

3.1 Part Tx work principle

When pressing the key (BACK, FRONT, LEFT, RIGHT), the circuit will produce AM signal. The signal will be amplified and transmitted after added in 49.860MHz carrier wave.

3.2 Part Rx work principle

Receiver receives TX signal and then process it, sending directive and controlling motor.

4、Function describe

All toy function can be shown by the remoter which remote distance is no less than 20 meters.
