TEST REPROT CERTIFICATION

Applicant : Enustech,.Inc

Adderss : JnJ Bldg,5th Yeoksam 2-dong,785-12,Gangnam_gu,Seoul,
Republic of Korea

EUT Name : imFONE CP

Model No. : CP100L

Serial No. : Engineering Sample

FCCID : TT2CP100L

Testing location : Nex1 Future Co., Ltd.
133, Kongdan-Dong, Gumi-City, Kyeongsangbuk-Do, 730-030, R.O.K

Applied specification : FCC Part 15

Test result : The above mentioned test item passed.

Test Date July 10, 2006 **Review Date** July 10, 2006

Tested by Hyo-Jeung, Cho **Reviewed by** Jeong-Hi, Jin

Title Engineer **Title** EMC Manager

4. EUT Description and Operational Description

* Description

ImFONE CP is a cordless internet phone which you can use as an internet phone in conjunction with your PC. With this easy to install phone by and its stylish, mobile phone-like design, you can place a crystal clear phone call through the internet network.

The small, lightweight design is perfect for VoIP(Internet Phone) service at home or in the office. imFONE CP is a wireless client device for VoIP (Internet Phone) service running on your PC. You can also select from buddy list or dial directly using the keypad to make the call. ImFONE CP lets you make internet phone calls, through internet phone programs such as SKYPE or imTEL or Naver (Korean version internet phone solution)

Long range 2.4GHz wireless technology allows to you use your imFONE CP up to a distance of 30 meters to provide you maximum freedom, control and flexibility.

Equipped with a built-in laser pointer, imFONE CP also functions as a wireless presenter. You can navigate through your presentation pages using the arrow key of the keypad.

* Features

- ① Free internet phone calls between VoIP Softphone buddies
- ② Crystal clear sound through echo cancellation
- ③ Making calls/ Receiving calls
- ④ Multi-functions
- ⑤ Conference and video call functionality

* Specifications

- Bluetooth® Qualified: Bluetooth Ver. 1.2 Compliant (Class1)
- Radio Frequency Range: 2.402 ~ 2.480 GHz
- Transmit Power & Receive Sensitivity: 20dBm(Typical 17dBm), -85dBm
- Service Distance: Up to 50 meters (164feet) on an open field
- Service Profile: Cordless Telephone Profile
- Security: 56 bit encryption
- Display: 32X128 pixels, Monochrome

- Power Source: Battery-Rechargeable 840mA Lithium-Ion Polymer
 - Charger-USB charger (Current:460mA/h, Voltage:4.6~5.0V DC)
 - TTA 24pin standard charger (for mobile phone)
- Charging Time: USB Charger-3 hours
 - ※ TTA 24pin standard charger(for mobile phone): 2.5 hours
 - ※ Charging time can depend on the PC's system capacity.
- Operating Time: Standby-Up to 38 hours
 - Talk Time-Up to 8 hours
- System Requirements: 2000/XP

5. Test Set-up

5.1 Principle of configuration

Conducted : The equipment under test (EUT) was configured with a temporary SMA Connector and EUT transmits the related packet type with PRBS 9 as payload.

Emission:The equipment under test (EUT) was configured to measure its highest possible radiation level. The test modes and test settings were adapted accordingly in reference to the instructions for use.

For details, please refer to the Operation mode in chapter 7.

5.2 Operational Modes

Page Scan,

Inquiry Scan

Hopping Mode

Fixed mode (2402Mhz, 2441Mhz and 2480Mhz)

5.3 Applied Specification

FCC Part 15

* Note1: C: Complies, Pass: Passed, Fail : Failed and NA : Not Applicable

7. Test Results

7.1 Antenna Connector Requirements

Requirements

Subclause 15.203 and 15.204(c)

According to the Part 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section.

The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

And according to the Part 15.204(c), only the antenna with which an intentional radiator is authorized may be used with the intentional radiator.

Test results

RESULT:

Complies

The antenna is permanently attached on the PCB.

The EUT has a Chip Antenna soldered to the circuit board.

For more information on the antenna:

Antenna gain	: 0 dBi
Manufacturer	: AMOTECH Co., Ltd.
Model No.	: ALA931
Type	: Surface Chip Antenna

7.2 AC Connected Emission

Test Mode and conditions

The power is supplied by a USB port.

Requirements

Subclause 15.107&15.207(a)

For an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a 50 μ H/50 ohms line impedance stabilization network (LISN).

Frequency of Emission (M Hz)	Conducted Limit (dB μ V)	
	Quasi-peak	Average
0.15-0.5	66-56*	56-46*
0.5-5	56	46
5-30	60	50

* Decreases with the logarithm of the frequency.

Test results

Frequency (MHz)	Insertion Loss	Cable Loss	Pol.	Quasi-Peak[dBuV]			Average[dBuV]			Margin[dBuV]

7.3 Carrier Frequency Separation

Test Mode and conditions

Mode of operation : Tx mode (hopping on), DH1 packet with PRBS9 payload
Measurement Method : Conducted
Detector : PK
Trace : Max hold
RBW/VBW : 100kHz/300kHz

Requirements

Subclause 15.247(a)(1)

Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25kHz or the 20dB bandwidth of the hopping channel, whichever is greater.

Test results

Reference frequency (MHz)	Channel Separation (kHz)	Limit	Results
2441.000	990.0	Minimum of 25kHz or the 20dB bandwidth	Pass

Carrier Frequency Separation Plot

Date: 6.JUL.2006 17:43:32

7.4 Time of Occupancy(Dwell time)

Test Mode and conditions

Mode of operation : Hopping on , DH5 packet with PRBS9 payload
Measurement Method : Conducted
Detector : PK
Trace : Max hold
RBW/VBW : 1MHz/300kHz

Requirements

Subclause 15.247(a)(1)(iii)

Frequency hopping systems in the 2400 – 2483.5 MHz band shall use at least 75 hopping frequencies. The average time of occupancy on any frequency shall not be greater than 0.4 seconds within a 30 second period.

Test results

The system makes 1600 hops per second or has a length of 625us.

Let take DH5 packet in worst case. A DH5 packet has 5 slots for transmitting and 1 slot for receiving. It means it can have maximum 266.67 ($=1600/6$) hops per second.

Therefore it has 3.38 hops($=266.67/79$) per second for each channel.

And it has 106.81hops appearance for 31.6 seconds ($= 0.4 \times 79 \text{ channels}$).

Length per slot(L)	Number slots (N)	Dwell Time (=L*N)	Limit	Results
2.91ms	106.81	310.8171ms	0.4 seconds	Pass

Time of Occupancy Plot

Date: 6.JUL.2006 17:12:45

7.5 20dB Bandwidth

Test Mode and conditions

Mode of operation : Tx mode (2402MHz, 2441MHz, 2480MHz),
DH5 packet with PRBS9 payload
Measurement Method : Conducted
Detector : PK
Trace : Max hold
RBW/VBW : 30kHz/100kHz

Requirements

Subclause 15.247(a)(1)

It is mentioned implicitly as the maximum 20dB bandwidth of the hopping channel is 1Mhz.

Test results

Operating frequency (MHz)	20dB Bandwidth (MHz)	Limit	Results
2402	0.676	< 1 Mhz	Pass
2441	0.696	< 1 Mhz	Pass
2480	0.696	< 1 Mhz	Pass

20dB Bandwidth Plot – 2402Mhz

Date: 6.JUL.2006 17:28:20

20dB Bandwidth Plot – 2441Mhz

Date: 6.JUL.2006 17:31:40

20dB Bandwidth Plot – 2480Mhz

Date: 6.JUL.2006 17:33:19

7.6 Number of Hopping Frequencies Requirements

Test Mode and conditions

Mode of operation : Hopping, DH1 with PRBS9 payload
Measurement Method : Conducted
Detector : PK
Trace : Max hold
RBW/VBW : 100kHz/100kHz

Requirements

15.247(a)(1)(iii)

Frequency hopping systems in the 2400-2483.5 Mhz band shall use at least 15 non-overlapping Channels.

Test results

Operating frequency (MHz)	Number of Hopping	Limit	Results
2402~2480	79	≥ 15	Pass

Number of Hopping Frequencies Plot

Date: 6.JUL.2006 17:38:55

7.7 Pseudorandom FHS and Equal Hopping Frequency use Requirements

Requirements

Subclause 15.247 (a)(1)

The system shall hop to channel frequencies that are selected at the system hopping rate from a pseudorandomly ordered list of hopping frequencies. Each frequency must be used equally on the average by each transmitter.

RESULT

Complies

The channel is represented by a pseudo-random hopping sequence hopping through the 79 RF channels. The hopping sequence is unique for the piconet and is determined by the Bluetooth device address of the master. For details, refer to the figure 1. The X input determines the phase in the 32-hop segment, whereas Y1 and Y2 selects between master-to-slave and slave-to-master transmission. The inputs A to D determine the ordering within the segment, the inputs E and F determine the mapping onto the hop frequencies.

The algorithm in the Bluetooth specifications shows the each of its hopping channels is used equally on average also.

< Figure 1 : Block diagram of hop selection kernel for 79 hop system >

7.8 Receiver Input Bandwidth Requirements

Requirements

Subclause 15.247 (a)(1)

The system receivers shall have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shall shift frequencies in the synchronization with the transmitted signals.

RESULT

Complies

The receiver bandwidth is equal to the receiver bandwidth in the 79 hopping channel mode, which is 1 MHz. The receiver bandwidth is indirectly verified during Bluetooth RF conformance testing.

7.9 Peak Output Power

Test Mode and conditions

Mode of operation : Tx mode (2402MHz, 2441MHz, 2480MHz),
DH1 packet with PRBS 9 payload
Measurement Method : Conducted
Detector : PK
Trace : Max hold
RBW/VBW : 1MHz/3MHz

Requirements

Subclause 15.247(b)(1)

For frequency hopping systems operating in the 2400~2483.5 Mhz band employing at least 75hopping channels, the maximum output power of the intentional radiator shall not exceeded 1 watt.

Test results

Operating Frequency (MHz)	Reading (dBm)	Cable attenuation (dB)	Actual Value (W)	Limit (W)	Results
2402	13.20	1.80	0.031622777	<1.0	Pass
2441	13.08	1.83	0.030974200	<1.0	Pass
2480	13.47	1.85	0.034040819	<1.0	Pass

7.10 Band-edge Compliance

Test Mode and conditions

Mode of operation : Tx mode (2402MHz, 2441MHz, 2480MHz), DH1 packet
Measurement Method : Conducted
Detector : PK
Trace : Max hold
RBW/VBW : 300kHz/1.0MHz

Requirements

Subclause 15.247(c)

In any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required.

Test results

There is no peak found outside any 100kHz bandwidth of the operating frequency band in the three transmit frequency.

Tx Frequency (MHz)	RF power outside 100kHz BW (MHz)	Limit	Results
2402	No peak above 20dB	20dB below	Pass
2441	No peak above 20dB	20dB below	Pass
2480	No peak above 20dB	20dB below	Pass

7.11 Spurious Conducted emissions

Test Mode and conditions

Mode of operation : Tx mode (2402MHz, 2441MHz, 2480MHz), DH1 packet
 Measurement Method : Conducted
 Detector : PK
 Trace : Max hold
 RBW/VBW : 100kHz/300kHz

Requirements

Subclause 15.109&15.247(c)

In any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required.

7.12 Spurious Radiated emissions

Test Mode and conditions

Mode of operation : Tx mode (2402MHz, 2441MHz, 2480MHz),
DH1 packet
Detector : PK
Trace : Max hold
Measurement Method : Radiated- Enclosure
Measurement Distance : 3m
Measurement BW : 1 MHz for $f \geq 1 \text{ GHz}$, 100kHz for $f < 1 \text{ GHz}$

Requirements

Subclause 15.247(c)

In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).

According to Section 15.209(a), except as provided elsewhere in this Subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency (MHz)	Field strength (microvolts/meter)	Field strength (dB μ V/m)	Measurement distance (meters)
30-88	100**	$20 \cdot \log(100) = 40.0$	3
88-216	150**	$20 \cdot \log(150) = 43.5$	3
216-960	200	$20 \cdot \log(200) = 46.0$	3
960-2500	500	$20 \cdot \log(500) = 54.0$	3

** Except as provided in paragraph(g), fundamental emissions from intentional radiators operating under this Section shall not be located in the frequency bands 54-72MHz, 76-88MHz, 174-216MHz or 470-806MHz. However, operation within these frequency bands is permitted under other sections of this Part, e.g., Sections 15.231 and 15.241.

According to section 15.35(b), on any frequency or frequencies above 1000 MHz the radiated limits shown are based upon the use of measurement instrumentation employing an average detector function. When average radiated emission

measurements are specified in this part, including emission measurements below 1000 MHz, there also is a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20 dB above the maximum permitted average limit for the frequency being investigated

Test results

			A	P	A	P	A	P		
Operating frequency : 2402Mhz										
4804	V	16.3	45.5	57.5	54	74	8.5	16.5	320	1.4
4804	H	16.3	45.9	57.9	54	74	8.1	16.1	210	1.4

Frequency (MHz)	Polariz- ation (H/V)	Corr. Factor (dB)	Result (dBuV/m)		Limit (dBuV/m)		Margin (dB)		Table Angle (Deg.)	Ant. Height (m)
			A	P	A	P	A	P		
Operating frequency : 2441Mhz										
4882	V	16.4	45.8	58.2	54	74	8.2	15.8	320	1.4
4882	H	16.4	46.5	59.7	54	74	7.5	14.3	210	1.4

Frequency (MHz)	Polarization (H/V)	Corr. Factor (dB)	Result (dBuV/m)		Limit (dBuV/m)		Margin (dB)		Table Angle (Deg.)	Ant. Height (m)
			A	P	A	P	A	P		
Operating frequency : 2480Mhz										
4960	V	16.4	45.8	58.1	54	74	8.2	15.9	320	1.4
4960	H	16.4	46.2	58.7	54	74	7.8	15.3	210	1.4

Note :

1. Remark “*” means that the emission frequency is produced by local oscillator.
2. Remark “-” means that the emission level is too low to be measured.
3. The measurement uncertainty of the radiated emission test is $\pm 3\text{dB}$
4. “A” and “P” mean average and peak measurement respectively.
5. There are no spurious emissions found between the lowest internal oscillating frequency and 30 MHz.

8. List of Test and Measurement Instruments

	Kind of Equipment	Type	Manufacturer	S/N
☒	EMI Test Receiver	ESI26	R/S	8340.0010.02
☒	Spectrum Analyzer	FSP30	R/S	1093.4495.30
☐	Tracking Generator	ESMI-B1	R/S	1033.3240.52
