2.1.5 Test Procedure

The test was performed in accordance with ANSI C63.10, clause and 6.6, 6.9.2 and 7.5.

The transmissions from this EUT are considered to be pulsed and therefore peak only measurements have been performed. In order to determine the average values, a duty cycle correction factor has been determined by the following equation:

$$\text{duty (dB)} = 20 \log((\text{On Time} + \text{Off Time}) / \text{On Time}).$$

This correction factor has been subtracted from the peak measurements to determine the average values.
