the M6 crew nut and M6 washer.

- Install the clamp on the back of WF-610, with M6*12 screw bolt, M6 spring washer and M6 flat washer. Four screw bolts need be installed.
- Input M6*12 screw bolt and M6 washer into the hole on the back and drive them.

- Finally mount WF-610 on the pole as shown in the picture. And drive the screw nut tight with wrench.

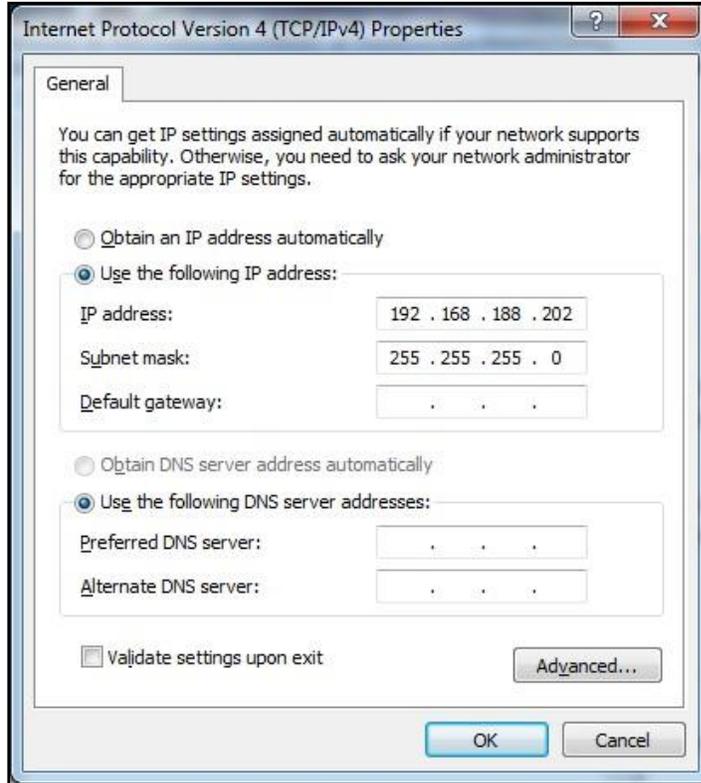

5. LED Definition

| LED | Function | State-Color | Indication |
|-----|-------------------------|----------------|-------------------------------------|
| RUN | AP power / ready status | Steady - Green | AP is ready |
| | | Red | AP hardware failure |
| | | Off | No power to AP |
| LAN | Network Link Status | Steady - Green | 1000Mbps Ethernet link negotiated |
| | | Steady- Yellow | 10/100Mbps Ethernet link negotiated |
| | | Flashing | Ethernet link activity |
| | | Off | Ethernet link unavailable |
| 0 | 5G Hz Radio Status | Steady- Green | 5GHz radio is enabled |
| | | Off | 5GHz radio is disabled |
| 1 | 2.4G Hz Radio Status | Steady- Green | 5GHz radio is enabled |
| | | Off | 5GHz radio is disabled |

6. Software Installation

Logging in to the Web Page

1. To configure PC IP address, fill 192.168.188.x in "IP address" and 255.255.255.0 in "Subnet mask" (set Window7 as an example to show the properties)

2. Input the default IP address 192.168.188.251 in the address bar of the web browser and press Enter.
3. Enter username and password (username: admin, password: password), after password authentication is successful, the web page is displayed.

7. Product Specification

Physical specification

| | |
|---------------------------|--------------------------------------|
| Dimensions | 216.2mm x 216.2 mm x 71mm(L x W x H) |
| Weight | 3.0kg |
| LED | RUN/ LAN/ RADIO 0/ RADIO 1 |
| Ethernet interface | RJ-45 connector |

Electrical specification

| | |
|--------------------------|----------------------|
| Power input | Standard 802.3at PoE |
| Power consumption | ≤12.33W |

Environmental specification

| | |
|----------------------------|-------------------------|
| Working temperature | -40℃ ~ +65℃ |
| Working humidity | 5% ~ 95% non-condensing |
| Elevations | 86kPa~106kP0061 |

| | |
|--------------------------|-----------------------|
| Dustproof and waterproof | IP67 |
| Lightning protection | 6KV common mode surge |

8. Product Proper Disposal

Waste of Electrical and Electronic Equipment

Directive 2002/96/EC on Waste of Electrical and Electronic Equipment are designed to tackle the fast increasing waste stream of electrical and electronic equipment and complements European Union measures on landfill and incineration of waste. CIG products at end of life are subject to separate collection and treatment in the EU Member States and therefore are marked with the symbol.

European Union RoHS

EU Restriction and Hazardous Substances Directive 2011/65/EC (RoHS) restricts the use of specific hazardous materials in manufacture of electrical and electronic equipment. Specially, restricted materials are Lead, Cadmium, Mercury, Hexavalent Chromium, and Bromine. CIG products comply with this requirement and all marked with "RoHS" shown at the left.

China RoHS

WF-610 complies with China environmental declaration requirements and is labeled with "EFUP 20" label shown as follows.

有毒有害物质声明

Hazardous Materials Declaration

| 部件名称 (Parts) | 有毒有害物质或元素 (Hazardous Substance) | | | | | |
|------------------------------------|---------------------------------|-----------|-----------|---------------|---------------|-----------------|

Note that some of the component types listed above may or may not be a part of the enclosed product.</p> | | | | | | |

除非另外特别的标注，此标志为针对所涉及产品的环保使用期标志。某些零部件会有一个不同的环保使用期贴在其产品上。此环保使用期限只适用于产品是在产品手册中规定的条件下工作。
The Environment-Friendly Use Period (EFUP) for all enclosed products and their parts are per the symbol shown here, unless otherwise marked. Certain parts may have a different EFUP and so are marked to reflect such. The Environment-Friendly Use Period is valid only when the product is operated under the conditions defined in the product manual.

9. Safety and Regulatory compliance

WF-610 has been tested and complied with the standards as follows:

- FCC DOC Part 15 Class B (US)
- FCC Part 15 Subpart C 15.247 (US)
- FCC Part 15 Subpart E 15.407 (US)

10. FAQs

| FAQ | Solution |
|--------------------------|--|
| The RUN indicator is off | Check that the power adapter is plugged into a live AC outlet. |
| | Check the power cable for shorts or breaks. |

| FAQ | Solution |
|--------------------------------|--|
| | Check whether the connection between the LAN/POE port of the combiner and the LAN/POE port is correct. |
| The LAN port indicator is off. | Check whether the connection between the LAN/POE port of the combiner and the LAN/POE port is correct. |

11. Technical Support

CIG offers technical support 24 hours a day, 7 days a week. Use one of the following methods to contact CIG technical assistance center:

1.1 Connect PoE Adapter to WF-610

Notes: Now WF-610 can be powered by standard 802.3af or 802.3at PoE PSE. Please connect the Ethernet Port labeled “PWR LAN-OUT” on PoE Adapter to “ETH” port of WF-610 and the Ethernet Port labeled “LAN-IN” on PoE Adapter to your PC or Switch.

1.2 Configure PC's IP Address

Notes: Connect your PC to the "LAN-IN" port on PoE Adapter of WF-610, manually configure your wired NIC with a static IP address on the 192.168.188.x subnet (e.g. 192.168.188.202).

1.3 Visit WF-610 Web Page

Overview

| | |
|------------------|------------------------------|
| Device Name | 2x2 Dualband Outdoor AP |
| Location | Shanghai |
| Device Model | WF-610 |
| Device SN | CIGG0123456 |
| Hardware Version | 80020101 |
| Software Version | R2.0.03.040 |
| Working Mode | FAT AP |
| PoE Type | Standard |
| CPU Utilization | 3.0% |
| Up Time | 0 Hours 1 Minutes 39 Seconds |

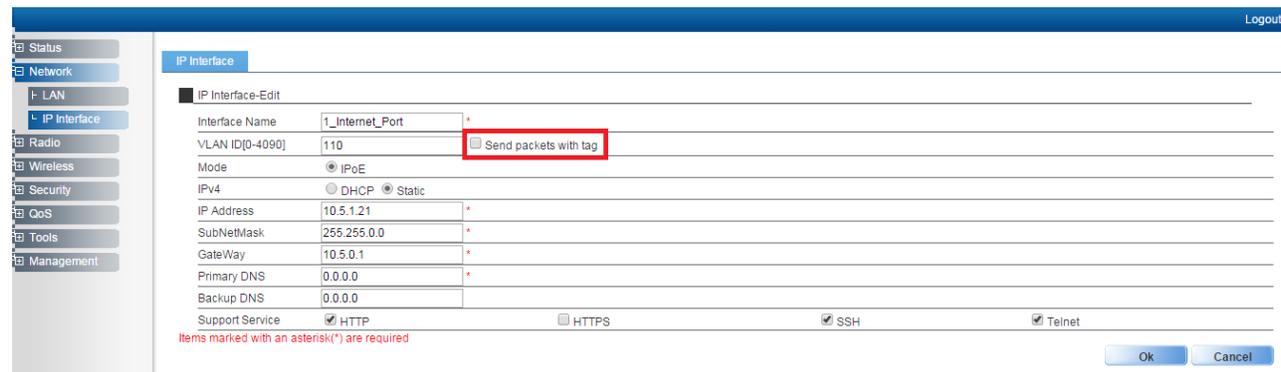

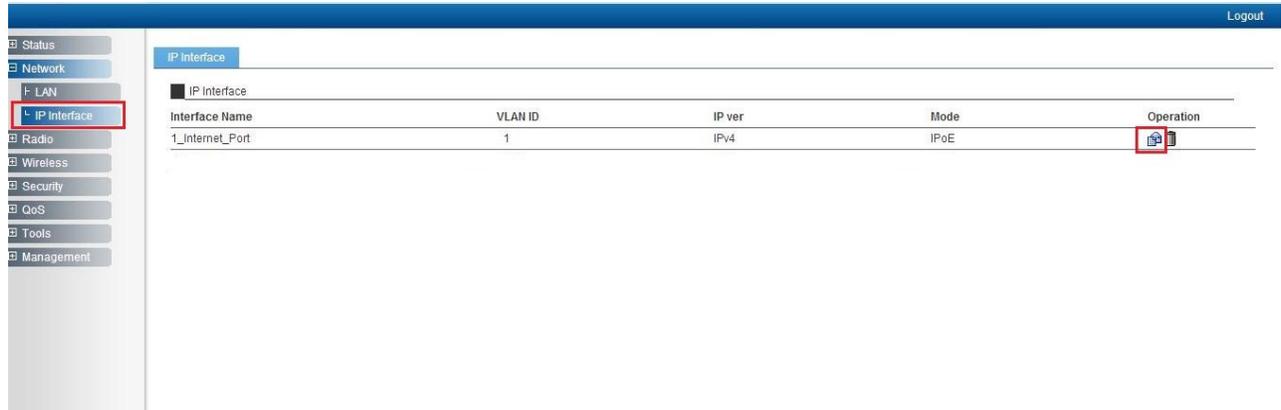

IP Interface

| Interface Name | VLAN ID | IPv4 Address | State |
|-----------------|---------|-----------------|-------|
| 1_Internet_Port | 1 | 192.168.188.251 | UP |

Notes: Input the default IP address "192.168.188.251" in the address bar of browser. Then enter the

default username and password (username: admin, password: password) to enter the Web interface of AP.

1.4 Configure Management Interface for WF-610

Notes: You can configure management IP/subnetmask/gateway/DNS here. By default, packets are sent without tag. Packets can be sent with tag by selecting the option as shown in the figure.

1.5 Connect WF-610 to Switch

Notes: Connect WF-610 to Switch and confirm it can visit Internet, then configure your PC to the same subnet and connect to the same Switch in order to continue to configure the WF-610.

1.6 Configure Location, Language

The screenshot shows the 'System' configuration page. The 'Region Code' section is highlighted with a red box, containing the following fields:

| | |
|--------------|----------------------|
| Device Name | 2x2dualbandoutdoorap |
| Location | Shanghai |
| Language | English |
| Country Code | US |

Other sections include:

- NAS ID:** NAS ID: WF-610_CiGWw3800155
- Factory Defaults:** Restore Factory Configuration (Restore button)
- Configuration Management:** Backup Configuration (Save... button)

Notes: The country code is US and can't be modified.

1.7 Configure Security Profile for Different Authentication Types

1.7.1 WEP

The screenshot shows the 'Security' configuration page. The 'Security' menu item in the left sidebar is highlighted with a red box. The main area shows a table with columns 'Profiles Name', 'Security Type', and 'Operation'. An 'Add' button is highlighted with a red box.

WEP-OPEN:

The screenshot shows the 'Security-Edit' configuration page. The 'Security-Edit' section is highlighted with a red box, showing the following fields:

| | |
|-----------------------|---------|
| Security Profile Name | WEP |
| Security Type | WEP |
| Authentication Type | Open |
| WEP Key Length | 64 bits |
| WEP Key Type | ASCII |
| WEP Key | 11111 |
| WEP Key Index | 1 |

Items marked with an asterisk (*) are required.

WEP-Shared Key:

The screenshot shows the 'Security' configuration page in a network management system. The left sidebar contains a tree view with 'Security' selected. The main area is titled 'Security-Edit' and contains the following fields:

| | |
|-----------------------|------------|
| Security Profile Name | WEP |
| Security Type | WEP |
| Authentication Type | Shared Key |
| WEP Key Length | 64 bits |
| WEP Key Type | ASCII |
| WEP Key | 11111 |
| WEP Key Index | 1 |

Items marked with an asterisk(*) are required

Buttons: Ok, Cancel

1.7.2 WPA2-PSK

The screenshot shows the 'Security' configuration page in a network management system. The left sidebar contains a tree view with 'Security' selected. The main area is titled 'Security-Edit' and contains the following fields:

| | |
|-----------------------|----------|
| Security Profile Name | WPA2 |
| Security Type | WPA2 |
| Authentication Type | PSK |
| Encryption | AES/TKIP |
| WPA Preshared Key | 12345678 |

Items marked with an asterisk(*) are required

Buttons: Ok, Cancel

Notes: With parameter "Encryption", you can select AES, TKIP or AES/TKIP.

1.7.3 WPA/WPA2-PSK

The screenshot shows the 'Security' configuration page in a network management system. The left sidebar contains a tree view with 'Security' selected. The main area is titled 'Security-Edit' and contains the following fields:

| | |
|-----------------------|----------|
| Security Profile Name | WPA/WPA2 |
| Security Type | WPA/WPA2 |
| Authentication Type | PSK |
| Encryption | AES/TKIP |
| WPA Preshared Key | 12345678 |

Items marked with an asterisk(*) are required

Buttons: Ok, Cancel

Notes: With parameter "Encryption", you can select AES, TKIP or AES/TKIP.

1.7.4 802.1X /EAP

If want to use the 802.1x authentication, it need to configure the Radius profile firstly. Then in the security profile, the radius profile will be cited by security profile.

Notes: Security type can be WPA2 or WPA/WPA2.

1.7.5 WEB/MAC

WF-610 supports Web/MAC authentication. If you want to use the Web/MAC authentication, it needs to configure the Portal profile and Radius profile firstly. Then in the security profile, the Portal profile and Radius profile will be cited. Above all, you need to setup a portal server and radius server.

Notes: MAC and WEB authentication have the same configuration. After receiving auth request from station, WF-610 will firstly start MAC auth. If MAC auth is failed, WF-610 will change to WEB auth.

Items marked with an asterisk(*) are required.

Delete

Ok Cancel

2.6 Configure Group ID (Optional)

Notes: Group profile is used for 802.1x/Web/MAC authentication. Group is classified by Filter-ID attribute in radius access accept message. The Group is bound with the role of the user. Different group has different VLAN and rate limit configuration. When a station sends the username and password to the Radius server for authentication, the server can respond with a Filter-ID (optional) to the AP. After getting the Filter-ID attribute, AP will search the Filter-ID in the Group profiles. If the

Filter-ID can be matched with one profile, the traffic VLAN and rate limit will be applied to the station. The Group profile is applied in the Radius server profile.

The screenshot shows the 'Group ID' configuration page. On the left is a navigation menu with 'Group ID' highlighted. The main content area is titled 'Group ID' and contains the following sections:

- Group ID - Edit:** Profile Name: CIGUSER *
- Group ID Rules - Edit:** Group ID: RD, VLAN ID: 110, Egress Method: Fix, Egress Rate: 400 kbps. An 'Add' button is present.
- Group ID Rules List:** A table with columns: Group ID, VLAN ID, Egress Rate, and Select.

| Group ID | VLAN ID | Egress Rate | Select |
|----------|---------|-------------|--------------------------|
| RD | 110 | Fix_400kbps | <input type="checkbox"/> |

Buttons at the bottom right include 'Delete', 'Ok', and 'Cancel'. A note at the bottom left states: 'Items marked with an asterisk(*) are required.'

The screenshot shows the 'Radius-Edit' configuration page. On the left is a navigation menu with 'Radius' highlighted. The main content area is titled 'Radius-Edit' and contains the following sections:

- Radius Profile Name:** CIG *
- Group ID Profile:** CIGUSER (highlighted with a red box) with a 'Detail...' button.
- Radius Interface:** 1_Internet_Port with a 'Detail...' button.

| | Max data rate N | Auto |

Note: Enable WDS function too when you configure CPE to connect to AP.

3 WDS Bridge Mode

3.1 WDS Bridge Network Topology

3.2 Enable WDS Bridge Mode

The screenshot shows the 'Basic' configuration page for WDS Bridge. The 'Service Mode' is set to 'WDS Bridge'. The 'Channel' is set to '161'. The 'Radio Mode' is set to '802.11ac'. The 'Guard Interval' is set to 'Enable Short GI'. The 'Spatial Stream' is set to '2'. The 'Aggregation' is set to 'AMPDU'. The 'Auto Adjust to EIRP Limit' is checked. The '802.11ac' section is expanded, showing '802.11ac only' is unchecked, 'Spatial Stream' is '2', 'Aggregation' is 'AMPDU', and 'Guard Interval' is 'Enable Short GI'. The 'HT20', 'HT40-', and 'HT80' radio modes are also visible.

Note: Please select a specified Channel (for example 161) here.

3.3 Input Remote AP MAC

The screenshot shows the 'WDS Bridge' configuration page in the management interface. The 'Radio' is set to '5G'. The 'NAWDS Auto Find' is checked. The 'Remote WDS MAC0' is set to '00:19:c7:cb:ad:ea'. The 'Remote WDS MAC1' through 'Remote WDS MAC7' are all set to '00:00:00:00:00:00'. The 'VLAN Mode' is set to 'Access'. The 'PVID' is set to '1'. The 'Pri' is set to '0'. The 'Security Profile' is set to 'NULL'. The 'RateLimit Profile' and 'MAC ACL Profile' are both set to 'NULL'. The 'Detail...' buttons are visible next to the 'Security Profile', 'RateLimit Profile', and 'MAC ACL Profile' fields.

Note: Security profile can be cited here, but only WEP auth and OPEN are supported for WDS bridge mode.

3.4 Configuration on Remote AP

The screenshot shows the configuration page for a Remote AP. The left sidebar contains navigation options: Status, Network, Radio, Wireless, Security, QoS, Tools, and Management. The main content area is titled 'Basic' and includes the following settings:

- Radio: (checked)
- Service Mode: WDS Bridge (highlighted with a red box)
- TX Power: 21 dBm
- Radio Mode: 802.11 ac
- Channel: 161
- Radio Mode Selection:
 - HT20
 - HT40-
 - HT80
- Auto Adjust to EIRP Limit:
- 802.11ac:
 - 802.11ac only:
 - Spatial Stream: 2
 - Aggregation: AMPDU
 - Guard Interval: Enable Short GI

Buttons for 'Ok' and 'Cancel' are located at the bottom right.

Note: Please select the same channel. For the WDS bridge mode, two APs should use the same channel and security encryption.

The screenshot shows the 'WDS Bridge-Edit' configuration page. The left sidebar includes: Status, Network, Radio, Wireless, AP, Station, WDS Bridge, Security, QoS, Tools, and Management. The main content area includes the following settings:

- Radio: 5G
- NAWDS Auto Find: Enable
- Remote WDS MAC0: 00:19:c7:cb:5d:12
- Remote WDS MAC1: 00:00:00:00:00:00
- Remote WDS MAC2: 00:00:00:00:00:00
- Remote WDS MAC3: 00:00:00:00:00:00
- Remote WDS MAC4: 00:00:00:00:00:00
- Remote WDS MAC5: 00:00:00:00:00:00
- Remote WDS MAC6: 00:00:00:00:00:00
- Remote WDS MAC7: 00:00:00:00:00:00
- VLAN Mode: Access
- PVID: 1 (0-4090)
- Pri: 0 (0-7)
- Security Profile: NULL (Detail...)
- RateLimit Profile: NULL (Detail...)
- MAC ACL Profile: NULL (Detail...)

A red note at the bottom states: 'Items marked with an asterisk(*) are required'. Buttons for 'Ok' and 'Cancel' are at the bottom right.

Note: Please input the MAC address of AP which you want to connect via WDS.

3.5 NAWDS Auto Find

WF-610 also supports “NAWDS Auto Find” function. Input the MAC address of the slave AP on the master AP. Then enable “NAWDS Auto Find” function in slave AP without inputting the MAC address.

Slave AP configuration:

Basic Advance

Basic

Radio

Service Mode **WDS Bridge**

TX Power 21 dBm

Radio Mode 802.11 ac

Channel 161

HT20 HT40 HT80

802.11ac:

802.11ac only

Spatial Stream 2

Aggregation AMPDU

Guard Interval Enable Short GI

Ok Cancel

Notes: Please select the same Channel as that of AP which you want to connect via WDS.

Logout

NAWDS Auto Find Enable

VLAN Mode Access

PVID 1 (0-4090)

Pri 0 (0-7)

Security Profile NULL Detail...

RateLimit Profile NULL Detail...

MAC ACL Profile NULL Detail...

Items marked with an asterisk(*) are required

Ok Cancel

Notes: After you enable "NAWDS Auto Find" function, the AP will connect to the master AP via WDS automatically.

4 Status

4.1 Overview

You can check some summary info here, for example, software version, ip interface and radio configuration.

Overview

| | |
|------------------|-------------------------------|
| Device Name | 2x2 Dualband Indoor AP |
| Location | Shang |
| Device Model | test |
| Device SN | CIGGf0123456 |
| Hardware Version | 80010101 |
| Software Version | R2.0.03.040 |
| Working Mode | FAT AP |
| PoE Type | Standard |
| CPU Utilization | 3.0% |
| Up Time | 3 Hours 12 Minutes 16 Seconds |

IP Interface

| Interface Name | VLAN ID | IPv4 Address | State |
|-----------------|---------|-----------------|-------|
| 1_Internet_Port | 1 | 192.168.188.251 | UP |
| 1_portal_if | 4091 | 192.168.91.1 | UP |

Radio

| | | |
|----------------|----------|----------|
| Type | 2.4G | 5G |
| Radio | Enable | Enable |
| Radio Mode | 802.11 n | 802.11 n |
| Service Mode | AP | AP |
| Bandwidth Mode | 20M | 20M |

4.2 Radio

In this page, you can see service mode for radio 2.4G is AP mode. There is only one SSID “2g_ssid1” with BSSID 00:00:11:11:11:10 and totally two stations are connected to this radio. Information will be updated by clicking “Refresh” button. For radio 5G, you can open “status”-“Radio 5G” to check detailed information.

Something to mentioned, detailed information about station (e.g. auth type/MAC/online time/TX bytes/RX bytes) exists in “station list”.

Radio2.4G

Overview

| | |
|------------------|-----------|
| Radio | Enable |
| Radio Mode | 802.11 n |
| Service Mode | AP |
| Bandwidth Mode | 20M |
| Channel | 11(Auto) |
| Transmit Power | 20 dbm |
| Recv Noise Floor | 0 dbm |
| Receive Packets | 135 pkts |
| Transmit Packets | 1151 pkts |

|----------|-----------|-------------|-------------------|-------------|----------|----------|
| 2g_ssid1 | Open | Connected | 00:19:c7:fe:12:10 | 11773 | 0 | 0 |
| 2g_ssid1 | Open | Connected | c0:38:96:97:8f:cd | 7 | 1966 | 0 |

5 Management

5.1 Backup/Import Configuration

The screenshot shows the 'System' configuration page. The left sidebar has 'Management' and 'System' highlighted. The main content area is divided into several sections:

- Region Code:** Device Name: 2x2 Dualband Indoor AP; Location: Shanghai; Language: English; Country Code: US. Buttons: Ok, Cancel.
- NAS ID:** NAS ID: WF-180_CIGWe3600043. Buttons: Ok, Cancel.
- Factory Defaults:** To restore a default setting, click on the "Restore" button below. Restore Factory Configuration button: Restore.
- Configuration Management:** Backup Configuration button: Save...; Specify the name and location of the file used to import the configuration. Import File name: choose file; No file chosen; Upload button: Upload.
- Reboot Device:** To reboot the gateway, click on the "Reboot" button below. Reboot button: Reboot.

Notes: Press "Save" button to save current configuration. If you want to import one new configuration file, please click "choose file" to select the new file and then press "Upload" button to upload. After that, WF-610 will reboot.

5.2 Software Upgrade

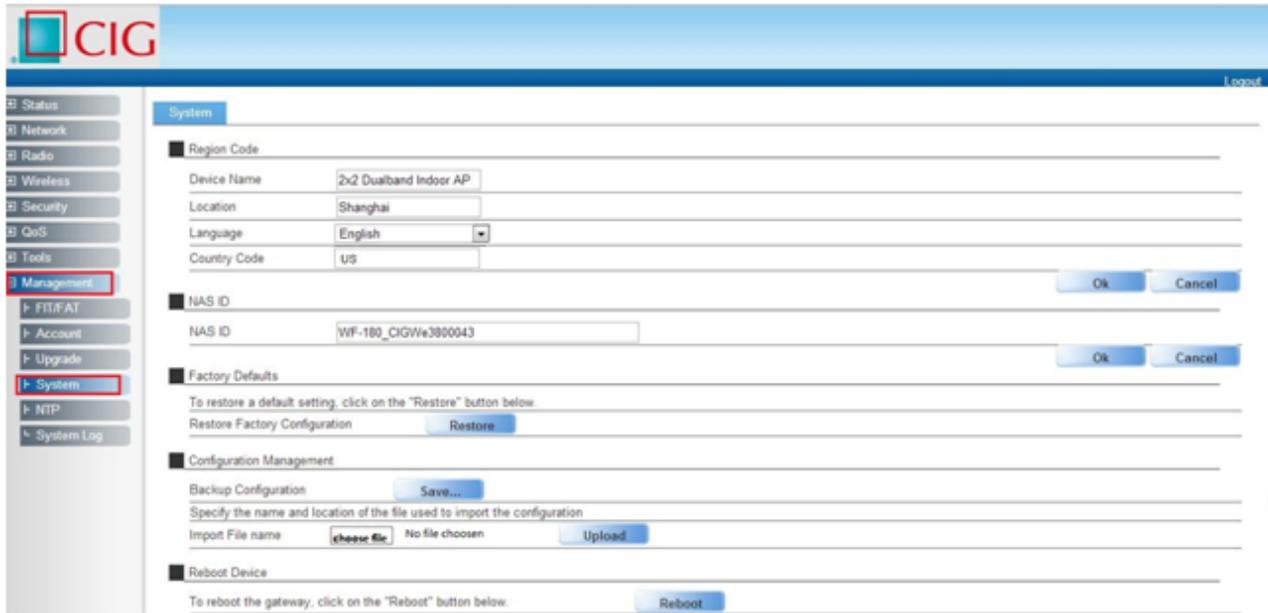

The screenshot shows the 'Upgrade' page. The left sidebar has 'Management' and 'Upgrade' highlighted. The main content area is titled 'Upgrade Software Image' and contains:

- Current Firmware Version: R1.2.02.003
- Downloaded file: Choose File; No file chosen
- Upgrade button: Upgrade

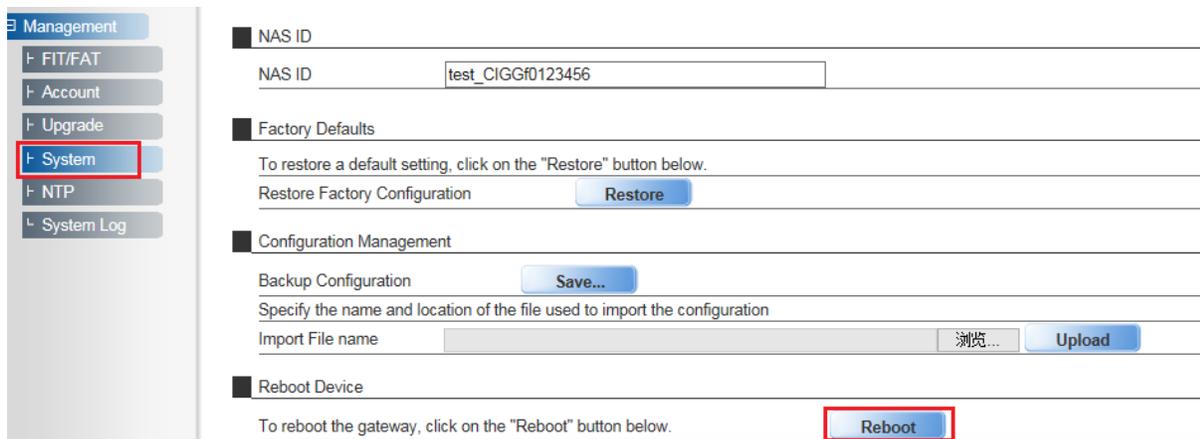

Notes: Press "Choose File" button to select firmware file that you want to upgrade, then press "Upgrade" button to upgrade.

5.3 Factory Reset via WEB

Click "Restore" button to do factory reset. All of the configuration will be restored to default.

5.4 Reboot via WEB

5.5 Factory Reset via Sending Special Packet

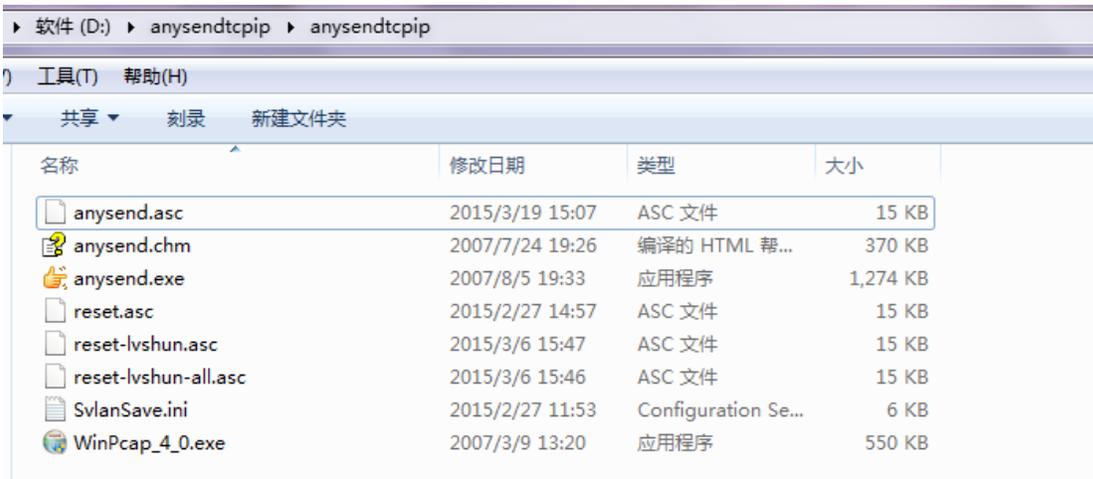

WF-610 has no reset button. If you forget WF-610's IP, you can use a simple tool—`anysendtcpip` to execute factory reset via sending special packet. After that, you can telnet WF-610 with default IP 192.168.188.251.

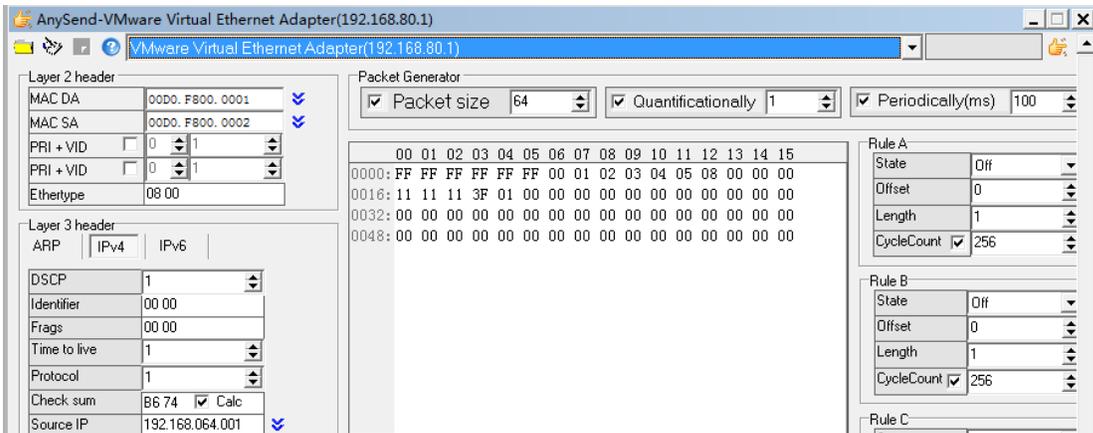

`anysendtcpip.rar`

5.5.1 Factory Reset One Single Device

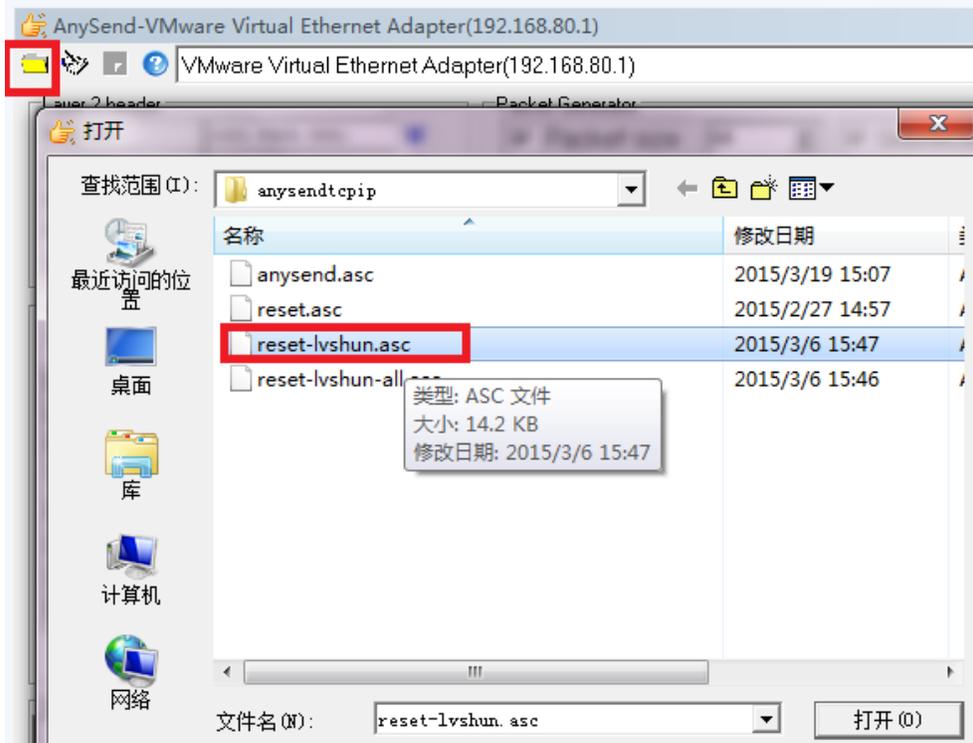

Open file folder<`anysendtcpip`>.

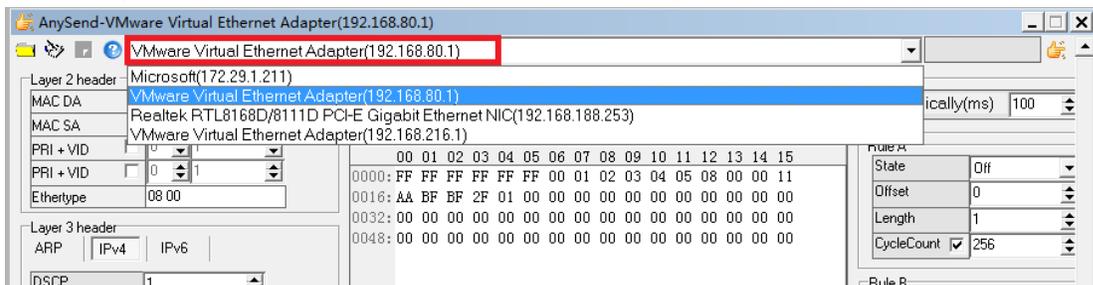

Double click anysend.exe.

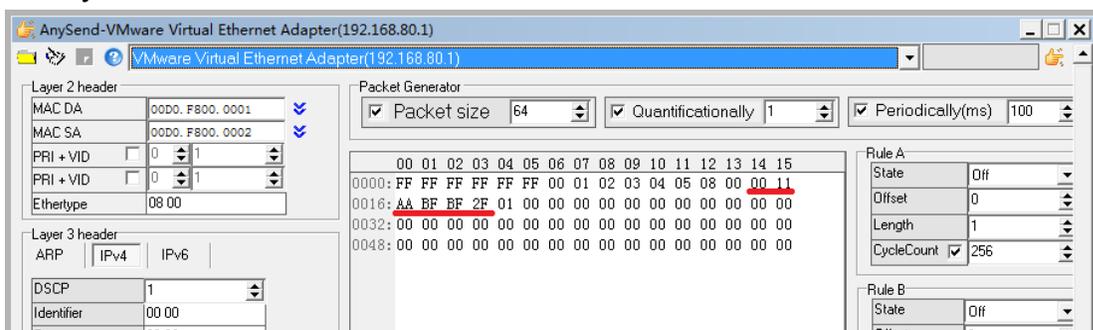

Click the yellow icon located top left corner , and select <reset-lvshun.asc>.

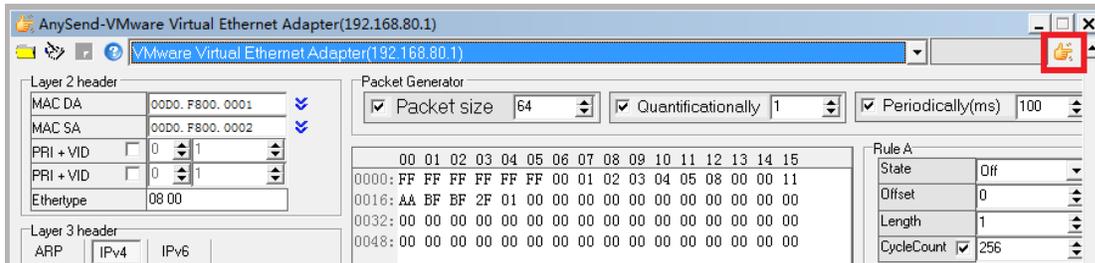

Select right network card which is used to send packet.

Modify the MAC address marked in red to be WF-610's MAC with which you want to do factory reset.

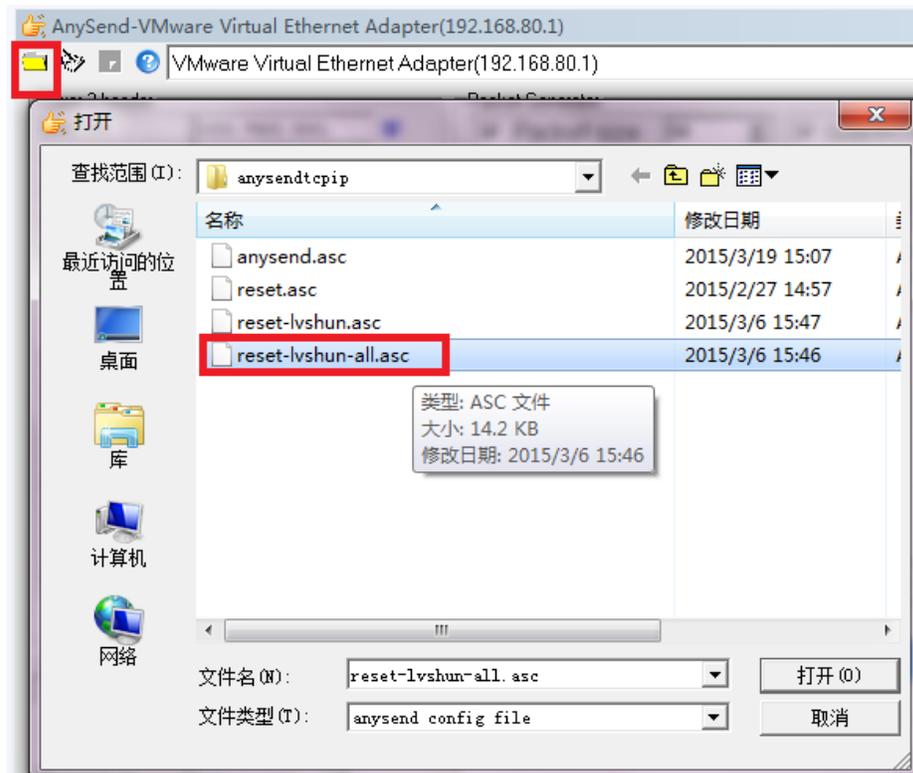

Click the yellow icon located top right corner, then it will start to send special broadcast packet. After devices receive the packet, they will check if it matches with their own MAC. If it does, device will execute factory reset. If not, device will do nothing.

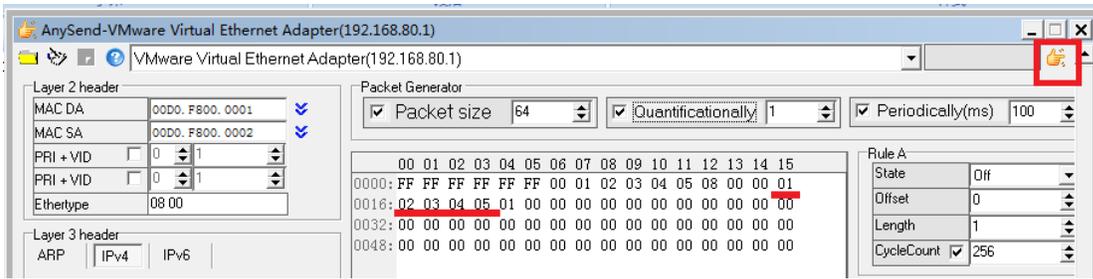

5.5.2 Factory Reset All Devices

Select and open <reset-lvshun-all.asc>.

Here you can see one special default MAC address marked in red color which is 00:01:02:03:04:05. You don't need to modify it. Select the right network card and click the yellow icon to send packet. After devices receive the packet, they won't check if it matches with their own MAC, and directly execute factory reset.

6 Troubleshooting

6.1 Ping Diagnose

Log

6.3 LED Definition

LEDs are defined as follows:

| Label | Function | LED mode | Status |
|------------|--|-------------|---------------------------|
| RUN | AP power / ready status | Off | No power to AP |
| | | Red | Device hardware failure |
| | | On - Green | Device ready |
| LAN | Ethernet Network Link Status / Activity (HW Control) | Off | Ethernet link unavailable |
| | | On - Yellow | Link speed 10/100M |
| | | On - Green | Link speed 1G |
| | | Flashing | Ethernet activity |
| 5G Radio | 5G Hz Radio Status | Off | 5G Hz radio disabled |
| | | On - Green | 5G Hz radio enabled |
| 2.4G Radio | 2.4G Hz Radio Status | Off | 2.4G Hz radio disabled |
| | | On - Green | 2.4G Hz radio enabled |

6.4 Debug via Telnet

You can debug WF-610 via Telnet.

Federal Communications Commission (FCC) Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generate, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

RF exposure warning

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 118.97 cm from all persons and must not be collocated or operating in conjunction with any other antenna or transmitter.
