3.3 Description of modification for Modification Filing

Not Applicable.

3.4 Comments

The channels are selected with a test box that submitted by the manufacturer. The measurements are performed at channels near top 450MHz, near middle 455MHz and near bottom 460MHz for FCC1, and for FCC2 near top 460MHz, near middle 465MHz and near bottom 470MHz. The EUTs complies at these channels.

See page 80 to 81 for modulated spectrum.

The differences between the FCC1 and FCC2 are as follows:

- out-put filter (given in bill of materials).
- software.

3.5 Family List Rational

4 TEST RESULTS

4.1 Occupied bandwidth

Para. No.: 90.217(b)

Test Results: Complies

Test Performed By: G.Suwanthakumar	Date of Test: 23 – 26 May 2005
------------------------------------	--------------------------------

The EUT is designed to operate with a 12.5kHz or 25kHz channel bandwidth. The measured emissions at ± 25 kHz from assigned frequency is 40 dB below the unmodulated carrier.

$$B_n = 2M + 2DK$$

Where: B_n = Necessary Bandwidth

M = Maximum modulation frequency

For Data transmission, $M = B/2$, Where: B = Modulation rate in Baud

D = Peak deviation, K = Constant, For Data transmission this is typically 1.2

12.5kHz:

FSK, 2400bps with 2,5 kHz deviation

We have $B=9.6$, $D=2.5$, $K=1.2$ and

$B_n = 2,4 + 2 \times 2.5 \times 1.2 = 8,4$ kHz see plots on page 85 & 86 of the test report

25kHz:

FSK, 9600bps with 4.7 kHz deviation

We have $B=9.6$, $D=4,7$, $K=1.2$ and

$B_n = 9.6 + 2 \times 2.5 \times 1.2 = 20.88$ kHz see plots on page 87 to 88 of the test report.

The measurements are performed with voltages minimum (6.0Vdc). Nominal(7.2Vdc) and maximum (9.1Vdc). The temperature from -30 ° C to +60 ° C, with 10 ° C step.

Requirement:

For equipment designed to operate with a 12.5 kHz channel bandwidth, the sum of the bandwidth occupied by the emitted signal plus the bandwidth required for frequency stability shall be adjusted so that any emission appearing on a frequency 25 kHz or more removed from the assigned frequency is attenuated at least 30 dB below the unmodulated carrier.
