Emission

Radiation Emission Measurement (30MHz to 1GHz) Setup diagram:

Test Method:

The sample was placed 0.8m above the ground plane on the OATS*. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X,Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

*. OATS [Open Area Test Site] located at GTC with a metal ground plane filed with the FCC pursuant to section 2.948 of the FCC rules. With Registration Number:493655

20dB Bandwidth of Fundamental Emission

Appl. : Hobby Master Limited
Model: HT0101
Operation: On mode

Test Requirement: FCC 47CFR 15.235
Test Method: ANSI C63.4:2003
(section 13.1.7)
Test Date: 2006-03-07

Test Method:

The bandwidth is measured at an amplitude level reduced from the reference level by a specified ratio. The reference level is the level of the highest amplitude signal observed from the transmitter at the fundamental frequency. Once the reference level is established, the equipment is conditioned with typical modulating signal to produce the worst-case (i.e. the widest) bandwidth.

APPENDIX B

Duty Cycle Correction During 100msec

Each function key sends a different series of characters, but each packet period (43.95msec) never exceeds a series of 4 long (950usec) and 58 short (250usec) pulses. Assuming any combination of short and long pulses may be obtained due to encoding the worst case transmit duty cycle would be considered $4 \times 950\text{msec} + 58 \times 250\text{msec}$ per $43.95\text{msec} = 41.6\%$ duty cycle. Figure A through C show the characteristics of the pulse train for one of these functions.

Remarks:

Duty Cycle Correction $= 20\text{Log}(0.416) = -7.6\text{dB}$

The following figures [Figure A to Figure C] show the characteristics of the pulse train for one of these functions.

Figure A [Pulse Train]

Figure B [Long Pulse]

Figure C [Short Pulse]
