1.2 Test specifications

FCC 47 CFR Part 15, Subpart C, Clause 15.231	Periodic operation in the band 40.66–40.70 MHz and above 70 MHz
--	---

1.3 Test methods

ANSI C63.10 v 2013	American National Standard for Procedures for Compliance Testing of Unsilenced Wireless Devices
--------------------	---

1.4 Statement of compliance

Testing was performed against all relevant requirements of the test standard. Results obtained indicate that the product under test does not comply in full with the requirements tested. The test results relate only to the items tested.

See "Summary of test results" for full details.

1.5 Applicability

Due to a nature of the equipment under test some parts of the standards could not be fulfilled and required special authorization from the government authorities. It is up to manufacturer to obtain permission to operate in the frequency range and with the field strength of fundamental as tested and reported in this document.

1.6 Test report revision history

Revision #	Details of changes made to test report
466676TRFWL	Original report issued

Section 2. Summary of test results

2.1 FCC Part 15 Subpart C test results

Part	Test description	Verdict
§15.207(a)	Conducted limits	Not applicable
§15.203	Antenna requirement	Pass ²
§15.231(a)	Conditions for intentional radiators to comply with periodic operation	Pass
§15.231(b)	Field strength of emissions	Pass
§15.231(c)	Emission bandwidth	Pass
§15.231(d)	Requirements for devices operating within 40.66–40.70 MHz band	Not applicable
§15.231(e)	Conditions for intentional radiators to comply with periodic operation	Not applicable

Notes: ¹ Measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, was performed with the supply voltage varied between 85 % and 115 % of the nominal rated supply voltage. No noticeable output power variation was observed

² The Antennas are located within the enclosure of EUT and not user accessible.

Section 3. Equipment under test (EUT) details

3.1 Sample information

Receipt date	June 06, 2022
Nemko sample ID number	4666760001

3.2 EUT information

Product name	Remote Control Key
Model	S8TL318E4
Serial number	466676 assigned by Nemko

3.3 Technical information

Frequency band	(TX) 318 MHz
Frequency Min (MHz)	318 MHz
Frequency Max (MHz)	318 MHz
RF power Max (W)	N/A
Field strength (dB μ V/m @ 3 m)	69.1 dB μ V/m (average)
Measured BW (kHz) (99%)	14.98
Calculated BW (kHz), as per TRC-43	--
Type of modulation	AM/ASK
Emission classification (F1D, G1D, D1D)	15K0F1D
Transmitter spurious, (dB μ V/m @ 3 m)	--
Power requirements	3 Vdc
Antenna information	Integral

3.4 Product description and theory of operation

Radium series S8 is 4 buttons transmitter operating at 318 MHz in AM/ASK modulation.

It has been designed for the programmable telephone entry systems, anti burglar systems and access control systems.

3.5 Test plan and measurement techniques

3.6 EUT setup diagram

Figure 3.6-2: EUT setup block diagram

3.7 EUT sub assemblies

Table 3.7-1: EUT sub assemblies

Description	Brand name	Model/Part number	Serial number
--	--	--	--
--	--	--	--

Section 4. Engineering considerations

4.1 Modifications incorporated in the EUT

There were no modifications performed to the EUT during this assessment.

4.2 Technical judgment

Due to a nature of the equipment under test some parts of the standards could not be fulfilled and required special authorization from the government authorities. It is up to manufacturer to obtain permission to operate in the frequency range and with the field strength of fundamental as tested and reported in this document.

EUT was tested as proposed in specially developed test plan for this project.

4.3 Deviations from laboratory tests procedures

No deviations were made from laboratory procedures.

Section 5. Test conditions

5.1 Atmospheric conditions

Temperature	15–30 °C
Relative humidity	20–75 %
Air pressure	860–1060 mbar

When it is impracticable to carry out tests under these conditions, a note to this effect stating the ambient temperature and relative humidity during the tests shall be recorded and stated.

5.2 Power supply range

The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of the present document, the nominal voltage shall be the declared voltage, or any of the declared voltages $\pm 5\%$, for which the equipment was designed.

Section 6. Measurement uncertainty

6.1 Uncertainty of measurement

Measurement uncertainty budgets for the tests are detailed below. Measurement uncertainty calculations assume a coverage factor of $K = 2$ with 95% certainty.

Table 6.1-1: Measurement uncertainty

EUT	Type	Test	Range	Measurement Uncertainty	Notes
Transmitter	Conducted	Frequency error	0.001 MHz ÷ 40 GHz	0.08 ppm	(1)
		Carrier power RF Output Power	0.009 MHz ÷ 30 MHz	1.1 dB	(1)
			30 MHz ÷ 18 GHz	1.5 dB	(1)
			18 MHz ÷ 40 GHz	3.0 dB	(1)
			40 MHz ÷ 140 GHz	5.0 dB	(1)
		Adjacent channel power	1 MHz ÷ 18 GHz	1.4 dB	(1)
		Conducted spurious emissions	0.009 MHz ÷ 18 GHz	3.0 dB	(1)
			18 GHz ÷ 40 GHz	4.2 dB	(1)
			40 GHz ÷ 220 GHz	6.0 dB	(1)
		Intermodulation attenuation	1 MHz ÷ 18 GHz	2.2 dB	(1)
		Attack time – frequency behaviour	1 MHz ÷ 18 GHz	2.0 ms	(1)
		Attack time – power behaviour	1 MHz ÷ 18 GHz	2.5 ms	(1)
		Release time – frequency behaviour	1 MHz ÷ 18 GHz	2.0 ms	(1)
		Release time – power behaviour	1 MHz ÷ 18 GHz	2.5 ms	(1)
		Transient behaviour of the transmitter – Transient frequency behaviour	1 MHz ÷ 18 GHz	0.2 kHz	(1)
		Transient behaviour of the transmitter – Power level slope	1 MHz ÷ 18 GHz	9%	(1)
		Frequency deviation - Maximum permissible frequency deviation	0.001 MHz ÷ 18 GHz	1.3%	(1)
		Frequency deviation - Response of the transmitter to modulation frequencies above 3 kHz	0.001 MHz ÷ 18 GHz	0.5 dB	(1)
		Dwell time	-	3%	(1)
		Hopping Frequency Separation	0.01 MHz ÷ 18 GHz	1%	(1)
Receiver	Radiated	Radiated spurious emissions	0.009 MHz ÷ 26.5 GHz	6.0 dB	(1)
			26.5 GHz ÷ 66 GHz	8.0 dB	(1)
			66 GHz ÷ 220 GHz	10 dB	(1)
			10 kHz ÷ 26.5 GHz	6.0 dB	(1)
		Effective radiated power transmitter	26.5 GHz ÷ 66 GHz	8.0 dB	(1)
			66 GHz ÷ 220 GHz	10 dB	(1)
			0.009 MHz ÷ 26.5 GHz	6.0 dB	(1)
			26.5 GHz ÷ 66 GHz	8.0 dB	(1)
			66 GHz ÷ 220 GHz	10 dB	(1)
		Sensitivity measurement	1 MHz ÷ 18 GHz	6.0 dB	(1)
	Conducted	Conducted spurious emissions	0.009 MHz ÷ 18 GHz	3.0 dB	(1)
			18 GHz ÷ 40 GHz	4.2 dB	(1)
			40 GHz ÷ 220 GHz	6.0 dB	(1)

NOTES:
 (1) The reported expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor $k = 2$, which for a normal distribution corresponds to a coverage probability of approximately 95 %

Section 8. Testing data

8.1 FCC 15.31(m) 9 Number of frequencies

8.1.1 Definitions and limits

FCC:
 Measurements on intentional radiators or receivers shall be performed and, if required, reported for each band in which the device can be operated with the device operating at the number of frequencies in each band specified in the following table.

Table 8.1-1: Frequency Range of Operation

Frequency range over which the device operates (in each band)	Number of test frequencies required	Location of measurement frequency inside the operating frequency range
1 MHz or less	1	Center (middle of the band)
1–10 MHz	2	1 near high end, 1 near low end
Greater than 10 MHz	3	1 near high end, 1 near center and 1 near low end

Note: “near” means as close as possible to or at the centre / low end / high end of the frequency range over which the device operates.

8.1.2 Test date

Start date 15-Jul-2022

8.1.3 Observations, settings and special notes

None

8.1.4 Test data

Table 8.1-2: Test channels selection

Start of Frequency range, MHz	End of Frequency range, MHz	Frequency range bandwidth, MHz	Low channel, MHz	Mid channel, MHz	High channel, MHz
318	318	--	--	--	--

8.2 FCC 15.203 section 6.8 Antenna requirement

8.2.1 Definitions and limits

FCC:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited. This requirement does not apply to intentional radiators that must be professionally installed, such as perimeter protection systems and some field disturbance sensors, or to other intentional radiators which, in accordance with §15.31(d), must be measured at the installation site. However, the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this part are not exceeded.

For expediting the testing, measurements may be performed using only the antenna with highest gain of each combination of transmitter and antenna type, with the transmitter output power set at the maximum level. However, the transmitter shall comply with the applicable requirements under all operational conditions and when in combination with any type of antenna from the list provided in the test report.

8.2.2 Test date

Start date 15 July, 2022

8.2.3 Observations, settings and special notes

None

8.2.4 Test data

Must the EUT be professionally installed? ☒ YES ☐ NO
Does the EUT have detachable antenna(s)? ☐ YES ☒ NO
If detachable, is the antenna connector(s) non-standard? ☐ YES ☐ NO ☒ N/A

8.3 FCC 15.231(a) Conditions for intentional radiators to comply with periodic operation

8.3.1 Definitions and limits

- FCC:**
- (a) The provisions of this section are restricted to periodic operation within the band 40.66–40.70 MHz and above 70 MHz. Except as shown in paragraph (e) of this section, the intentional radiator is restricted to the transmission of a control signal such as those used with alarm systems, door openers, remote switches, etc. Continuous transmissions, voice, video and the radio control of toys are not permitted. Data is permitted to be sent with a control signal. The following conditions shall be met to comply with the provisions for this periodic operation:
 - (1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.
 - (2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.
 - (3) Periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions, including data, to determine system integrity of transmitters used in security or safety applications are allowed if the total duration of transmissions does not exceed more than two seconds per hour for each transmitter. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.
 - (4) Intentional radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life, when activated to signal an alarm, may operate during the pendency of the alarm condition.
 - (5) Transmission of set-up information for security systems may exceed the transmission duration limits in paragraphs (a)(1) and (a)(2) of this section, provided such transmissions are under the control of a professional installer and do not exceed ten seconds after a manually operated switch is released or a transmitter is activated automatically. Such set-up information may include data.

8.3.2 Test summary

Test date	15 July, 2022
-----------	---------------

8.3.3 Observations, settings and special notes

The timing details were declared and provided by the manufacturer.

8.3.4 Test data

- | | | |
|--|---|--|
| 1) The EUT is manually triggered? | ☒ YES | ☐ NO |
| 2) The EUT is activated automatically? | ☐ YES | ☒ NO |
| 3) The EUT is a periodic transmitter? | ☐ YES | ☒ NO |
| 4) The EUT's usage is for radio control purposes during emergencies? | ☐ YES | ☒ NO |
| 5) The EUT transmits set-up information? | ☐ YES | ☒ NO |

§15.35(c) When the radiated emission limits are expressed in terms of the average value of the emission, and pulsed operation is employed; the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds.

Date: 13.JUN.2022 12:01:16

Tx on= 1.002 ms *17 =17.034 ms on 100 ms

Duty cycle correction factor for pulse duration = $20 \times \log_{10} (17.034 / 100) = -15.38 \text{ dB}$

A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released

Date: 14.JUN.2022 12:33:35

8.4 FCC 15.231(b) Field strength of emissions

8.4.1 Definitions and limits

FCC:

- (b) In addition to the provisions of §15.205 the field strength of emissions from intentional radiators operated under this section shall not exceed the following table.
- 1) The field strength limits in the table are specified at a distance of 3 meters. The tighter limits apply at the band edges.
 - 2) Intentional radiators operating under the provisions of this section shall demonstrate compliance with the limits on the field strength of emissions, as shown in the above table, based on the average value of the measured emissions. As an alternative, compliance with the limits in the above table may be based on the use of measurement instrumentation with a CISPR quasi-peak detector. The specific method of measurement employed shall be specified in the application for equipment authorization. If average emission measurements are employed, the provisions in §15.35 for averaging pulsed emissions and for limiting peak emissions apply. Further, compliance with the provisions of §15.205 shall be demonstrated using the measurement instrumentation specified in that section.
 - 3) The limits on the field strength of the spurious emissions in the table below are based on the fundamental frequency of the intentional radiator. Spurious emissions shall be attenuated to the average (or, alternatively, CISPR quasi-peak) limits shown in this table or to the general limits shown in §15.209, whichever limit permits a higher field strength.

Table 8.4-1: Field strength limits

Fundamental frequency (MHz)	Field strength of fundamental		Field strength of spurious emissions	
	($\mu\text{V}/\text{m}$)	(dB $\mu\text{V}/\text{m}$)	($\mu\text{V}/\text{m}$)	(dB $\mu\text{V}/\text{m}$)
40.66–40.70	2,250	67	225	47
70–130	1,250	61.9	125	41.9
130–174	1,250 to 3,750*	61.9 to 71.5*	125 to 375*	41.9 to 51.5*
174–260	3,750	71.5	375	51.5
260–470	3,750 to 12,500*	71.5 to 81.9*	375 to 1,250*	51.5 to 61.9*
Above 470	12,500	81.9	1,250	61.9

* Linear interpolations

Note:

* Linear interpolation with frequency F in MHz

Table 8.4-2: FCC §15.209 – Radiated emission limits

Frequency, MHz	Field strength of emissions		Measurement distance, m
	$\mu\text{V/m}$	$\text{dB}\mu\text{V/m}$	
0.009–0.490	2400/F	$67.6 - 20 \times \log_{10}(F)$	300
0.490–1.705	24000/F	$87.6 - 20 \times \log_{10}(F)$	30
1.705–30.0	30	29.5	30
30–88	100	40.0	3
88–216	150	43.5	3
216–960	200	46.0	3
above 960	500	54.0	3

Notes: In the emission table above, the tighter limit applies at the band edges.

For frequencies above 1 GHz the limit on peak RF emissions is 20 dB above the maximum permitted average emission limit applicable to the equipment under test

Table 8.4-3: ISSED restricted frequency bands

8.4.2 Test summary

Test date 15-Jul-2022

8.4.3 Observations, settings and special notes

The spectrum was searched from 30 MHz to the 6 GHz.

Radiated measurements were performed at a distance of 3 m. Where the distance was reduced to increase dynamic range appropriate distance correction factor was applied to the measurement results.

Average radiated emissions were obtained by subtracting duty cycle / correction factor from the peak measurement results.

Spectrum analyzer settings for radiated measurements within restricted bands below 1 GHz:

Resolution bandwidth	100 kHz
Video bandwidth	300 kHz
Detector mode	Peak
Trace mode	Max Hold

Spectrum analyzer settings for peak radiated measurements within restricted bands above 1 GHz:

Resolution bandwidth	1 MHz
Video bandwidth	3 MHz
Detector mode	Peak
Trace mode	Max Hold

8.4.4 Test data

Duty cycle/average factor calculations

§15.35(c) When the radiated emission limits are expressed in terms of the average value of the emission, and pulsed operation is employed; the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds.

$$\text{Duty cycle or average factor} = 20 \times \log_{10} \left(\frac{T \times 100_{ms}}{100_{ms}} \right)$$

$$\text{Duty cycle correction factor for pulse duration} = 20 \times \log_{10} (17.034 / 100) = -15.38 \text{ dB}$$

Table 8.4-5: Radiated field strength of fundamental measurement results

E.U.T in horizontal position

Frequency (MHz)	Polarization V/H	Peak field strength (dB μ V/m)	Duty cycle corr. (dB)	Avg field strength (dB μ V/m)	Avg limit (dB μ V/m)	Avg margin (dB)
318	H	69.1	-15.4	53.7	54.4	-0.7
Frequency (MHz)	Polarization V/H	Peak field strength (dB μ V/m)	Duty cycle corr. (dB)	Avg field strength (dB μ V/m)	Avg limit (dB μ V/m)	Avg margin (dB)
318	V	54.6	-15.4	39.2	54.4	-15.2
Frequency (MHz)	Polarization V/H	Peak field strength (dB μ V/m)	Duty cycle corr. (dB)	Avg field strength (dB μ V/m)	Avg limit (dB μ V/m)	Avg margin (dB)
636	V	--	-15.4	--	--	--
954	V	--	-15.4	--	--	--
1272	V	--	-15.4	--	--	--
1590	V	--	-15.4	--	--	--
1908	V	--	-15.4	--	--	--
Frequency (MHz)	Polarization V/H	Peak field strength (dB μ V/m)	Duty cycle corr. (dB)	Avg field strength (dB μ V/m)	Avg limit (dB μ V/m)	Avg margin (dB)
636	H	--	-15.4	--	--	--
954	H	--	-15.4	--	--	--
1272	H	--	-15.4	--	--	--
1590	H	--	-15.4	--	--	--
1908	H	--	-15.4	--	--	--

The correction factor was calculated as follows: $20 \times \log_{10} (17.034 / 100) = -15.38$ dB

E.U.T in vertical position

Frequency (MHz)	Polarization V/H	Peak field strength (dBμV/m)	Duty cycle corr. (dB)	Avg field strength (dBμV/m)	Avg limit (dBμV/m)	Avg margin (dB)
318	H	63.2	-15.4	47.8	54.4	-6.6
Frequency (MHz)	Polarization V/H	Peak field strength (dBμV/m)	Duty cycle corr. (dB)	Avg field strength (dBμV/m)	Avg limit (dBμV/m)	Avg margin (dB)
318	V	68.7	-15.4	53.3	54.4	-1.1
Frequency (MHz)	Polarization V/H	Peak field strength (dBμV/m)	Duty cycle corr. (dB)	Avg field strength (dBμV/m)	Avg limit (dBμV/m)	Avg margin (dB)
636	V	--	-15.4	--	--	--
954	V	--	-15.4	--	--	--
1272	V	--	-15.4	--	--	--
1590	V	--	-15.4	--	--	--
1908	V	--	-15.4	--	--	--
Frequency (MHz)	Polarization V/H	Peak field strength (dBμV/m)	Duty cycle corr. (dB)	Avg field strength (dBμV/m)	Avg limit (dBμV/m)	Avg margin (dB)
636	H	--	-15.4	--	--	--
954	H	--	-15.4	--	--	--
1272	H	--	-15.4	--	--	--
1590	H	--	-15.4	--	--	--
1908	H	--	-15.4	--	--	--

The correction factor was calculated as follows: $20 \times \log_{10} (17.034 / 100) = -15.38 \text{ dB}$

here is no limit for the fundamental at the tested frequencies in the specifications tested, therefore the final result is subject for special authorization.

8.5 FCC 15.231(c) Emission bandwidth of momentary signals

8.5.1 Definitions and limits

FCC:

The bandwidth of the emission shall be no wider than 0.25 % of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5 % of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.

8.5.2 Test summary

Test date: 2022-07-15

8.5.3 Observations, settings and special notes

Limit: 0.5 % of 318 GHz is 0.795 MHz

Spectrum analyzer settings:

Resolution bandwidth	≥ 1 % of emission bandwidth
Video bandwidth	≥ 3 × RBW
Frequency span	Wider than emission bandwidth
Detector mode	Peak

8.5.4 Test data

Table 8.5-1: Occupied bandwidth measurement result

Occupied bandwidth per frequency, MHz	Limit, MHz	Margin, MHz
0.01498	0.79500	0.78002
