

Operation Description

1. Install 8 Ni-H batteries into the transmitter, and make sure the power LED is on when press button.
2. If need, connect the lithium battery to the charging connector of the transmitter. Press charge button and hold the battery by other hand. When yellow circle turn orange charge is OK.
3. Put the lithium battery into the flying receiver. Find a large area to fly. Press the button and the motor of the receiver will turn on. Try the Right/Left control stick.
4. After about 20 minutes flying, the lithium battery exhausted. The charging connector can be used to charge again.
