Hello William,

The answers of your comments are as follows.

1. The device supports only Block A band of US PCS. (15MHz band) So, we apply just PCS A band for it.
2. I uploaded the revised label form and 731 form of it on ATCB web.
3. I know for that. But, we can't open the duplexer.
4. I uploaded the revised confidentiality request letter on ATCB web.
5. Because we correct the confidentiality letter, the manual is ok.
6. It is included page 8 bottom of the manual.
7. I uploaded the Authorization letter on ATCB web.
8. It is included page 9 of RF test report.
9. The repeater is just an amplifier. So, it is not modulate and demodulate. It just amplifies the input CDMA signal. In this case, should we select which emission code? Please recommend us for it.

My client wants to get the grant of it within tomorrow.
If you need anything, let me know.

Thanks.
