

# Certificate of Test

November 2005

## Wireless Engineering Inc.

Product Type : Wireless Trackball Keyboard

Model Number : XBOARD RF05

Test Report Number : GTK-0511066

Date of Test : November 08, 2005- November 18, 2005

Issue Date : November 25, 2005

This Product was tested to the following standards at the laboratory of Global EMC Standard Tech. Corp., and found Compliance.

This report was copied from GesTek report#0511028, which differs in applicant and model number and brand name, because of the requirement of marketing.

### Standards:

FCC Part 15 Subpart B Paragraph 15.249

ANSI C63.4: 2001

## 1. CERTIFICATION

### Applicant : Wireless Engineering Inc.

EUT Description : Wireless Trackball Keyboard  
 Model Number : XBOARD RF05  
 Serial Number : N/A  
 Brand Name : Wireless Engineering Inc.  
 FCC ID : SRJXBOARDRF05  
 Tested Power Supply : Battery DC 4.5V  
 Manufacturer : SUNREX TECHNOLOGY CORP.  
 Manufacturer Address : No. 188-1, Chung Cheng Rd., Ta Ya Shiang, Taichung Hsien,  
 Taiwan, R.O.C.

### MEASUREMENT PROCEDURES USED:

- ☒ CFR 47, Part 15 Radio Frequency Device Subpart C Intentional Radiators :2005  
☒ ANSI C63.4 Methods of Measurements of Radio-Noise Emissions from Low- Voltage  
 Electrical and Electronic Equipment in the range of 9kHz To 40GHz.  
 2003

THE MEASUREMENT SHOWN IN THE ATTACHMENT WAS MADE IN ACCORDANCE WITH  
 THE PROCEDURES INDICATED, AND THE MAXIMUM ENERGY EMITTED BY THE  
 EQUIPMENT WAS FOUND TO BE WITHIN THE ABOVE LIMITS APPLICABLE.

Sample Received Date : November 08, 2005

Final Test Date : November 18, 2005

Issue Date : November 25, 2005

 approval, or endorsement by NVLAP or the United States government.

## 2. GENERAL INFORMATION

### 2.1 PRODUCTION DESCRIPTION

**Product Name** : Wireless Trackball Keyboard  
**Model Number** : XBOARD RF05  
**Serial Number** : N/A  
**Brand Name** : Wireless Engineering Inc.  
**FCC ID** : SRJXBOARDRF05  
**Modulation Type** : GFSK  
**Antenna Type** : Printed on PCB  
**Frequencg Range** : 2.400G~2.524G  
**Channel Number** : 1 Channel  
**Working Voltage** : Battery DC 4.5V

#### Frequency of Each Channel:

| Channel | Frequency (GHz) |
|---------|-----------------|
| 1       | 2.420           |

**Note:**

1. This device is a Wireless Trackball Keyboard included wireless transmtion of keyboard.  
The test report is for transmitter.
2. This device is one channel and perform the test, then record on this report.
3. The antenna of EUT is printer on PCB and conform to FCC 15.203.
4. These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 15 Subpart C Paragraph 15.249.
5. The device of receiver to accordance with Part 15 regulations and under Declaration of Conformity and record of measurment in another test report.
6. This report was copies from GesTek report#0511028, which differs in applicant and model number and brand name, because of the requirement of marketing.

## 2.2 OPERATIONAL DESCRIPTION

This device is a Wireless Trackball Keyboard included wireless transmitter of keyboard.

It is powered by Battery DC 4.5V.

This device is only one channel and it is operated in 2.420GHz with GFSK modulation.

The Receiver is usb interface and it is capable to receive signal from transmitter to control PC or notebook.

## 2.3 TEST MODES & EUT COMPONENTS DESCRIPTION

| EUT: Wireless Trackball Keyboard, M/N: XBOARD RF05 |           |
|----------------------------------------------------|-----------|
| Test Mode                                          | Mode 1    |
| Frequency                                          | 2.420 GHz |

## 2.4 SUMMARY OF TEST PROCEDURE AND TEST RESULTS

| Test Item          | Applied Standard Section                       | Test Result                 |
|--------------------|------------------------------------------------|-----------------------------|
| Radistion Emission | 15.209, ANSI C63.4 Section 8                   | Pass (refer to section 3.7) |
| Peak Power Output  | 15.249(a), ANSI C63.4 Section 13<br>& Annex I  | Pass (refer to section 3.7) |
| Band Edge          | 15.249(d) , ANSI C63.4 Section 13<br>& Annex I | Pass (refer to section 4.6) |

## 2.5 CONFIGURATION OF THE TESTED SYSTEM

The FCC IDs/Types for all equipment, plus descriptions of all cables used in the tested system (including inserted cards, which have grants) are:

| Device                                          | No.     | Configuration                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 2.7 TEST SETUP

Below 1GHz

TX: Wireless Trackball Keyboard

Above 1GHz

TX: Wireless Trackball Keyboard

## 2.8 EUT OPERATING CONDITIONS

The EUT exercise program used during conducted testing was designed to exercise the EUT in a manner similar to a typical use. The exercise sequence is listed as below:

1. Setup the EUT and simulators as shown on 2.7.
2. Turn on the power of all equipments.
3. The transmitter will transmit the signal continue.
4. Confirm the receiver is receive signal continue.
5. Repeat the above steps.

### 3. RADIATION EMISSION DATA

#### 3.1 TEST EQUIPMENT

The following test equipments are used during the radiated emission tests:

Radiated test was performed on: ☐ Site #1 ☐ Site #2 ☒ Site #3 ☐ Site #4

| Item | Instrument            | Manufacturer    | Model     | Serial No.    | Last Cal. |
|------|-----------------------|-----------------|-----------|---------------|-----------|
| 1    | Test Receiver         | R & S           | ESCS30    | 825022/003    | 05/26/05  |
| 2    | Spectrum Analyzer     | ADVANTEST       | R3172     | 150800149     | 09/14/05  |
| 3    | Power Meter           | Rohde & Schwarz | NRVS      | 100666        | 04/15/05  |
| 4    | Peak Power Sensor     | Rohde & Schwarz | NRV-Z32   | 8360191058    | 04/15/05  |
| 5    | Pre-Amplifier         | HP              | 8447D     | 2944A08272    | 09/26/05  |
| 6    | BILOG ANTENNA         | SCHAFFNER       | CBL6112B  | 2620          | 11/30/04  |
| 7    | Horn Antenna          | Schwarzbeck     | BBHA 9120 | D243          | 12/22/04  |
| 8    | RF Cable              | GesTek          | N/A       | GTK-E-A151-01 | 02/14/05  |
| 9    | Open Site             | GesTek          | N/A       | B1            | 11/23/04  |
| 10   | Test Program Software | GesTek          | N/A       | GTK-E-S001-01 | N/A       |

Note: All measurement critical items of test instrumentation were within their calibration period of 1 year.

#### 3.2 OPEN TEST SITE SETUP DIAGRAM

Note: This is a representative setup diagram for Table-top EUT.

For Floor-standing EUT, the table will be removed with all others setup condition remain the same.

### 3.3 RADIATED EMISSION LIMIT

#### ☒ General Radiated Emission Limits

Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50dB below the level of the fundamental or to the general radiated emission limits in paragraph 15.209, whichever is the lesser attenuation.

| Frequency  | Distance | Field Strength  |                          |
|------------|----------|-----------------|--------------------------|
| MHz        | Meter    | $\mu\text{V/M}$ | $\text{dB}\mu\text{V/M}$ |
| 30 to 88   | 3        | 100             | 40.0                     |
| 88 to 216  | 3        | 150             | 43.5                     |
| 216 to 960 | 3        | 200             | 46.0                     |
| Above 960  | 3        | 500             | 54.0                     |

#### Remarks :

1. RF Voltage ( $\text{dB}\mu\text{V/m}$ ) =  $20 \log \text{RF Voltage } (\mu\text{V/m})$
2. In the Above Table, the tighter limit applies at the band edges.
3. Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system.

#### ☒ Fundamental and Harmonics Emission Limits

| Frequency   | Distance | Field Strength of Fundamental |                          | Field Strength of Harmonics |                          |
|-------------|----------|-------------------------------|--------------------------|-----------------------------|--------------------------|
| MHz         | Meter    | $\mu\text{V/M}$               | $\text{dB}\mu\text{V/M}$ | $\mu\text{V/M}$             | $\text{dB}\mu\text{V/M}$ |
| 902-928     | 3        | 50                            | 94                       | 500                         | 54                       |
| 2400-2483.5 | 3        | 50                            | 94                       | 500                         | 54                       |
| 5725-5875   | 3        | 50                            | 94                       | 500                         | 54                       |

#### Remarks :

1. RF Voltage ( $\text{dB}\mu\text{V/m}$ ) =  $20 \log \text{RF Voltage } (\mu\text{V/m})$
2. Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system.

### 3.4 EUT CONFIGURATION

The equipment which is listed 2.6 are installed on Radiated Emission Test to meet the Commission requirement and operating in a manner which tends to maximize its emission characteristics in a normal application.

The device under test, installed in a representative system as described in section 3.2, was placed on a non-conductive table whose total height equaled 80 cm. This table can be rotated 360 degree. The measurement antenna was mounted to a non-conductive mast capable of moving the antenna vertically. Antenna height was varied from 1 meter to 4 meters and the system under test was rotated from 0 degree through 360 degrees relative to the antenna position and polarization (Horizontal and Vertical). Also the I/O cable position was investigated to find the maximum emission condition.

### 3.5 OPERATING CONDITION OF EUT

Same as section 2.7.

### 3.6 RADIATED EMISSION DATA

The measurement range of radiated emission, which is from [30 MHz to 10 Harminics](#), was investigated. All readings below 1GHz are quasi-peak values with a resolution bandwidth of 120 KHz. Above 1GHz are peak and avg. values with a resolution bandwidth of 1MHz. The initial step in collecting radiated emission data is a spectrum analyzer peak scans of the measurement range for all the test modes and then use test receiver for final measurement. Then the worst modes were reported the following data pages.

### 3.7 RADIATED EMISSIONS MEASUREMENT RESULTS

#### 3.7.1 HARMONIC RADIATED EMISSIONS

|                  |                             |                 |            |
|------------------|-----------------------------|-----------------|------------|
| Date of Test     | November 18, 2005           | Temperature     | 25 deg/C   |
| EUT              | Wireless Trackball Keyboard | Humidity        | 59 %RH     |
| Working Cond.    | Channel 1                   | Display Pattern | H Pattern  |
| Antenna distance | 3m at Horizontal            | Frequency Range | 30-1000MHz |

| No. | Frequency MHz | Reading Level dBuV | Factor dB | Measurement dBuV/m | Limit dBuV/m | Over Limit dB | Detector |

| 1   | 41.6          | 39.38              | -11.39    | 27.99              | 40           | -12.01        | QP       |
| 2   | 54            | 50.22              | -17.61    | 32.61              | 40           | -7.39         | QP       |
| 3   | 112.5         | 44.42              | -13.48    | 30.94              | 43.5         | -12.56        | QP       |
| 4   | 191.242       | 46                 | -14.38    | 31.62              | 43.5         | -11.88        | QP       |
| 5   | 300           | 40.33              | -8.53     | 31.8               | 46           | -14.2         | QP       |
| 6   | 405           | 34.55              | -6.05     | 28.5               | 46           | -17.5         | QP       |
| 7   | 608.6         | 35.12              | -2.99     | 32.13              | 46           | -13.87        | QP       |

#### Remarks:

1. All Readings below 1GHz are Quasi-Peak.
2. Emission Level= Reading + Factor (Could have  $\pm 0.01$  tolerance due to computer automatically round off calculation).
3. Over Limit (Margin Value)=Measurement level-Limit value.
4. The " " means this data is worst-case Measurement level.

80.0 dBuV/m

## Remarks:

1. All Readings below 1GHz are Quasi-Peak.
2. Emission Level= Reading + Factor (Could have  $\pm 0.01$  tolerance due to computer automatically round off calculation).
3. Over Limit (Margin Value)=Measurement level-Limit value.
4. The " " means this data is worst-case Measurement level.

| 9    | RF Cable              | GesTek          | N/A       | GTK-E-A151-01 | 02/14/05  |
| 10   | Open Site             | GesTek          | N/A       | B1            | 11/23/04  |
| 11   | Test Program Software | GesTek          | N/A       | GTK-E-S001-01 | N/A       |

Note: All measurement critical items of test instrumentation were within their calibration period of 1 year.

### 4.2 BLOCK DIAGRAM OF TEST SETUP

#### ⊙ RF Radiated Measurement: ⊙

#### **4.3 BAND EDGE LIMIT**

In any 100KHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 50dB below that in the 100KHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209 (a) (see Section 15.205(c)).

#### **4.4 EUT CONFIGURATION**

The EUT and its simulators are placed on a turn table which is 0.8 meter above ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level. The EUT was positioned such that the distance from antenna to the EUT was 3 meters.

The antenna can move up and down between 1 meter and 4 meters to find out the maximum emission level.

Both horizontal and vertical polarization of the antenna are set on measurement. In order to find the maximum emission, all of the interface cables must be manipulated according to ANSI C63.4:2000 on radiated measurement.

The bandwidth below 1GHz setting on the field strength meter is 120KHz, above 1GHz are 1MHz.

#### **4.5 OPERATING CONDITION OF EUT**

Same as section 2.7.

#### 4.6 TEST RELULT

|                  |                             |             |            |
|------------------|-----------------------------|-------------|------------|
| Date of Test     | November 01, 2005           | Temperature | 25.3 deg/C |
| EUT              | Wireless Trackball Keyboard | Humidity    | 53.1 %RH   |
| Working Cond.    | Channel 1                   |             |            |
| Antenna distance | 3m at Horizontal            | Test Band   | Lower      |

### Radiation Emission of Fundamental Peak

| Frequency<br>[MHz] | Reading Level<br>[dB(uV)] | Correction Factor<br>[dB/m] | Emission Level<br>[dB(uV/m)] |
|--------------------|---------------------------|-----------------------------|------------------------------|
| 2420               | 60.80                     | 31.54                       | 92.25                        |

#### Remark:

1. All Readings below 1GHz are Quasi-Peak and above 1GHz are peak or average.
2. Spectrum Analyzer Setting(Peak Detector): RBW=1MHz, VBW=1MHZ.
3. Emission Level= Reading + Correction Factor (Could have  $\pm 0.01$  tolerance due to computer automatically round off calculation).
4. Correction Factor= Antenna Factor + Cable Loss – Amplifier Factor

#### TEST Result

The band edge emission plot on page 23 are Peak. The polt for peak is appear (30.05)dB delta between carry power and maximum emission in restrict band 2355 MHz.

The above tables are list of fundamental emission test result.

Therefore, peak field strength of 2355 MHz is 92.25 dBuV/m – 30.05 dB = 62.2 dBuV/m which is under 74dBuV/m.

Average filed strength = Peak filed strength + Duty Cycle

(AVG = Peak x Duty Cycle,  $20\log\text{AVG} = 20\log\text{Peak} + 20\log\text{Duty Cycle}$ )

$20\log\text{Duty Cycle} = (-32.72)\text{dB}$

Average field strength of (2355)MHz is

$(62.2) \text{ dBuV/m} + (-20)\text{dB} = (42.2)\text{dBuV/m}$  which is under 54dBuV/m.

#### Remark:

If Duty Cycle is smaller than -20dB, based on FCC part15 the duty cycle correction factor is -20dB for calculating average emission.

|                  |                             |             |            |
|------------------|-----------------------------|-------------|------------|
| Date of Test     | November 14, 2005           | Temperature | 25.3 deg/C |
| EUT              | Wireless Trackball Keyboard | Humidity    | 53.1 %RH   |

## Radiation Emission of Fundamental Peak

| Frequency [MHz] | Reading Level [dB(uV)] | Correction Factor [dB/m] | Emission Level [dB(uV/m)] |
|-----------------|------------------------|--------------------------|---------------------------|
| 2419.8          | 41.51                  | 24.31                    | 65.82                     |

### Remark:

1. All Readings below 1GHz are Quasi-Peak and above 1GHz are peak or average.
2. Spectrum Analyzer Setting(Peak Detector): RBW=1MHz, VBW=1MHz.
3. Emission Level= Reading + Correction Factor (Could have  $\pm 0.01$  tolerance due to computer automatically round off calculation).
4. Correction Factor= Antenna Factor + Cable Loss – Amplifier Factor

## TEST Result

The band edge emission plot on page 23 are Peak. The polt for peak is appear (30.05)dB delta between carry power and maximum emission in restrict band 2355 MHz.

The above tables are list of fundamental emission test result.

Therefore, peak field strength of 2355 MHz is 65.82 dBuV/m – 30.05 dB = 35.77 dBuV/m which is under 74dBuV/m.

Average filed strength = Peak filed strength + Duty Cycle

(AVG = Peak x Duty Cycle,  $20\log\text{AVG} = 20\log\text{Peak} + 20\log\text{Duty Cycle}$ )

$20\log\text{Duty Cycle} = (-32.72)\text{dB}$

Average field strength of (2355)MHz is

$(35.77) \text{ dBuV/m} + (-20)\text{dB} = (15.77)\text{dBuV/m}$  which is under 54dBuV/m.

### Remark:

If Duty Cycle is smaller than -20dB, based on FCC part15 the duty cycle correction factor is -20dB for calculating average emission.

Date: 14.NOV.2005 15:17:19

|                  |                             |             |            |
|------------------|-----------------------------|-------------|------------|
| Date of Test     | November 14, 2005           | Temperature | 25.3 deg/C |
| EUT              | Wireless Trackball Keyboard | Humidity    | 53.1 %RH   |
| Working Cond.    | Channel 1                   |             |            |
| Antenna distance | 3m at Horizontal            | Test Band   | Higher     |

## Radiation Emission of Fundamental Peak

| Frequency [MHz] | Reading Level [dB(uV)] | Correction Factor [dB/m] | Emission Level [dB(uV/m)] |
|-----------------|------------------------|--------------------------|---------------------------|
| 2420            | 60.80                  | 31.45                    | 92.25                     |

### Remark:

1. All Readings below 1GHz are Quasi-Peak and above 1GHz are peak or average.
2. Spectrum Analyzer Setting(Peak Detector): RBW=1MHz, VBW=1MHz.
3. Emission Level= Reading + Correction Factor (Could have  $\pm 0.01$  tolerance due to computer automatically round off calculation).
4. Correction Factor= Antenna Factor + Cable Loss – Amplifier Factor

## TEST Result

The band edge emission plot on 26 are Peak. The polt for peak is appear (41.3)dB delta between carry power and maximum emission in restrict band 2497 MHz.

The above tables are list of fundamental emission test result.

Therefore, peak field strength of 2497 MHz is 92.25 dBuV/m – 41.3 dB = 50.95 dBuV/m which is under 74dBuV/m.

Average filed strength = Peak filed strength + Duty Cycle

(AVG = Peak x Duty Cycle,  $20\log\text{AVG} = 20\log\text{Peak} + 20\log\text{Duty Cycle}$ )

$20\log\text{Duty Cycle} = (-32.72)\text{dB}$

Average field strength of (2497)MHz is

$(50.95) \text{ dBuV/m} + (-20)\text{dB} = (30.95)\text{dBuV/m}$  which is under 54dBuV/m.

### Remark:

If Duty Cycle is smaller than -20dB, based on FCC part15 the duty cycle correction factor is -20dB for calculating average emission.

## TEST Result

The band edge emission plot on page 26 are Peak. The polt for peak is appear (41.3)dB delta between carry power and maximum emission in restrict band 2497 MHz.

The above tables are list of fundamental emission test result.

Therefore, peak field strength of 2497 MHz is 65.82 dBuV/m – 41.3 dB = 24.52 dBuV/m which is under 74dBuV/m.

Average filed strength = Peak filed strength + Duty Cycle

(AVG = Peak x Duty Cycle,  $20\log\text{AVG} = 20\log\text{Peak} + 20\log\text{Duty Cycle}$ )

$20\log\text{Duty Cycle} = (-32.72)\text{dB}$

Average field strength of (2497)MHz is

$(24.52) \text{ dBuV/m} + (-20)\text{dB} = (4.52)\text{dBuV/m}$  which is under 54dBuV/m.

### Remark:

If Duty Cycle is smaller than -20dB, based on FCC part15 the duty cycle correction factor is -20dB for calculating average emission.

## 5. DUTY CYCLE

### 5.1 TEST EQUIPMENT

The following test equipments are used during the radiated emission tests:

| Item | Instrument        | Manufacturer    | Model  | Serial No. | Last Cal. |
|------|-------------------|-----------------|--------|------------|-----------|
| 1    | Spectrum Analyzer | Rohde & Schwarz | FSP40  | 100061     | 04/01/05  |
| 2    | Spectrum Analyzer | HP              | E4407B | 39240339   | 07/26/05  |

Note: All measurement critical items of test instrumentation were within their calibration period of 1 year.

### 5.2 BLOCK DIAGRAM OF TEST SETUP

### 5.3 TEST RESULT

|               |                             |             |            |
|---------------|-----------------------------|-------------|------------|
| Date of Test  | November 14, 2005           | Temperature | 25.3 deg/C |
| EUT           | Wireless Trackball Keyboard | Humidity    | 53 %RH     |
| Working Cond. | Channel 1                   |             |            |
|               |                             |             |            |

Duty Cycle = Time on of one cycle / Totally time of one cycle

Frequency 2420 MHz

Time on of one slot length = 556 (μs) = 0.556 (msec)

Time on of one cycle = 0.556 (msec)

Totally time of one cycle = 24 (msec)

Duty Cycle = 0.556 / 24 = 0.0231

20 log 0.0231 = -32.72 dB

Remark:

If Duty Cycle is smaller than -20dB, based on FCC part15 the duty cycle correction factor is -20dB for calculating average emission.
