Product:	Symphony in B. Model No.: BX1977Z		
		Sample No:	(5220)234-0059
		Test Date(s):	September 07, 2020 to September 16, 2020
		Test Requested:	FCC Part 2 (section 2.1093)
		Test Method:	KDB 447498 D01 IEEE C95.1
		FCC ID:	SLURF1356BX1977Z
The results given in this report are related to the tested specimen of the described electrical apparatus.			
CONCLUSION: The submitted sample was found to COMPLY with requirement of FCC Part 2.

Measurement Uncertainty:

MEASUREMENT	FREQUENCY	UNCERTAINTY
Radiated emissions	30MHz to 200MHz	±5.2dB
	200MHz to 1GHz	±6.1dB
	1GHz to 8.2GHz	±4.9dB
	8.2GHZ to 12.4GHz	±4.3dB
	12.4GHz to 18GHz	±4.6dB

Remarks: -

N/A: Not Applicable or Not Available

Measurement uncertainty is calculated in accordance with CISPR 16-4-2.

The statement of compliance is based on a 95% coverage probability for the expanded uncertainty of the measurement result using a coverage factor $k = 2$.

Compliance is based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

TEST REPORT No: (5220)234-0059

Description of EUT Operation:

The Equipment Under Test (EUT) is a **BRANFORD LIMITED** of RFID toy. The transmitter with 13 Tags is operating at 13.56 MHz. The transmitter continues to transmit when buttons is turn to ON and the Passive Tags provoked the signal transmission when the transmitter track on them. Modulation by IC, and type is amplitude modulation.

The transmitter has different control:

1. Play song control – play the next song
2. Demo – play a loop of songs
3. Volume control – control the volume
4. Tempo control – control the tempo
5. Stop song control – stop the song
6. On/Off switch – control power on/off

Antenna Requirement (Section 15.203)

The EUT is use of a permanently antenna. The antenna consists of 50cm long signal. It is soldered on the PCB. The antenna is not replaceable or user serviceable. The requirements of S15.203 are met. There are no deviations or exceptions to the specifications.

Photo of Antenna

TEST REPORT No: (5220)234-0059

RF EXPOSURE EVALUATION

- a) For 100 MHz to 6 GHz and test separation distances ≤ 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following:
[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] $\cdot [\sqrt{f(\text{GHz})}] \leq 3.0$ for 1-g SAR, and ≤ 7.5 for 10-g extremity SAR, where
- $f(\text{GHz})$ is the RF channel transmit frequency in GHz
 - Power and distance are rounded to the nearest mW and mm before calculation
 - The result is rounded to one decimal place for comparison
 - The values 3.0 and 7.5 are referred to as numeric thresholds in step b) below
- The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm, and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm according to 4.1 f) is applied to determine SAR test exclusion.
- b) For 100 MHz to 6 GHz and test separation distances > 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following (also illustrated in Appendix B):
- 1) {[Power allowed at numeric threshold for 50 mm in step a)] + [(test separation distance – 50 mm) $\cdot$ (f(MHz)/150)]} mW, for 100 MHz to 1500 MHz
 - 2) {[Power allowed at numeric threshold for 50 mm in step a)] + [(test separation distance – 50 mm) $\cdot$ 10]} mW, for > 1500 MHz and ≤ 6 GHz
- c) For frequencies below 100 MHz, the following may be considered for SAR test exclusion (also illustrated in Appendix C):
- 1) For test separation distances > 50 mm and < 200 mm, the power threshold at the corresponding test separation distance at 100 MHz in step b) is multiplied by $[1 + \log(100/f(\text{MHz}))]$
 - 2) For test separation distances ≤ 50 mm, the power threshold determined by the equation in c) 1) for 50 mm and 100 MHz is multiplied by $\frac{1}{2}$
 - 3) SAR measurement procedures are not established below 100 MHz.

CLASSIFICATION

The antenna of this product under normal use condition, is less than 20 cm away from the body of the user. So, this device is classified as Portable device.

TEST REPORT No: (5220)234-0059

SAR test exclusion threshold

Frequency Band (MHz)	Maximum source-based time averaged conducted output power (dBm)	Tolerance (dBm)	Power in (mW)	Power threshold from c) 2 (mW)
13.56	-11.7	1	0.1	442.7

Therefore this device is not required SAR evaluation for general population exposure conditions since the SAR Test Exclusion Threshold condition is satisfied.
