

Theory of operation:

The EUT uses WI-FI communication technology.

WI-FI communication is a wireless technology that exchange data over short distances, using short-wavelength radio waves, the EUT transmit in 2.4GHz.radio wave.

The EUT communicates with a local router. Using the router internet link, the RUT connects establishes Galcon cloud. The connection can last for days and when dropped – the RUT will try to recover it.

The EUT has a chip antenna.
