Test Result : PASS

Test Data:

Period = 0.4 sec x 79 channel = 31.6 sec

DH1 Mode:

The Bluetooth system hops at a rate of 1600 times per second. This means there are 1600 timeslots in one second. The DH1 data rate operates on a one-slot transmission and one-slot receiving basis. Thus there are $1600/(1+1) = 800$ transmissions per second. In one period for each particular channel there are $800 \times 31.6 / 79 = 320$ times of transmissions.

CH Mid(2441MHz) : the dwell time is $0.405\text{ms} \times 320 = 129.6\text{ms}$

The maximum time of occupancy for a particular channel is 129.6.2ms in any 31.6 second period, which is less than the 400ms allowed by the rules; therefore, it meets the requirements of this section.

DH3 Mode:

The Bluetooth system hops at a rate of 1600 times per second. This means there are 1600 timeslots in one second. The DH3 data rate operates on a three-slot transmission and one-slot receiving basis. Thus there are $1600/(3+1) = 400$ transmissions per second. In one period for each particular channel there are $400 \times 31.6 / 79 = 160$ times of transmissions.

CH Mid(2441MHz) : the dwell time is $1.675\text{ms} \times 160 = 268\text{ms}$

The maximum time of occupancy for a particular channel is 268 ms in any 31.6 second period, which is less than the 400 ms allowed by the rules; therefore, it meets the requirements of this section.

DH5 Mode:

The Bluetooth system hops at a rate of 1600 times per second. This means there are 1600 timeslots in one second. The DH5 data rate operates on a five-slot transmission and one-slot receiving basis. Thus there are $1600/(5+1) = 266.7$ transmissions per second. In one period for each particular channel there are $266.7 \times 31.6 / 79 = 106.7$ times of transmissions.

CH Mid(2441MHz) : the dwell time is $2.906\text{ms} \times 106.7 = 310.0\text{ms}$

The maximum time of occupancy for a particular channel is 310.0 ms in any 31.6 second period, which is less than the 400 ms allowed by the rules; therefore, it meets the requirements of this section.

Note: 1. Please see the Plotted Data as follows
2. The expanded uncertainty of dwell time on each channel tests is 2dB.

6. 100 kHz bandwidth of the band edges

Limit:

According to 15.247(c), in any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required.

Test Procedures:

1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
2. Position the EUT without connection to measurement instrument. Turn on the EUT and connect its antenna terminal to measurement instrument via a low loss cable. Then set it to any one measured frequency within its operating range and make sure the instrument is operated in its linear range.
3. Use the following spectrum analyzer settings:
Span = wide enough to capture the peak level of the in-band emission and all spurious emissions (e.g., harmonics) from the lowest frequency generated in the EUT up through the 10th harmonic. Typically, several plots are required to cover this entire span.
RBW = 100 kHz
VBW ³ RBW
Sweep = Auto
Detector function = peak
Trace = max hold.
4. Allow the trace to stabilize. Set the marker on the peak of any spurious emission recorded. Plot the result on the screen of spectrum analyzer.
5. Repeat above procedures until all measured frequencies were complete.

Note :

1. Emission level(dBuV/m)=Read Value(dBuV) + Correction Factor(dB/m)
2. Correction Factor(dB/m) = Antenna Factor (dB/m) + Cable Factor (dB)+Amplifier Factor(dB)
3. The other emission levels were very low against the limit(>20dB to limit).
4. Remark "--" means that the emissions level is too low to be measured.
