

# EMI TEST REPORT

## Test Report No. 15385574H-C-R2

|                     |                                |
|---------------------|--------------------------------|
| Customer            | ASAHI DENSO CO., LTD.          |
| Description of EUT  | Controller                     |
| Model Number of EUT | FZ134                          |
| FCC ID              | T8VFZ134                       |
| Test Regulation     | FCC Part 15 Subpart B, Class B |
| Test Result         | Complied                       |
| Issue Date          | January 27, 2025               |
| Remarks             | -                              |

**Representative test engineer**Ken Fujita  
Engineer**Approved by**Shinichi Miyazono  
Leader

CERTIFICATE 5107.02

- ☐ The testing in which "Non-accreditation" is displayed is outside the accreditation scopes in UL Japan, Inc.  
☒ There is no testing item of "Non-accreditation".

Report Cover Page - Form-ULID-003532 (DCS:13-EM-F0429) Issue# 23.0

## **ANNOUNCEMENT**

- This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.
- The results in this report apply only to the sample tested. (Laboratory was not involved in sampling.)
- This sample tested is in compliance with the limits of the above regulation.
- The test results in this test report are traceable to the national or international standards.
- This test report must not be used by the customer to claim product certification, approval, or endorsement by the A2LA accreditation body.
- This test report covers EMC technical requirements. It does not cover administrative issues such as Manual or non-EMC test related Requirements. (if applicable)
- The all test items in this test report are conducted by UL Japan, Inc. Ise EMC Lab.
- The opinions and the interpretations to the result of the description in this report are outside scopes where UL Japan, Inc. has been accredited.
- The information provided by the customer for this report is identified in SECTION 1.
- The laboratory is not responsible for information provided by the customer which can impact the validity of the results.
- For test report(s) referred in this report, the latest version (including any revisions) is always referred.

## **REVISION HISTORY**

### **Original Test Report No.: 15385574H-C**

This report is a revised version of 15385574H-C-R1. 15385574H-C-R1 is replaced with this report.

The information provided by the customer is as follows;

- Customer, Description of EUT, Model Number of EUT on the cover and other relevant pages
- Operating/Test Mode(s) (Mode(s)) on all the relevant pages
- SECTION 1: Customer Information
- SECTION 2: Equipment Under Test (EUT) other than the Receipt Date and Test Date
- SECTION 4: Operation of EUT during testing

## **SECTION 2: Equipment under test (EUT)**

### **2.1 Identification of EUT**

|               |                                                                                           |
|---------------|-------------------------------------------------------------------------------------------|
| Description   | Controller                                                                                |
| Model Number  | FZ134                                                                                     |
| Serial Number | Refer to SECTION 4.2                                                                      |
| Condition     | Production prototype<br>(Not for Sale: This sample is equivalent to mass-produced items.) |
| Modification  | No Modification by the test lab                                                           |
| Receipt Date  | June 17, 25 and July 9, 2024                                                              |
| Test Date     | August 18, 2024 to January 9, 2025                                                        |

### **2.2 Product Description**

#### **General Specification**

|                                     |                                                                       |
|-------------------------------------|-----------------------------------------------------------------------|
| Rating                              | DC 3.7 V                                                              |
| Operating temperature               | Radio operating temperature range (BT LE):<br>-10 deg. C to 50 deg. C |
|                                     | Charging temperature range:<br>0 deg. C to 40 deg. C                  |
| Clock frequency (ies) in the system | 16 MHz (Main CPU)                                                     |

#### **Radio Specification**

|                        |                      |
|------------------------|----------------------|
| Equipment Type         | Transceiver          |
| Frequency of Operation | 2402 MHz to 2480 MHz |
| Type of Modulation     | GFSK                 |
| Antenna Gain           | 2.6 dBi              |

## SECTION 3: Test specification, procedures & results

### 3.1 Test Specification

|                    |                                                                                    |
|--------------------|------------------------------------------------------------------------------------|
| Test Specification | FCC Part 15 Subpart B<br>The latest version on the first day of the testing period |
| Title              | FCC 47CFR Part15 Radio Frequency Device<br>Subpart B Unintentional Radiators       |

### 3.2 Procedures and results

| Item               | Test Procedure                                                                                 | Limits  | Worst margin                                        | Result   | Remarks |
|--------------------|------------------------------------------------------------------------------------------------|---------|-----------------------------------------------------|----------|---------|
| Conducted emission | ANSI C63.4: 2014 +<br>C63.4a: 2017<br>7. AC power - line<br>conducted emission<br>measurements | Class B | 9.62 dB<br>0.50721 MHz,<br>QP, Phase N<br>(Mode 4)  | Complied | -       |
| Radiated emission  | ANSI C63.4: 2014 +<br>C63.4a: 2017<br>8. Radiated<br>emission measurements                     | Class B | 4.59 dB<br>206.953 MHz,<br>Vertical, QP<br>(Mode 2) | Complied | -       |

\* Note: UL Japan, Inc.'s EMI Work Procedure: Work Instructions-ULID-003591.

### 3.3 Addition to standard

No addition, exclusion nor deviation has been made from the standard.

### 3.4 Uncertainty

Measurement uncertainty is not taken into account when stating conformity with a specified requirement.  
Note: When margins obtained from test results are less than the measurement uncertainty, the test results may exceed the limit.

The following uncertainties have been calculated to provide a confidence level of 95 % using a coverage factor  $k = 2$ .

#### Conducted emission

| Item       | Frequency range    | Unit | Calculated Uncertainty (+/-) |
|------------|--------------------|------|------------------------------|
| AMN (LISN) | 0.15 MHz to 30 MHz | dB   | 3.3                          |

#### Radiated emission

| Radiated emission    |                     |            |      |                              |
|----------------------|---------------------|------------|------|------------------------------|
| Measurement distance | Frequency range     |            | Unit | Calculated Uncertainty (+/-) |
| 3 m                  | 9 kHz to 30 MHz     |            | dB   | 3.3                          |
| 10 m                 |                     |            | dB   | 3.1                          |
| 3 m                  | 30 MHz to 200 MHz   | Horizontal | dB   | 5.0                          |
|                      |                     | Vertical   | dB   | 5.0                          |
|                      | 200 MHz to 1000 MHz | Horizontal | dB   | 5.2                          |
|                      |                     | Vertical   | dB   | 6.2                          |

| No.12 measurement room     | 2.6 x 3.4 x 2.5            | N/A                                                              | -                      | -                            |
| Large Chamber              | 16.9 x 22.1 x 10.17        | 16.9 x 22.1                                                      | -                      | 10 m                         |
| Small Chamber              | 5.3 x 6.69 x 3.59          | 5.3 x 6.69                                                       | -                      | -                            |

\* Size of vertical conducting plane (for Conducted Emission test): 2.0 x 3.0 m for No.1, No.2, No.3, No.4, and No.5 semi-anechoic chambers and No.3 and No.4 shielded rooms.

### 3.6 Test data, Test instruments, and Test set up

Refer to APPENDIX.

## SECTION 4: Operation of EUT during testing

### 4.1 Operating Mode(s)

|             |                                                               |
|-------------|---------------------------------------------------------------|
| Mode        | 1. BLE Communication (FZ134 only)                             |
|             | 2. BLE Communication (FZ134+FZ135)                            |
|             | 3. USB Charge (FZ134 only)                                    |
|             | 4. USB Charge + BLE Communication (FZ134 only) <sup>*1)</sup> |
| Software(s) | WPT_TX_ES2 Version: Ver1.3                                    |

<sup>\*1)</sup> The test was performed conservatively.

### 4.2 Configuration and peripherals

\* Cabling and setup(s) were taken into consideration and test data was taken under worse case conditions.

<sup>\*a)</sup> Ferrite Core Model No. E04sr2000935A (Manufacture seiwa) 10 cm from Item B, 3 turns

<sup>\*b)</sup> Conducted Emission test was excluded since the this device is installed on a ship.

### Description of EUT and Support equipment

| No. | Item       | Model number | Serial number | Manufacturer          | Remark         |
|-----|------------|--------------|---------------|-----------------------|----------------|
| A   | Controller | FZ134        | 2             | ASAHI DENSO CO., LTD. | EUT            |
| B   | Holder     | FZ135        | 1             | ASAHI DENSO CO., LTD. | -              |
| C   | AC Adapter | RP-UC11      | 0SCN19NY      | RAVPOWER              | <sup>*1)</sup> |

| E   | AC Adapter | ACA-IP52BK   | J04-0256268   | SANWA supply          | <sup>*2)</sup> |

### List of cables used

| No. | Name      | Length (m) | Shield     |            | Remark         |
|-----|-----------|------------|------------|------------|----------------|
|     |           |            | Cable      | Connector  |                |
| 1   | DC Cable  | 2.3        | Unshielded | Unshielded | -              |
| 2   | USB Cable | 1.0        | Shielded   | Shielded   | <sup>*1)</sup> |
| 3   | USB Cable | 0.5        | Shielded   | Shielded   | <sup>*2)</sup> |

<sup>\*1)</sup> Used for Mode 3 and Mode 4 only.

<sup>\*2)</sup> Used for Mode 1 and Mode 2 and Mode 4 only.

## **SECTION 5: Conducted Emission**

### **5.1 Operating environment**

Date : See data  
Test place : See data  
Temperature : See data  
Humidity : See data  
Test engineer : See data

### **5.2 Test configuration**

EUT was placed on a urethane platform of nominal size, 1.0 m by 1.5 m, raised 0.8 m above the conducting ground plane.

The rear of tabletop was located 40 cm to the vertical conducting plane. The rear of EUT and its peripherals was aligned and flushed with rear of tabletop. All other surfaces of tabletop were at least 80 cm from any other grounded conducting surface. EUT was located 80 cm from the LISN/AMN. They were folded back and forth forming a bundle 30 cm to 40 cm long and were hanged at a 40 cm height to the ground plane. Each EUT current-carrying power lead, except the ground (safety) lead, was individually connected through a LISN/AMN to the input power source. All unused 50 ohm connectors of the LISN/AMN were resistivity terminated in 50 ohm when not connected to the measuring equipment. Photographs of the set up are shown in APPENDIX 3.

Frequency range : 0.15 MHz to 30 MHz  
EUT position : Table top  
EUT operation mode : See Clause 4.1

### **5.3 Test procedure**

The AC Mains Terminal Continuous disturbance Voltage has been measured with the EUT within a semi anechoic chamber. The EUT was connected to a Line Impedance Stabilization Network (LISN)/ Artificial Mains network (AMN). An overview sweep with peak detection has been performed. The measurements have been performed with a quasi-peak detector and if required, with an average detector.

The conducted emission measurements were made with the following detector function of the test receiver.

Detector Type : QP and CAV  
IF Bandwidth : 9 kHz

**Figure 1: Test Setup**

### **5.4 Test result**

Summary of the test results: Pass

The test result is rounded off, so some differences might be observed.

## **SECTION 6: Radiated Emission**

### **6.1 Operating environment**

Date : See data  
Test place : See data  
Temperature : See data  
Humidity : See data  
Test engineer : See data

### **6.2 Test configuration**

EUT was placed on a urethane platform of nominal size, 1.0 m by 1.5 m, raised 0.8 m above the conducting ground plane.

The EUT was set on the edge of the tabletop.

Test was made with the antenna positioned in both the horizontal and vertical planes of polarization. The measurement antenna was varied in height above the conducting ground plane to obtain the maximum signal strength.

Photographs of the set up are shown in APPENDIX 3.

### **6.3 Test conditions**

Frequency range : 30 MHz to 200 MHz (Biconical antenna)  
200 MHz to 1000 MHz (Logperiodic antenna)  
1000 MHz to 13000 MHz (Horn antenna)  
Test distance : 3 m  
EUT position : Table top  
EUT operation mode : See Clause 4.1

### **6.4 Test procedure**

The height of the measuring antenna varied between 1 and 4 m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for both vertical and horizontal antenna polarization with the Test Receiver.

The radiated emission measurements were made with the following detector function of the Test Receiver.

Test antenna was aimed at the emission source for receiving the maximum signal and always kept. (Above 1 GHz)

| Frequency       | Below 1 GHz    | Above 1 GHz *1)             |
|-----------------|----------------|-----------------------------|
| Instrument used | Test Receiver  | Test Receiver               |
| IF Bandwidth    | QP: BW 120 kHz | PK: BW 1 MHz, CAV: BW 1 MHz |

\*1) The measurement data was adjusted to a 3 m distance using the following Distance Factor.

Distance Factor: See Figure 1.

**Figure 1: Test Setup**

Below 1 GHz

Test Distance: 3 m

1 GHz to 10 GHz

**[1 GHz to 6 GHz]**

Distance Factor:  $20 \times \log (3.9 \text{ m}^* / 3.0 \text{ m}) = 2.28 \text{ dB}$

\*(Test Distance + SVSWR Volume / 2) - r = 3.9 m

Test Distance: 3 m

SVSWR Volume: 2 m

(SVSWR Volume has been calibrated based on CISPR 16-1-4.)

r: 0.1 m

**[6 GHz to 10 GHz] for No.1 Semi Anechoic Chamber**

Distance Factor:  $20 \times \log (5.9 \text{ m}^* / 3.0 \text{ m}) = 5.88 \text{ dB}$

\*(Test Distance + SVSWR Volume / 2) - r = 5.9 m

Test Distance: 5.16 m

SVSWR Volume: 1.68 m

(SVSWR Volume has been calibrated based on CISPR 16-1-4.)

r: 0.1 m

**[6 GHz to 10 GHz] for No.3 Semi Anechoic Chamber**

Distance Factor:  $20 \times \log (4.9 \text{ m}^* / 3.0 \text{ m}) = 4.27 \text{ dB}$

\*(Test Distance + SVSWR Volume / 2) - r = 4.9 m

Test Distance: 4.30 m

SVSWR Volume: 1.40 m

(SVSWR Volume has been calibrated based on CISPR 16-1-4.)

r: 0.1 m

10 GHz to 13 GHz

Distance Factor:  $20 \times \log (1.0 \text{ m}^* / 3.0 \text{ m}) = -9.54 \text{ dB}$

\*Test Distance: 1 m

- The noise levels were confirmed at each position of X, Y and Z axes of EUT to see the position of maximum noise, and the test was made at the position that has the maximum noise.

## 6.5 Test result

Summary of the test results: Pass

Test results are rounded off and limit are rounded down, so some differences might be observed.

\*Hyphens for Last Calibration Date and Cal Int (month) are instruments that Calibration is not required (e.g. software), or instruments checked in advance before use.

The expiration date of the calibration is the end of the expired month.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.

Test item:

CE: Conducted emission  
RE: Radiated emission
