Call Records Functions & Operations

Menu	Function Explained
Received	Stores and manages all your recently answered calls. If the number is in the phone book, then the contact name will be displayed; If the number is not in the phone book, the telephone number will be displayed directly. Use the  and  to scroll.
Dialed	Stores and manages all your recently dialed calls. If the number is in the phone book, then the contact name will be displayed; If the number is not in the phone book, the telephone number will be displayed directly. Use the  and  to scroll.
Missed	Stores and manages all your recently un-answered calls. If the number is in the phone book, then the contact name will be displayed; If the number is not in the phone book, the telephone number will be displayed directly. Use the  and  to scroll..
Call Duration	Monitors, stores, and manages air times of your calls.

Note: Calls can only be recorded if your network supports related features, if your phone is switched on, and if it is inside the network coverage area. Sub-menu and options functions are explained in the succeeding table, while refer to 'Accessing the Menu' on how to operate.

Your phone can store up to 100 contacts, while the SIM capacity will depend on your SIM card type. From the standby mode, you can press  to access the 'Input Name' mode for phone book search, or press  to display contact list. When the contact list is displayed, inputting the corresponding letter using the alpha numeric key pad will jump to the first record starts with the corresponding letter. For example, to view entries starts with letter "I", press "5" trice consecutively.

Each contact record in the contact list will have an icon before its name indicating its memory location:

: Phone

: SIM

If you have not assigned any number to a key for the speed dial, accessing the list it will be displayed as an 'Invalid Record'. The '1' key is reserve for voice mail access number with operating similar to the speed dial.

Tip: It may be helpful to keep another copy of your contacts elsewhere, this saves you a lot of trouble if ever your phone is damaged or lost.

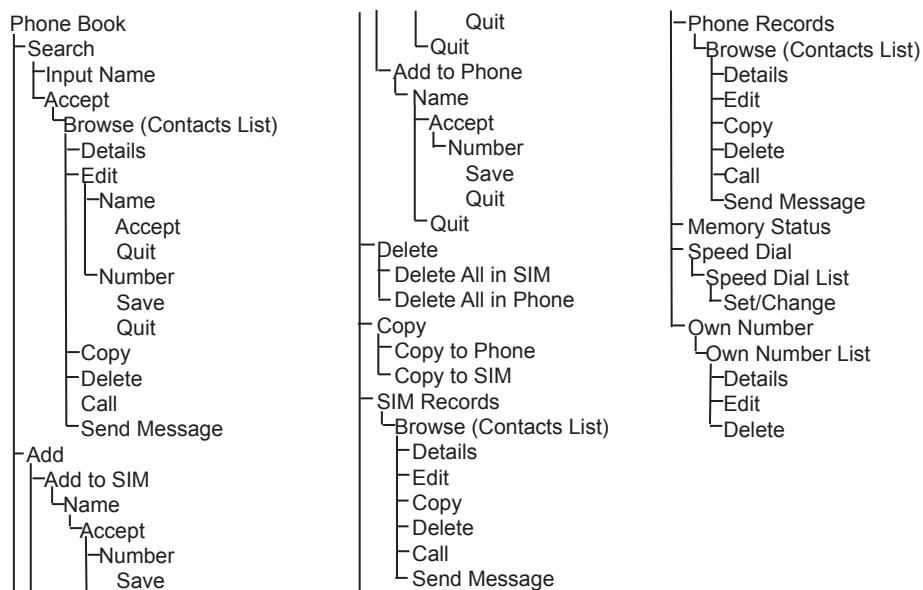

Tip: It is best to store numbers complete with international access code (+), country code, area code, and phone number, check with your provider for details and applicability.

As you are using the Phone Book feature, please see 'Accessing the Menu' for operations, you will be encountering options and sub-menu whose functions in the following table.

Options	Function Explained

The Phone Book Menu

Phone Book 29 **WIRD**

Phone Book Functions & Operations

Menu	Function Explained
Search	Browse the contact list and search for an entry. You can input first part or full name of contact to search, or press Left Soft Key without inputting to show contact list starting from first record in phone book.
Add	Add a contact (name & number) to SIM or phone memory.
Delete	Delete all SIM or phone memory contact entries.
Copy	Copy all contacts from SIM to phone or vise versa.
SIM Records	Display and browse SIM contacts.
Phone Records	Display and browse phone contacts.
Memory Status	View the memory consumption status shown as used / total. Use up or down navigator to shift display between SIM and phone.
Speed Dial	You can assign most often called numbers to keys "2" to "9", press the corresponding key from standby then the CALL key will instantly dial the number.
Own Number	View the memory consumption status shown as used / total.

After a new message is composed, selecting 'Send' option to input the recipient number. Or you can press  (Search) to access the contact list of your Phone Book and use  or  to scroll to the desired contact and press  to select.

Prior to sending, you will be prompted 'Save?', press  to send and save the message to Outbox, press  to send only.

When a new message is received, an alert prompt 'New Message, Read?' will be displayed, press  to read and  to return to standby and read later. The message icon will be displayed on the status/icon bar to remind you of existence of unread messages.

Received messages are store in SIM depending on its capacity. Your Phone can store 10 Outbox + 5 Draft messages. If mailbox capacity is filled, the message icon will flash, and a memory full alert prompt will be displayed. Delete some messages to be able to effectively received new messages. When the incoming message is bigger than the available memory, the new message received may be incomplete or damaged.

 **Tip:** When sending messages, the "sent" status alert from your phone mean only that it has been sent by your phone to the message center number as programmed into the phone, not to the intended recipient.

 **Tip:** Do not alter preinstalled settings by yourself if you do not understand it completely or without proper guidance.

In front of the message items of the message list in the mailboxes is a small icon indicating:

 : Unread message

 : Messages in SIM memory

 : Message in phone memory

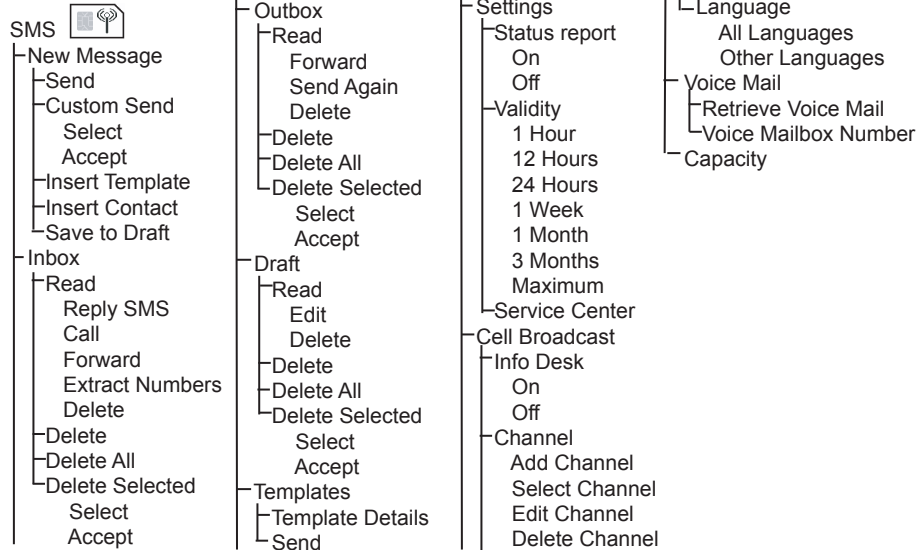

As you are using the SMS feature, please see 'Accessing the Menu' for operations, you will be encountering options and sub-menu whose functions in the following table.
