Section 1 : Equipment Under Test

1.1 Product Identification

The Equipment Under Test was identified as follows:

Item #1, Ground Station Collector (GSC), S/N: GSC-003

1.2 Samples Submitted for Assessment

The following samples of the apparatus have been submitted for type assessment:

Sample No.	Description	Serial No.
#1	Ground Station Collector (GSC)	GSC-003

The first samples were received on: February 06, 2006

1.3 Theory of Operation

The short-range system operates in the 916.5MHz band using OOK modulation at 19,200 baud. Once every 15 minutes, the RST wakes up and measures the temperature of the base to which it is affixed and transmits this temperature and its battery voltage digitally to the GSC receiver. The RST is in sleep mode between transmissions to extend battery life.

The GSC time stamps the data and stores it in memory. 2048 data sets can be stored.
