

## TEST REPORT

**Product** : Digital Blood Pressure Monitor  
**Trade mark** : *microlife*  
**Model/Type reference** : BP3KF1-3B,BP3KT1-4B  
**Serial Number** : N/A  
**Report Number** : EED32N81315701  
**FCC ID** : U7I-BP3KF1-3B  
**Date of Issue** : Jan. 19, 2022  
**Test Standards** : 47 CFR Part 15 Subpart C  
**Test result** : PASS

Prepared for:

### 3 Test Summary

| Test Item                                     | Test Requirement                                   | Result |
|-----------------------------------------------|----------------------------------------------------|--------|
| Antenna Requirement                           | 47 CFR Part 15 Subpart C Section 15.203/15.247 (c) | PASS   |
| AC Power Line Conducted Emission              | 47 CFR Part 15 Subpart C Section 15.207            | PASS   |
| DTS Bandwidth                                 | 47 CFR Part 15 Subpart C Section 15.247 (a)(2)     | PASS   |
| Maximum Conducted Output Power                | 47 CFR Part 15 Subpart C Section 15.247 (b)(3)     | PASS   |
| Maximum Power Spectral Density                | 47 CFR Part 15 Subpart C Section 15.247 (e)        | PASS   |
| Band Edge Measurements                        | 47 CFR Part 15 Subpart C Section 15.247(d)         | PASS   |
| Conducted Spurious Emissions                  | 47 CFR Part 15 Subpart C Section 15.247(d)         | PASS   |
| Radiated Spurious Emission & Restricted bands | 47 CFR Part 15 Subpart C Section 15.205/15.209     | PASS   |

**Remark:**

Company Name and Address shown on Report, the sample(s) and sample Information were provided by the applicant who should be responsible for the authenticity which CTI hasn't verified.

Model/Type reference:BP3KF1-3B,BP3KT1-4B.

Only the model BP3KF1-3B was tested,confirm that any of our production units bearing the following model numbers are identical in circuitry and electrical, mechanical and PCB layouts; the only differences are the model name,dimension and the construction of appearance for trading purpose.

## 4 General Information

### 4.1 Client Information

|                          |                                                                                            |
|--------------------------|--------------------------------------------------------------------------------------------|
| Applicant:               | Microlife Corporation                                                                      |
| Address of Applicant:    | 9F, 431, RuiGuang Road, NeiHu Taipei 11492, Taiwan                                         |
| Manufacturer:            | ONBO Electronic (Shenzhen) Co., Ltd.                                                       |
| Address of Manufacturer: | No.138, Huasheng Road, Langkou Community, Dalang Street, Longhua District, Shenzhen, China |
| Factory:                 | ONBO Electronic (Shenzhen) Co., Ltd.                                                       |
| Address of Factory:      | No.138, Huasheng Road, Langkou Community, Dalang Street, Longhua District, Shenzhen, China |

### 4.2 General Description of EUT

|                                  |                                                                             |
|----------------------------------|-----------------------------------------------------------------------------|
| Product Name:                    | Digital Blood Pressure Monitor                                              |
| Model No.(EUT):                  | BP3KF1-3B                                                                   |
| Trade mark:                      | <i>microlife</i>                                                            |
| EUT Supports Radios application: | 2402MHz to 2480MHz                                                          |
| Power Supply:                    | AC Adapter:100~240V-50/60Hz 0.3A<br>OUTPUT:6V---0.6A<br>Battery: 4xAAA 1.5V |
| Sample Received Date:            | Dec. 07, 2021                                                               |
| Sample tested Date:              | Dec. 07, 2021 to Dec. 15, 2021                                              |

### 4.3 Product Specification subjective to this standard

|                        |                                     |
|------------------------|-------------------------------------|
| Operation Frequency:   | 2402MHz~2480MHz                     |
| Modulation Technique:  | DSSS                                |
| Modulation Type:       | GFSK                                |
| Number of Channel:     | 40                                  |
| Test Power Grade:      | Default                             |
| Software Version:      | nRFgo Studio                        |
| Antenna Type and Gain: | Type: Ceramic antenna<br>Gain: 0dBi |
| Test Voltage:          | AC 120V                             |

| Operation Frequency each of channel |           |         |           |         |           |         |           |
|-------------------------------------|-----------|---------|-----------|---------|-----------|---------|-----------|
| Channel                             | Frequency | Channel | Frequency | Channel | Frequency | Channel | Frequency |
| 0                                   | 2402MHz   | 10      | 2422MHz   | 20      | 2442MHz   | 30      | 2462MHz   |
| 1                                   | 2404MHz   | 11      | 2424MHz   | 21      | 2444MHz   | 31      | 2464MHz   |
| 2                                   | 2406MHz   | 12      | 2426MHz   | 22      | 2446MHz   | 32      | 2466MHz   |
| 3                                   | 2408MHz   | 13      | 2428MHz   | 23      | 2448MHz   | 33      | 2468MHz   |
| 4                                   | 2410MHz   | 14      | 2430MHz   | 24      | 2450MHz   | 34      | 2470MHz   |
| 5                                   | 2412MHz   | 15      | 2432MHz   | 25      | 2452MHz   | 35      | 2472MHz   |
| 6                                   | 2414MHz   | 16      | 2434MHz   | 26      | 2454MHz   | 36      | 2474MHz   |
| 7                                   | 2416MHz   | 17      | 2436MHz   | 27      | 2456MHz   | 37      | 2476MHz   |
| 8                                   | 2418MHz   | 18      | 2438MHz   | 28      | 2458MHz   | 38      | 2478MHz   |
| 9                                   | 2420MHz   | 19      | 2440MHz   | 29      | 2460MHz   | 39      | 2480MHz   |

Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Channel                    | Frequency |
|----------------------------|-----------|
| The lowest channel (CH0)   | 2402MHz   |
| The middle channel (CH19)  | 2440MHz   |
| The highest channel (CH39) | 2480MHz   |

## 4.4 Test Configuration

| EUT Test Software Settings:                                                                                                 |            |                                                                                    |         |                |
|-----------------------------------------------------------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------|---------|----------------|
| Software:                                                                                                                   |            | nRFgo Studio (manufacturer declare)                                                |         |                |
| EUT Power Grade:                                                                                                            |            | Class2 (Power level is built-in set parameters and cannot be changed and selected) |         |                |
| Use test software to set the lowest frequency, the middle frequency and the highest frequency keep transmitting of the EUT. |            |                                                                                    |         |                |
| Test Mode                                                                                                                   | Modulation | Rate                                                                               | Channel | Frequency(MHz) |
| Mode a                                                                                                                      | GFSK       | 1Mbps                                                                              | CH0     | 2402           |
| Mode b                                                                                                                      | GFSK       | 1Mbps                                                                              | CH19    | 2440           |
| Mode c                                                                                                                      | GFSK       | 1Mbps                                                                              | CH39    | 2480           |

## 4.5 Test Environment

| Operating Environment:       |            |
|------------------------------|------------|
| Radiated Spurious Emissions: |            |
| Temperature:                 | 22~25.0 °C |
| Humidity:                    | 50~55 % RH |
| Atmospheric Pressure:        | 1010mbar   |
| RF Conducted:                |            |
| Temperature:                 | 22~25.0 °C |
| Humidity:                    | 50~55 % RH |
| Atmospheric Pressure:        | 1010mbar   |
| Conducted Emissions:         |            |
| Temperature:                 | 22~25.0 °C |
| Humidity:                    | 50~55 % RH |
| Atmospheric Pressure:        | 1010mbar   |

#### 4.6 Description of Support Units

The EUT has been tested with associated equipment below.

| Associated equipment name |          | Manufacture | model     | S/N serial number | Supplied by | Certification |
|---------------------------|----------|-------------|-----------|-------------------|-------------|---------------|
| AE                        | Notebook | DELL        | DELL 3490 | D245DX2           | CTI         | CE&FCC        |

#### 4.7 Test Location

All tests were performed at:

Centre Testing International Group Co., Ltd

Building C, Hongwei Industrial Park Block 70, Bao'an District, Shenzhen, China

Telephone: +86 (0) 755 33683668 Fax: +86 (0) 755 33683385

No tests were sub-contracted.

FCC Designation No.: CN1164

#### 4.8 Measurement Uncertainty (95% confidence levels, k=2)

| No. | Item                            | Measurement Uncertainty |
|-----|---------------------------------|-------------------------|
| 1   | Radio Frequency                 | $7.9 \times 10^{-8}$    |
| 2   | RF power, conducted             | 0.46dB (30MHz-1GHz)     |
|     |                                 | 0.55dB (1GHz-18GHz)     |
| 3   | Radiated Spurious emission test | 3.3dB (9kHz-30MHz)      |
|     |                                 | 4.3dB (30MHz-1GHz)      |
|     |                                 | 4.5dB (1GHz-18GHz)      |
|     |                                 | 3.4dB (18GHz-40GHz)     |
| 4   | Conduction emission             | 3.5dB (9kHz to 150kHz)  |
|     |                                 | 3.1dB (150kHz to 30MHz) |
| 5   | Temperature test                | 0.64°C                  |
| 6   | Humidity test                   | 3.8%                    |
| 7   | DC power voltages               | 0.026%                  |

| <p>15.203 requirement:<br/>An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.</p> <p>15.247(b) (4) requirement:<br/>The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.</p> |                                        |
| <b>EUT Antenna:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Please see Internal photos             |
| The antenna is Ceramic antenna. The best case gain of the antenna is 0dBi.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                        |

## 6.2 AC Power Line Conducted Emission

| Test Requirement:     | 47 CFR Part 15C Section 15.207                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |           |  |                       |              |  |            |         |          |           |           |       |    |    |      |    |    |

| Test Procedure:       | <ol style="list-style-type: none"><li>1) The mains terminal disturbance voltage test was conducted in a shielded room.</li><li>2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a 50Ω/50μH + 5Ω linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.</li><li>3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane,</li><li>4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.</li><li>5) In order to find the maximum emission, the relative positions of</li></ol> |           |  |                       |              |  |            |         |          |           |           |       |    |    |      |    |    |

|                        | equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted measurement.       |
| Exploratory Test Mode: | Non-hopping transmitting mode with all kind of modulation and all kind of data type at the lowest, middle, high channel. |
| Test Results:          | Pass                                                                                                                     |

## Measurement Data

An initial pre-scan was performed on the live and neutral lines with peak detector.

Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected.

Neutral line:

Remark:

1. The following Quasi-Peak and Average measurements were performed on the EUT:
2. Final Test Level = Receiver Reading + LISN Factor + Cable Loss.
3. If the Peak value under Average limit, the Average value is not recorded in the report.

| Test Method:      | ANSI C63.10 2013                                                                                                                                                                                                                                                                                                                                                                        |
| Test Setup:       |  <p>Remark: Offset=Cable loss+ attenuation factor.</p>                                                                                                                                                                                                                                                |
| Test Procedure:   | <ul style="list-style-type: none"> <li>a) Set RBW =100KHz.</li> <li>b) Set VBW = 300KHz.</li> <li>c) Sweep time = auto couple.</li> <li>d) Detector = peak.</li> <li>e) Trace mode = max hold.</li> <li>f) Allow trace to fully stabilize.</li> <li>g) Use peak marker function to determine the peak amplitude level.</li> </ul>                                                       |
| Limit:            | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. |
| Test Mode:        | Refer to clause 5.3                                                                                                                                                                                                                                                                                                                                                                     |
| Test Results:     | Refer to Appendix A                                                                                                                                                                                                                                                                                                                                                                     |

## 6.7 Radiated Spurious Emission & Restricted bands

|                                                                                                                                                                                                                                                                             |                                                  |                                     |                   |            |                             |

| Note: 15.35(b), Unless otherwise specified, the limit on peak radio frequency emissions is 20dB above the maximum permitted average emission limit applicable to the equipment under test. This peak limit applies to the total peak emission level radiated by the device. |                                                  |                                     |                   |            |                             |
