1 SCOPE

This document describes key hardware aspects of the Laird LWB5+ M.2 module providing either SDIO or USB2.0 interface for WLAN connection and UART/PCM, USB2.0/PCM for Bluetooth® connection. This document is intended to assist device manufacturers and related parties with the integration of this radio into their host devices. Data in this document is drawn from several sources and includes information found in the CYPRESS CYW4373EUBGT data sheet issued in July 2020, along with other documents provided from CYPRESS.

Note that the information in this document is subject to change. Please contact Laird to obtain the most recent version of this document.

2 INTRODUCTION

2.1 General Description

The LWB5+ M.2 module is an integrated, M.2 2230 E-Key standard factor, 1x1 SISO with T/R diversity, 802.11 a/b/g/n/ac WLAN plus *Bluetooth* 5.0 dual mode device that is optimized for low-power mobile devices. The integration of all WLAN and *Bluetooth* functionality in M.2 2230 E-Key standard factor supports low cost and simple implementation along with flexibility for platform-specific customization.

This device is pre-calibrated and integrates the complete transmit/receive RF paths including diplexer, switches, reference crystal oscillator and power manage units (PMU). There are two MHF4 connectors on the M.2 board, which can use certified antennas to support antenna diversity. For a lists of certified antennas, see section 16.2 in the datasheet.

The LWB5+ M.2 module supports IEEE 802.11ac 1x1 SISO with data rates up to MCS9 (433.3 Mbps). Internal Wi-Fi and BT coexistence scheme provides optimized throughput when Wi-Fi and BT are working simultaneously. The device's low power consumption radio architecture and power manage unit (PMU) proprietary power save technologies allow for extended battery life.

In addition, its dual 802.11 and Bluetooth radio includes full digital MAC and baseband engines that handle all 802.11 CCK/OFDM® 2.4/5GHz, and Bluetooth 5.0 (Basic Rate, Enhanced Data Rate and Bluetooth Low Energy) baseband and protocol processing.

Please contact Laird Sales/FAE for further information. Ordering information is listed in Table 1.

3 LWB5+ M.2 MODULE FEATURES SUMMARY

The Laird LWB5+ M.2 module features are described in [Table 2](#).

Table 2: LWB5+ M.2 module features

Feature	Description
Radio Front End	Integrates the complete transmit/receive diversity RF paths including diplexer, switches, reference crystal oscillator, and power manage unit (PMU). Supports 20/40/80MHz channel bandwidth. WLAN/Bluetooth share one antenna.
The <i>Bluetooth</i> ® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. Any use of such marks by Laird is under license. Other trademarks and trade names are those of their respective owners.	
Power Management	One Buck regulator, multiple LDO regulators, and a power management unit (PMU) are integrated into the CYW4373E. All regulators are programmable via the PMU. These blocks simplify power supply design for Bluetooth, and WLAN functions in embedded designs.
Pre-Calibration	RF system tested and calibrated in production
Sleep Clock	An external sleep clock of 32.768 KHz is required
Host Interface Options	The LWB5+ M.2 card provides two interfaces for customers to choose:- 1. SDIO 1.8V/UART , Wi-Fi section provides support for SDIO v3.0 and also is backward compatible with SDIO v2.0. Bluetooth section supports a high-speed 4-wire UART interface. 2. USB/USB , an on-chip USB 2.0 hub provides a shared single USB connection to both Wi-Fi and Bluetooth target devices.
Advanced WLAN	- IEEE 802.11ac compliant. - Support for MCS8 VHT20 in 20 MHz channels for up to 86.7 Mbps data. - Single-stream spatial multiplexing up to 433.3 Mbps data rate. - Supports 20, 40, and 80 MHz channels with optional SGI (256 QAM modulation). - Full IEEE 802.11a/b/g/n legacy compatibility with enhanced performance. - TX and RX low-density parity check (LDPC) support for improved range and power efficiency. - On-chip power amplifiers and low-noise amplifiers for both bands. - Support wide variety of WLAN encryption: WEP/WPA/TKIP/WPA2 AES-CCMPs
Advanced Bluetooth	- Qualified for Bluetooth Core Specification 5.0 with all Bluetooth 4.2 optional features - QDID: - Declaration ID: - Bluetooth Class 1 or Class 2 transmitter operation. - Support data rate: 1 Mbps (GFSK), 2 Mbps ($\pi/4$-DQPSK), 3 Mbps (8-DPSK) - Supports extended synchronous connections (eSCO), for enhanced voice quality by allowing for retransmission of dropped packets. - Adaptive frequency hopping (AFH) for reducing radio frequency interference. - Interface support, host controller interface (HCI) using a highspeed UART interface (or USB interface) and PCM for audio data. - Low power consumption improves battery life of IoT and embedded devices. - Supports multiple simultaneous Advanced Audio Distribution Profiles (A2DP) for stereo sound. - Automatic frequency detection for standard crystal and TCXO values.

5 WLAN FUNCTIONAL DESCRIPTION

5.1 Overview

The LWB5+ M.2 module is designed based on the CYPRESS CYW4373EUBGT 802.11ac/a/b/g/n chipset. It is optimized for high speed, reliable, and low-power embedded applications. It's integrated with dual-band WLAN (2.4/5GHz) and Bluetooth 5.0. Its functionality includes:

- Improved throughput on the link due to frame aggregation, RIFS (reduced inter-frame spacing), and half guard intervals.
- Support for LDPC (Low Density Parity Check) codes.
- Improved 11n performance due to features such as 11n frame aggregation (TX A-MPDU) and low-overhead host-assisted buffering (RX A-MPDU). These techniques can improve performance and efficiency of applications involving large bulk data transfers such as file transfers or high-resolution video streaming.
- IEEE 802.11ac, 1x1 SISO with data rate up to MCS9 (433.3Mbps).

Additional functionality is listed in the following table (Table 4).

Table 4: WLAN functions

Feature	Description
WLAN MAC	▪ Enhanced MAC for supporting IEEE 802.11ac features ▪ Transmission and reception of aggregated MPDUs (A-MPDUs) for very high throughput (VHT) ▪ Support for power management schemes, including WMM power-save, power-save multi-poll (PSMP) and multiphase PSMP operation ▪ Support for immediate ACK and Block-ACK policies ▪ Interframe space timing support, including RIFS ▪ Support for RTS/CTS and CTS-to-self frame sequences for protecting frame exchanges ▪ Back-off counters in hardware for supporting multiple priorities as specified in the WMM specification ▪ Timing synchronization function (TSF), network allocation vector (NAV) maintenance, and target beacon transmission time (TBTT) ▪ generation in hardware and capturing the TSF timer on an external time synchronization pulse ▪ Hardware offload for AES-CCMP, legacy WPA TKIP, legacy WEP ciphers, WAPI, and support for key management ▪ Support for coexistence with Bluetooth and other external radios ▪ Programmable independent basic service set (IBSS) or infrastructure basic service set functionality ▪ Statistics counters for MIB support
WLAN Security	▪ WLAN Encryption features supported include: – Temporal Key Integrity Protocol (TKIP)/Wired Equivalent Privacy (WEP) – Advanced Encryption Standard (AES)/Counter-Mode/CBC-MAC Protocol (CCMP) – WLAN Authentication and Private Infrastructure (WPAI)

6 BLUETOOTH FUNCTIONAL DESCRIPTION

The LWB5+ M.2 module includes a fully-integrated Bluetooth baseband/radio. Several features and functions are listed in Table 5.

Table 5: Bluetooth functions

Feature	Description
Bluetooth Interface	- Voice interface: - Hardware support for continual PCM data transmission/reception without processor overhead. - Standard PCM clock rates from 64 kHz to 2.048 MHz with multi-slot handshake and synchronization. - A-law, U-law, and linear voice PCM encoding/decoding. - High-Speed UART interface - USB 2.0
Bluetooth Core functionality	- Bluetooth 5.0 Core Spec (errata) - Bluetooth Class 2/Bluetooth class 1 - WLAN and Bluetooth share same LNA and antenna - Digital audio interfaces with TDM interface for voice application - Baseband and radio BDR and EDR package type: 1 Mbps, 2 Mbps, 3 Mbps - Fully functional Bluetooth baseband: AFH, forward error correction, header error control, access code correction, CRC, encryption bit stream generation, and whitening. - Adaptive Frequency Hopping (AFH) using Packet Error Rate (PER) - Interlaced scan for faster connection setup - Simultaneous active ACL connection setup - Automatic ACL package type selection - Full master and slave piconet support - Scatter net support - SCO/eSCO links with hardware accelerated audio signal processing and hardware supported PPEC algorithm for speech quality improvement - All standard SCO/eSCO voice coding - All standard pairing, authentication, link key, and encryption operations - Encryption (AES) support
Bluetooth Low Energy (BLE) Core functionality	- Bluetooth 5.0 Core Spec (Errata) - Bluetooth 4.2 Features: - LE privacy 1.2 - LE Secure Connection. - LE Data Length Extension - Bluetooth 4.0 Features: - Advertiser, Scanner, Initiator, Master, and Slave roles support (connects to 16 links) - WLAN/Bluetooth Coexistence (BCA) protocol support. - Shared RF with BDR/EDR - Encryption (AES) support. - Intelligent Adaptive Frequency Hopping (AFH)

8 ELECTRICAL CHARACTERISTICS

8.1 Absolute Maximum Ratings

Table 6 summarizes the absolute maximum ratings and Table 7 lists the recommended operating conditions for the LWB5+ M.2 module. Absolute maximum ratings are those values beyond which damage to the device can occur. Functional operation under these conditions, or at any other condition beyond those indicated in the operational sections of this document, is not recommended.

Note: Maximum rating for signals follows the supply domain of the signals.

Table 6: Absolute maximum ratings

Symbol (Domain)	Parameter	Max Rating	Unit
3V3	External 3.3V power supply	4.0	V
Storage	Storage Temperature	-40 to +85	°C
Antenna	Maximum RF input (reference to 50-Ω input)	+10	dBm
ESD	Electrostatic discharge tolerance	2000	V

8.2 Recommended Operating Conditions

Notes

[3] Dirty Tx is Off.

[4] The BLE TX power cannot exceed 10 dBm EIRP specification limit. The front-end losses and antenna gain/loss must be factored in so as not to exceed the limit.

[5] At least 99.9% of all $\Delta f2$ maximum frequency values recorded over 10 packets must be greater than 185 KHz.

10 HOST INTERFACE SPECIFICATIONS

10.1 SDIO Specifications

The LWB5+ M.2 module SDIO host interface pins are powered from the VIO_SD voltage supply, which is set internally at 1.8V on the M.2 module. The SDIO electrical specifications are identical for the 1-bit SDIO and 4-bit SDIO modes. Note – The SDIO host signals must be 1.8v at all times as defined by the M.2 standard.

Note: The Wi-Fi MAC address is located on the product label.
The last digit of Wi-Fi MAC address is assigned to either 0, 2, 4, 6, 8, A, C, E.
The BT MAC address is the Wi-Fi MAC address plus 1.

13 MOUNTING

The LWB5+ M.2 module connects to the host via a standard PCI EXPRESS M2 connector. The Kyocera's (www.Kyocera-connector.com) 6411 series provide 1.8 mm, 2.3 mm and 3.2 mm connector heights and JAE's (<https://www.jae.com/en/>) SM3 series provide 1.2 mm, 2.15 mm, 3.1 mm and 4.1 mm connector heights.

Because the LWB5+ M.2 module is a single-side component module, we recommend the following part numbers which have 2.3 mm and 3.1 mm connector height):

M.2 Key-E Connector	Connector Height
KYOCERA 24-6411-067-101-894E	2.3 mm
JAE SM3ZS067U310AERxxxx	3.1 mm

The stand-off mating to the recommend 2.3 mm connector from EMI STOP (www.EMISTOP.com) is part number **F50M16-041525P1D4M** and 3.1mm from JAE (<https://www.jae.com/en/>) is part number **SM3ZS067U310-NUT1-Rxxxx**.

Detail layout and stencil opening are show in [Figure 12](#).

The following is a list of RF layout design guidelines and recommendation when installing a Laird radio into your device.

- Do not run antenna cables directly above or directly below the radio.
- Do not place any parts or run any high speed digital lines below the radio.
- If there are other radios or transmitters located on the device (such as a *Bluetooth* radio), place the devices as far apart from each other as possible. Also, make sure there is at least 25 dB isolation between these two antennas.
- Ensure that there is the maximum allowable spacing separating the antenna connectors on the Laird radio from the antenna. In addition, do not place antennas directly above or directly below the radio.
- Laird recommends the use of a double-shielded cable for the connection between the radio and the antenna elements.
- Be sure to put a 10uF capacitor on EACH 3.3V power pin. Also, place that capacitor to the pin as close as possible to make sure the internal PMU working correctly.
- Use proper electro-static-discharge (ESD) procedures when installing the Laird radio module.
- To avoid negatively impacting Tx power and receiver sensitivity, do not cover the antennas with metallic objects or components.

14.1 Recommended and Required Storage/Handling Conditions

14.1.1 Prior to Opening the Dry Packing

The following are required storage conditions **prior to opening the dry packing**:

- Normal temperature: 5~40°C
- Normal humidity: 80% (Relative humidity) or less
- Storage period: One year or less

Note: Humidity means Relative Humidity.

14.1.2 After Opening the Dry Packing

The following are required storage conditions **after opening the dry packing** (to prevent moisture absorption):

- Storage conditions for one-time soldering:
 - Temperature: 5-25°C
 - Humidity: 60% or less
 - Period: 72 hours or less after opening
- Storage conditions for two-time soldering

Storage conditions following opening and prior to performing the 1st reflow:

- Temperature: 5-25°C
- Humidity: 60% or less
- Period: A hours or less after opening

Storage conditions following completion of the 1st reflow and prior to performing the 2nd reflow

- Temperature: 5-25°C
 - Humidity: 60% or less
 - Period: B hours or less after completion of the 1st reflow
- Note: Should keep A+B within 72 hours.

14.1.3 Temporary Storage Requirements after Opening

The following are temporary storage requirements after opening:

- Only re-store the devices *once* prior to soldering.
- Use a dry box or place desiccant (with a blue humidity indicator) with the devices and perform dry packing again using vacuumed heat-sealing.

The following indicate the required storage period, temperature, and humidity for this temporary storage:

1. Storage temperature and humidity

2. Storage period

- X1+X2 – Refer to After Opening the Dry Packing storage requirements. Keep is X1+X2 within 72 hours.
- Y – Keep within two weeks or less.

14.1.4 Precautions for Use

- Opening/handling/removing must be done on an anti-ESD treated workbench. All workers must also have undergone anti-ESD treatment.
- The devices should be mounted within one year of the date of delivery.

15.4 FCC

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Important Note:

Radiation Exposure Statement

The product complies with the US portable RF exposure limit set forth for an uncontrolled environment and is safe for intended operation as described in this manual. The further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such function is available.

Country Code selection feature to be disabled for products marketed to the US/CANADA.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Integration Instructions for Host Product Manufacturers

Applicable FCC rules to module:

FCC Part 15.247

Summarize the specific operational use conditions:

This device is intended only for OEM integrators under the following condition:

- The transmitter module may not be co-located with any other transmitter or antenna

As long as 1 condition above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

IMPORTANT NOTE: In the event that these conditions cannot be met (for example certain laptop configurations or co-location with another transmitter), then the FCC authorization is no longer considered valid and the FCC ID cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC

authorization. The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

RF exposure considerations

Co-located issue shall be met as mentioned in *Summarize the specific operational use conditions*.

Product manufacturer shall provide the following text in the end-product manual:

FCC Radiation Exposure Statement

The product complies with the US portable RF exposure limit set forth for an uncontrolled environment and are safe for intended operation as described in this manual. The further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such function is available.

A 20-centimeter separation distance and co-located issue shall be met as mentioned in *Summarize the specific operational use conditions*.

Product manufacturer shall provide the following text in the end-product manual:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

Label and Compliance Information

Product manufacturers must provide, with the finished product, a physical or e-label that states the following:

Contains FCC ID: SQG-LWB5PLUS

Information on Test Modes and Additional Testing Requirements

Test tool: wl tool shall be used to set the module to transmit continuously.

Additional Testing, Part 15 Subpart B Disclaimer

The module is only FCC authorized for the specific rule parts listed on the grant, and that the host product manufacturer is responsible for compliance to any other FCC rules that apply to the host not covered by the modular transmitter grant of certification. The final host product still requires Part 15 Subpart B compliance testing with the modular transmitter installed.

15.5ISED Canada

This device contains licence-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS(s). Operation is subject to the following two conditions:

- (1) This device may not cause interference*
- (2) This device must accept any interference, including interference that may cause undesired operation of the device*

L'émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

- (1) L'appareil ne doit pas produire de brouillage;*

(2) L'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

This radio transmitter (IC: 3147A-LWB5PLUS) has been approved by Innovation, Science and Economic Development Canada to operate with the antenna types listed below, with the maximum permissible gain indicated. Antenna types not included in this list that have a gain greater than the maximum gain indicated for any type listed are strictly prohibited for use with this device.

Le présent émetteur radio (IC: 3147A-LWB5PLUS) a été approuvé par Innovation, Sciences et Développement économique Canada pour fonctionner avec les types d'antenne énumérés ci dessous et ayant un gain admissible maximal. Les types d'antenne non inclus dans cette liste, et dont le gain est supérieur au gain maximal indiqué pour tout type figurant sur la liste, sont strictement interdits pour l'exploitation de l'émetteur.

Radiation Exposure Statement:

This equipment complies with Canada radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

Déclaration d'exposition aux radiations:

Cet équipement est conforme Canada limites d'exposition aux radiations dans un environnement non contrôlé. Cet équipement doit être installé et utilisé à distance minimum de 20cm entre le radiateur et votre corps.

This device is intended only for OEM integrators under the following conditions:

- 1) The transmitter module may not be co-located with any other transmitter or antenna.

As long as the condition above is met, further transmitter testing is not required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

Cet appareil est conçu uniquement pour les intégrateurs OEM dans les conditions suivantes:

- 1) Le module émetteur peut ne pas être coïmplanté avec un autre émetteur ou antenne.

Tant que les 1 condition ci-dessus sont remplies, des essais supplémentaires sur l'émetteur ne seront pas nécessaires. Toutefois, l'intégrateur OEM est toujours responsable des essais sur son produit final pour toutes exigences de conformité supplémentaires requis pour ce module installé.

IMPORTANT NOTE: In the event that these conditions cannot be met (for example certain laptop configurations or co-location with another transmitter), then the Canada authorization is no longer considered valid and the IC ID cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate Canada authorization.

NOTE IMPORTANTE: Dans le cas où ces conditions ne peuvent être satisfaites (par exemple pour certaines configurations d'ordinateur portable ou de certaines co-localisation avec un autre émetteur), l'autorisation du Canada n'est plus considéré comme valide et l'ID IC ne peut pas être utilisé sur le produit final. Dans ces circonstances, l'intégrateur OEM sera chargé de réévaluer le produit final (y compris l'émetteur) et l'obtention d'une autorisation distincte au Canada.

End Product Labeling

The final end product must be labeled in a visible area with the following: "Contains IC: 3147A-LWB5PLUS.

Plaque signalétique du produit final

Le produit final doit être étiqueté dans un endroit visible avec l'inscription suivante: "Contient des IC: 3147A-LWB5PLUS.

Manual Information to the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

Manuel d'information à l'utilisateur final

L'intégrateur OEM doit être conscient de ne pas fournir des informations à l'utilisateur final quant à la façon d'installer ou de supprimer ce module RF dans le manuel de l'utilisateur du produit final qui intègre ce module.

Le manuel de l'utilisateur final doit inclure toutes les informations réglementaires requises et avertissements comme indiqué dans ce manuel

15.6 Japan (MIC) Regulatory

It is recommended that the host device bears a label showing the Japanese "GITEKI" mark and the certification number accompanied by the following statement:

当該機器には電波法に基づく、技術基準適合証明等を受けた特定無線設備を装着している

Translation: "This equipment contains specified radio equipment that has been certified to the Technical Regulation Conformity Certification under the Radio Law."

15.7 European Union

The integrator must include specific information in the user's guide for the device into which the Sterling-LWB5+ is integrated. In addition to the required FCC and IC statements outlined above, the following Radio Equipment Directive (RED) statements must be added in their entirety and without modification into a prominent place in the user's guide for the device into which the LWB5+ is integrated:

- This device complies with the essential requirements of the 2014/53/EU – Radio Equipment Directive (RED). The following test methods have been applied in order to prove presumption of conformity with the essential requirements of the 2014/53/EU – Radio Equipment Directive (RED):
- **EN 62368-1:2014/A11:2017**

Declaration of Compliance – EU Directive 2015/863; Reduction of Hazardous Substances (RoHS)

This device is a 2.4 GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries, except in France and Italy where restrictive use applies.

In Italy the end-user should apply for a license at the national spectrum authorities in order to obtain authorization to use the device for setting up outdoor radio links and/or for supplying public access to telecommunications and/or network services.

This device may not be used for setting up outdoor radio links in France and in some areas the RF output power may be limited to 10 mW EIRP in the frequency range of 2454 – 2483.5 MHz. For detailed information the end-user should contact the national spectrum authority in France.

17 BLUETOOTH SIG QUALIFICATION

17.1 Overview

The LWB5+ Series module is listed on the Bluetooth SIG website as a qualified Controller Subsystem.

Design Name	Owner	Declaration ID	Link to listing on the SIG website
	Laird		
	Laird		

It is a mandatory requirement of the Bluetooth Special Interest Group (SIG) that every product implementing Bluetooth technology has a Declaration ID. Every Bluetooth design is required to go through the qualification process, even when referencing a Bluetooth Design that already has its own Declaration ID. The Qualification Process requires each company to register as a member of the Bluetooth SIG – www.bluetooth.org

The following is a link to the Bluetooth Registration page: <https://www.bluetooth.org/login/register/>

For each Bluetooth Design, it is necessary to purchase a Declaration ID. This can be done before starting the new qualification, either through invoicing or credit card payment. The fees for the Declaration ID will depend on your membership status, please refer to the following webpage:

<https://www.bluetooth.org/en-us/test-qualification/qualification-overview/fees>

For a detailed procedure of how to obtain a new Declaration ID for your design, please refer to the following SIG document, (login is required to view this document):

17.2 Qualification Steps When Referencing a Laird Controller Subsystem Design

To qualify your product when referencing a Laird Controller Subsystem design, follow these steps:

1. To start a listing, go to: https://www.bluetooth.org/tpg/QLI_SDoc.cfm

Note: A user name and password are required to access this site.

2. In step 1, select the option, New Listing and Reference a Qualified Design.
3. Enter **XXXXXX** in the Controller Subsystem table entry.
4. Enter your complimentary Host Subsystem and optional Profile Subsystem QDID in the table entry.
5. Select your pre-paid Declaration ID from the drop-down menu or go to the Purchase Declaration ID page.

Note: Unless the Declaration ID is pre-paid or purchased with a credit card, you cannot proceed until the SIG invoice is paid.

6. Once all the relevant sections of step 1 are finished, complete steps 2, 3, and 4 as described in the help document accessible from the site.

Your new design will be listed on the SIG website and you can print your Certificate and DoC.

For further information please refer to the following training material:
