Note :

1. *The input to the amplifier is tuned such that the output power is set to its maximum rated power*
2. *The spectrum analyzer for this measurement was set with RBW and VBW, as recorded in the plots.*
3. *The frequency band measurements were performed at the rated supply voltage and ±10% of the rated supply voltage.*
4. *The measurements were performed at the shielded room.with environmental conditions of 27℃, 50%RH*

Note :

1. *The input to the amplifier is CDMA, NADC, GSM modulated signal tuned such that the output power is set to its maximum rated output power.*
2. *The RF output ports were properly terminated by the RF load and were connected to the RF Power Meter and Spectrum analyzer through the directional coupler.*
3. *The spectrum analyzer for this measurement was set with the RBW 100kHz in the range of 30MHz ~1GHz, and RBW 1MHz in the range of 1GHz~26.5GHz, as recorded in the plots. The VBW was set the same as RBW.*
4. *The measurements were performed at the shielded room.with environmental conditions of 27℃, 50%RH*
5. *Plots were taken with single input at low, mid, and high of the band. Plots were taken of the out-of-band emissions from 30MHz to the 10th harmonic of the carrier frequency.*
6. *For measuring emissions above 0.9 GHz, a high-pass filter was used to eliminate the fundamental transmit frequency to prevent possible saturation effects on the front end of the spectrum analyzer.*
7. *The emissions shall not be more than 43 + 10 log (P) dBc below the mean power output, which is equivalent to –13 dBm.*
