3.3 Description of modification for Modification Filing

Not Applicable.

3.4 Comments

This test report covers only the Bluetooth Module integrated into the Nera Satcom WorldPro 1000.

The channels and antenna to operate on was selected from a computer connected to the satellite telephone. The computer was used only for selection of channel and antenna and was removed during the measurements.

The measurements were done with the EUT powered by 115 V AC. It was checked that power variations between 85% and 115% did not have any influence on the measurements.

All ports were populated during spurious emission measurements.

3.5 Family List Rational

Measurement Data: /

Requirements:

The channel frequencies shall be selected from a pseudorandom ordered list of hopping frequencies. Each frequency must be used equally by the transmitter.

4.6 Peak Power Output

Para. No.: 15.247 (b)

Test Performed By: Frode Sveinsen

Date of Test: 2-3 November 2005

Test Results: Complies

Measurement Data:

Maximum Conducted Peak Output Power, Watts

RF channel	0	38	78
Measured value	0.000966	0.000804	0.000604

Maximum EIRP, Watts

RF channel	0	38	78
Measured EIRP	0.000106	0.000109	0.000079
Antenna gain dBi	-9.6	-8.7	-8.8

Antenna gain = $10 \cdot \log(\text{EIRP} / \text{Conducted power})$ dBi

The EIRP is calculated from measured field strength by the formula:

$$P = (E \cdot d)^2 / 30 \quad (\text{the formula in DA00-705 with antenna gain 0 dBi})$$

See attached graph.
