

Test Report: 6W65912

Applicant: Tag Inc.
134 Avro Street
Montreal, QC
H9P 2X8

Apparatus: EVI-TAG3

FCC ID: T9R-TAG3

In Accordance With: FCC Part 15 Subpart C, 15.247
FHSS System and Digitally Modulated Radiators
902-928MHz, 2400 - 2483.5 MHz, 5725-5850MHz

Tested By: Nemko Canada Inc.
303 River Road
Ottawa, Ontario
K1V 1H2

Authorized By: 
Jin Xu, Wireless Specialist

Date: May 25, 2006

Total Number of Pages: 27

Report Summary

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 15, Subpart C. Radiated tests were conducted in accordance with ANSI C63.4-2003. Radiated emissions are made on an open area test site. A description of the test facility is on file with the FCC.

The assessment summary is as follows:

Apparatus Assessed:	EVI-TAG3
Specification:	FCC Part 15 Subpart C, 15.247
Compliance Status:	Complies
Exclusions:	None
Non-compliances:	None
Report Release History:	Original Release

Author: Jason Nixon, Telecom Specialist

Note that the results contained in this report relate only to the items tested and were obtained in the period between the date of initial receipt of samples and the date of issue of the report.

This test report has been completed in accordance with the requirements of ISO/IEC 17025.

Nemko Canada Inc. authorizes the applicant to reproduce this report provided it is reproduced in its entirety and for use by the company's employees only.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. Nemko Canada Inc. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Section 1 : Equipment Under Test

1.1 Product Identification

The Equipment Under Test was identified as follows:

EVI-TAG3

1.2 Samples Submitted for Assessment

The following samples of the apparatus have been submitted for type assessment:

Sample No.	Description	Serial No.
2	EVI-TAG3 (Track@2.404)	None
3	EVI-TAG3 (Track@2.437)	None
4	EVI-TAG3 (Track@2.472)	None
7	EVI-TAG3 (Swamp@2.437)	None

The first samples were received on: May 3, 2006

1.3 Theory of Operation

The EUT is an RFID tag used in automobiles.

1.4 Technical Specifications of the EUT

Manufacturer:	Tag Inc
Operating Frequency:	2404 – 2472MHz
Peak Output Power:	15.41dBm (0.035W)
Emission Designator	F1D
Modulation:	GFSK
Antenna Connector:	Integral
Power Source:	3.6VDC battery

Section 2 : Test Conditions

2.1 Specifications

The apparatus was assessed against the following specifications:

FCC Part 15 Subpart C, 15.247

FHSS System and Digitally Modulated Radiators

902-928MHz, 2400 - 2483.5 MHz, 5725-5850MHz

2.2 Deviations From Laboratory Test Procedures

No deviations were made from laboratory test procedures.

2.3 Test Environment

All tests were performed under the following environmental conditions:

Temperature range	:	15 – 30 °C
Humidity range	:	20 - 75 %
Pressure range	:	86 - 106 kPa
Power supply range	:	+/- 5% of rated voltages

2.4 Test Equipment

Equipment	Manufacturer	Model No.	Asset/Serial No.	Next Cal.
Spectrum Analyzer	Rohde & Schwarz	FSP	FA001920	March 17/07

COU – Cal On Use

Section 3 : Observations

3.1 Modifications Performed During Assessment

No modifications were performed during assessment.

3.2 Record Of Technical Judgements

No technical judgements were made during the assessment.

3.3 EUT Parameters Affecting Compliance

The user of the apparatus could not alter parameters that would affect compliance.

3.4 Test Deleted

No Tests were deleted from this assessment.

3.5 Additional Observations

There were no additional observations made during this assessment.

Section 4 : Results Summary

This section contains the following:

FCC Part 15 Subpart C : Test Results

The column headed 'Required' indicates whether the associated clauses were invoked for the apparatus under test. The following abbreviations are used:

- N No : not applicable / not relevant.
- Y Yes : Mandatory i.e. the apparatus shall conform to these tests.
- N/T Not Tested, mandatory but not assessed. (See section 3.4 Test deleted)

The results contained in this section are representative of the operation of the apparatus as originally submitted.

4.1 FCC Part 15 Subpart C : Test Results

Part 15	Test Description	Required	Result
15.207(a)	Powerline Conducted Emissions	N	PASS
15.209(a)	Radiated Emissions within Restricted Bands	Y	
15.247(a)(1)	Frequency hopping systems	N	
15.247(a)(2)	Systems using digital modulation techniques	Y	PASS
15.247(b)(1)	Maximum peak output power of Frequency hopping systems operating in the 2400-2483.5 MHz band and 5725-5850 MHz band	N	
15.247(b)(2)	Maximum peak output power of Frequency hopping systems operating in the 902-928 MHz band	N	
15.247(b)(3)	Maximum peak output power of systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands	Y	PASS
15.247(b)(4)	Maximum peak output power	Y	
15.247(c)(1)	Fixed point-to-point Operation with directional antenna gains greater than 6 dBi	N	
15.247(c)(2)	Transmitters operating in the 2400-2483.5 MHz band that emit multiple directional beams	N	PASS
15.247(d)	Radiated Emissions Not in Restricted Bands	Y	
15.247(e)	Power Spectral Density for Digitally Modulated Devices	Y	
15.247(f)	Time of Occupancy for Hybrid Systems	N	

Notes:

Appendix A : Test Results

Clause 15.209(a) Radiated Emissions within Restricted Bands

Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency (MHz)	Field Strength (microvolts/meter)	Measurement Distance (meters)
0.009-0.490	2400/F (kHz)	300
0.490-1.705	24000/F (kHz)	30
1.705-30.0	30	30
30-88	100	3
88-216	150	3
216-960	200	3
Above 960	500	3

Test Conditions:

Sample Number:	2, 3, 4	Temperature:	24
Date:	May 3, 2006	Humidity:	21
Modification State:	0	Tester:	Jason Nixon
		Laboratory:	OATS

Test Results:

See Attached Table for Results

Additional Observations:

The Spectrum was searched from 30MHz to 25GHz.

These results apply to emissions found in the Restricted bands defined in FCC Part 15 Subpart C, 15.205.

The EUT was measured on three orthogonal axis. The EUT was tested with a fresh new battery.

Measurements below 1GHz were performed using a Peak detector with 100kHz RBW/VBW and measurements above 1GHz were performed with a Peak detector with 1MHz RBW/VBW.

Clause 15.247(b)(3) Maximum peak output power of systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands

For systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power. Maximum Conducted Output Power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signalling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements. The average must not include any time intervals during which the transmitter is off or is transmitting at a reduced power level. If multiple modes of operation are possible (e.g., alternative modulation methods), the maximum conducted output power is the highest total transmit power occurring in any mode.

Test Conditions:

Sample Number:	2, 3, 4	Temperature:	21
Date:	May 5, 2006	Humidity:	24
Modification State:	0	Tester:	Jason Nixon
		Laboratory:	Wireless

Test Results:

Channel Frequency (MHz)	Power Output (dBm)
2404	13.08
2437	13.50
2472	15.41

Additional Observations:

All Measurements were performed using FCC Measurement of DTS procedures (March 23, 2005) Power Output Option 2, Method #1.

2404 Output Power

Output Power - Low Channel

Date: 5.MAY.2006 17:48:49

2437 Output Power

Output Power

Date: 5.MAY.2006 17:00:14

2472 Output Power

Output Power - High Channel

Date: 5.MAY.2006 17:29:52

Clause 15.247(b)(4) Maximum peak output power

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

Test Conditions:

Sample Number:	2, 3, 4	Temperature:	24
Date:	May 3, 2006	Humidity:	21
Modification State:	0	Tester:	Jason Nixon
		Laboratory:	OATS

Test Results:**Radiated Output Power:**

Ch.	Freq.	Pol V/H	ANT.	Rx dBuV	Ant Factor dB/m	Cable loss dB	F.S. dBuV/m
low	2404.0000	Horn1	V	84.8	28.8	4.9	118.5
	2404.0000	Horn1	H	85.7	28.8	4.9	119.4
mid	2437.0000	Horn1	V	85.7	28.8	5.0	119.4
	2437.0000	Horn1	H	86.0	28.8	5.0	119.8
hi	2472.0000	Horn1	V	81.7	28.8	5.0	115.5
	2472.0000	Horn1	H	83.5	28.8	5.0	117.4

Measured value (V/m) = $10^{(FS/20)} = 0.977237221\text{V/m}$

Output Power (W) = $\frac{E^2 R^2}{30} = 0.286\text{W} = 24.6\text{dBmEIRP}$

Limit = 36dBmEIRP

E = Measured Value (V/m)

R = Measurement distance

Additional Observations:

All Measurements were performed at 3m using a 1MHz RBW/VBW.

Clause 15.247(d) Radiated Emissions Not in Restricted Bands

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

Test Conditions:

Sample Number:	2, 3, 4	Temperature:	24
Date:	May 3, 2006	Humidity:	21
Modification State:	0	Tester:	Jason Nixon
		Laboratory:	OATS

Test Results:

See Attached Table and Plots.

Additional Observations:

The Spectrum was searched from 30MHz to 25GHz.

The EUT was measured on three orthogonal axis. The EUT was tested with a fresh new battery.

All emissions comply with the general limits of 15.209.

Measurements below 1GHz were performed using a Peak detector with 100kHz RBW/VBW and measurements above 1GHz were performed using a Peak detector with 1MHz RBW/VBW.

Clause 15.247(e) Power Spectral Density for Digitally Modulated Devices

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission. This power spectral density shall be determined in accordance with the provisions of paragraph (b) of this section. The same method of determining the conducted output power shall be used to determine the power spectral density.

Test Conditions:
