

Debugging tips

- Check the receiver again, and make sure it is connected to the USB port.
- Check the battery direction should be correct.
- Put the "on-off" button to "on".
- Check the battery capacity.
- Reduce the distance of the receiver and the mouse.
- Re-establish the mouse and the receiver communication channel.

TO CREATE VALUE FOR OUR CUSTOMERS

Wireless Mouse

M618GL 10M Effective Distance

Features

- 2.4G wireless technology, 16 channel intelligent frequency.
- Intelligent low-voltage indicator function.
- Advanced laser engine, accurate location, fast and flexible.
- With ON/OFF switch, OFF mode would save power.
- Intelligent power-saving mode, prolong the battery time.

Tips:

- Please take out the batteries if you do not use the wireless mouse for long time, and keep them in a cool and dry place.
- Please do not use the battery if leaking, discoloration, distortion or other abnormality happens.

Battery installation

1. Open the battery cover
2. Put battery in correct direction
3. Cover the battery cover

In order to achieve the best economical effect, the intelligent power saving technology is adopted. When your mouse stops moving, it will switch to the power-saving mode automatically. If your mouse stops working for about 8 minutes, it will enter the deep power-saving mode, which costs little battery.

Tips:

Keep the ON/OFF switch on OFF mode if you do not use the mouse for a long time. It will save more power to use the mouse on light color media than the dark one.

Connection of the receiver

Connecting the receiver to the PC by the USB port, for desktop, USB extending port or front-set USB port is better. When receiver plugs into USB port, computer would detect the device automatically. Mouse could work normally with ON mode. If the mouse couldn't work normally, should build up connections between the mouse and receiver.

Building up connection between the mouse and receiver

Take the receiver from USB interface of the computer and then re-put the receiver into the USB interface. It will take the receiver 30 seconds to get connection. Put the mouse within 10cm away from the receiver. Slide the power switch to OFF mode and keep pressing the middle key for a few seconds (if middle key is under the roller wheel, it is acceptable to press the roller wheel.) . Slide the power switch to ON mode. After 3 seconds, when indicator LED lights for a few seconds, release the middle key. If the connection is successfully built, indicator LED will go out and the mouse is workable. If not, please repeat the above steps.

Working Environment

- The radio signal can penetrate lignin, glass and other the non-metallic objects, realizing 360 degree free transmit, however, it can not penetrate the metal materials. So please not put the mouse, keyboard and the receiver onto the metallic tabletop. The ideal distance is above 20 CM.
- Please be sure there is no big metal between the mouse and receiver, otherwise the connection will be affected; for desktop, USB extending port or front-set USB port is better.
- The receiver should be far away from the monitor, outside disc driver or other electronic products. 20 CM distance is suggested in order to prevent the radio disturbance produced by other electronic products.
- Laser mouse is suitable for operating media wooden, paper or cloth, but not for the lens cover, such as glass and smooth rubber. A mouse pad is needed in such environment.
- The standardized receiving distance we offered is under certain radio disturbance environment, the normal environment are better, the actual receiving distance is higher than standardized, but if mix-machine, motor, electric drill and other strong electronic equipments operating nearby, which may lead to slowly receiving or other abnormality.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device must not be co-located or operating in conjunction with any other antenna or transmitter. Operation is subject to the following two conditions:

- (1) this device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

Caution!

The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user authority to operate the equipment.
