Objectives

- Antenna customization for 2.4, 5 and 6 GHz AP (2x2 - 5GHz, 2x2 - 6GHz and 2X2 - 2.4 GHz)
- Measurement with the antenna system and device (With updated 6GHz antenna).

Antenna Measurement Setup Details

Anechoic Chamber (700MHz – 7.5GHz)

General Specification	
Frequency Range	700MHz-7.5GHz
Attenuation	< 60dB
Tx and Rx antenna separation	12 meters

Shielding Effectiveness	
Frequency Range	700MHz-7.5GHz
Shielding Effectiveness	>80dB
Test Procedure Standard	STD-IEEE-299/ MIL STD 285
Size available for shielding shall	15.5m x 4m x 4m

Other Specification	
Quiet Zone Size	50-80cm x 50-80cm x 50-80cm @Throughout Band
Test Zone Quietness* (in dB)	>-38 @700MHz >-44 @2GHz >-48 @7.5GHz

Motor Specification	
Position Accuracy	0.5 degree
Positioner Movement	Azimuth (AZ) = 360° rotation
	Elevation (EL) = ±90°
	Polarization Axis = 360°

VNA Specification	
Model	ZNB40
Manufacturer	Rohde & Schwarz
Operating Frequency Range	100 kHz to 40 GHz
No of Port	4

Measured Antenna Efficiency

Antenna radiation efficiency (η) is the ratio of radiated power to input power, given by $\eta=G/D$, where G is the gain and D is the directivity.

2.4 GHz

Frequency(GHz)	Efficiency(dB)		Efficiency(%)	
	Ant 1	Ant 2	Ant 1	Ant 2

Pros & Cons Comparison

Stamped Metal	PCB
For both planes (XZ/YZ) the partners will be uniform	For one plane (XZ/YZ) radiation levels will be more and for another plane it will be less near to ceiling
At broadside, the gain will be less (Standard nature of stamped monopoles)	At Broadside gain will be more (Nature of dipole with flat reflector)
Results in good areal coverage around the ceiling plane.	Around the ceiling plane power level are less (XY plane which comes across the roof)
Antenna material is metallic (Sheet metal tool)	PCB based radiator (Spacer tool will be used for mounting)
Unable to achieve 4KQAM within 1 meter of range due to low power at broadside. (Able to achieve at extreme close proximity)	Able to achieve 4KQAM

Pattern Comparison

Conclusion

- 2.4, 5 and 6 GHz customised antennas are designed and measured.
- All 6 antennas were placed on a 172 X 172 mm metallic plate.
- The placement is optimised for better isolation and radiation performance.
- The return loss and VSWR are meeting the specs.
- The gain of the antennas are as per simulated results.
- Isolation between antennas are as below:
 - Less than -25 dB between 6 GHz Antennas
 - Less than -25 dB between 5 GHz Antennas
 - Less than -20 dB between 2.4 GHz Antennas
 - Less than -20 dB between 5 GHz-6 GHz , 5 GHz-2.4 GHz and 2.4 GHz-6 GHz Antennas
