Dear Sir/Madam,

Re: Request for FCC module certification
FCC ID: SU3-RMBLEB

We hereby request a "Modular" certification for the FCC ID referenced above.
Please see MPE Report.pdf

- The module has metal case covering top and side as it's own RF shielding, The shielding at bottom is implemented by the GND copper plane in PCB substrate
Please see External Photo.pdf
- The device has buffered modulation/data inputs to ensure that the device will comply with Part 15 requirements with any type of input signal;
There is an ARM Cortex M3 MCU inside module as an embedded processor to buffer the data.
- The device has power supply regulation on the module;
There is an U4 MCU to regulate power distribution for application.
- The device has a permanently attached antenna, or contain a unique antenna connector, and be marketed and operated only with specific antenna(s), per Sections 15.203, 15.204(b), 15.204(c), 15.212(a), 2.929(b);
- The device has demonstrated compliance in a stand-alone configuration;
- The device will be labeled with its permanently affixed FCC ID label, or use an electronic display.
- The device does comply with all specific rules applicable to the transmitter including all the conditions provided in the integration instructions by the grantee;
The module is compliant with all applicable FCC rules, Detail instructions are given in the User Manual
- The device does comply with RF exposure requirements.
Please see MPE Report.pdf

Sincerely,

A handwritten signature in black ink that reads "James Pan".

A. Single-modular transmitter is a self-contained, physically delineated, component for which compliance can be demonstrated independent of the host operating conditions, and which complies with all eight requirements of Section 15.212(a)(1) as summarized below. See Section 15.212 for more detailed information, and Section 2.901 (and sub-sections that follow) for general certification requirements.

B. Limited single-modular transmitter is a transmitter that does not meet all eight requirements listed in Section 15.212(a) (1), and compliance can be demonstrated only for specific host and applicable operating conditions in which the transmitter will be used. For example, manufacturers have flexibility with respect to requirements such as module shielding, buffered modulation/data inputs and power supply regulation. If one or more of these functions (shielding, buffered modulation/data inputs and power supply regulation) are provided by a specific host or hosts, then the module can be granted as a limited module that is limited to that specific host or hosts. The responsible party must demonstrate how it will retain control over the final installation of the device, such that compliance of the product is ensured by limiting the installation to a specific host or hosts, for example.
