Spain

Report prepared by Mary Sampson

Mary Sampson/Senior Project Engineer

Report reviewed by

Vathana Van/Senior Project Engineer

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

1 Introduction and Conclusion

The tests indicated in section 2.0 were performed on the product constructed as described in section 4.0. The remaining test sections are the verbatim text from the actual data sheets used during the investigation. These test sections include the test name, the specified test Method, a list of the actual Test Equipment Used, documentation Photos, Results and raw Data. No additions, deviations, or exclusions have been made from the standard(s) unless specifically noted.

Based on the results of our investigation, we have concluded the product tested **complies** with the requirements of the standard(s) indicated. The results obtained in this test report pertain only to the item(s) tested.

4 Description of Equipment Under Test

Manufacturer: Salto Systems S.L.
Pol. Lanbarren, C/ Arkotz 9
20180-OIARTZUN Gipuzkoa
Spain

Equipment Under Test			
Description	Manufacturer	Model Number	Serial Number
SALTO AEElement Lock	Salto Systems S.L.	AE9	922068

Receive Date:	01/24/2014
Received Condition:	Good
Type:	Production

Description of Equipment Under Test (provided by client)

The Salto AEElement is a 13,56Mhz RFID Contactless Smart Card wall reader. The unit reads encrypted data from the carriers and then communicates it to the door controllers.

Equipment Under Test Power Configuration			
Rated Voltage	Rated Current	Rated Frequency	Number of Phases
4.5 Vdc	Standby 30mA Opening 100mA	DC	DC

Operating modes of the EUT:

No.	Descriptions of EUT Exercising
1	The EUT was powered by 3 "AAA" batteries during emissions testing and by power supply with 4.5Vdc during frequency stability testing and placed in a continuous transmit state with normal modulation for testing.
2	

Software used by the EUT:

No.	Descriptions of EUT Exercising
1	None

5 System Setup and Method

Cables					
ID	Description	Length (m)	Shielding	Ferrites	Termination
A	DC Input	1.6	None	None	Power Supply

Support Equipment

Power Supply	Tektronix	PS2510G	TW50295

5.1 Method:

Configuration as required by ANSI C63.4-2003.

5.2 EUT Block Diagram:

General notes: For Frequency Stability, a power supply was used to power device. All other test cases, battery powered.

6 Fundamental Frequency Radiated Emissions

6.1 Method

Tests are performed in accordance with FCC Part 15 Subpart C:2014 15.225(a)(b)(c)(d), IC RSS-210 Issue 8 December 2010 A2.6(a)(b)(c)(d), ANSI C63.4-2003.

TEST SITE: 10m Semi-Anechoic Chamber

10 Meter Semi-Anechoic Chamber The test site for radiated emissions is located at 1950 Evergreen Blvd, Suite 100, Duluth, Georgia 30096. It is a 10 meter semi-anechoic chamber manufactured by Panashield. Embedded in the floor is a 3 meter diameter turntable.

Measurement Uncertainty

For radiated emissions, U_{lab} (3.9 dB at 3m and 3.6 dB at 10m below 1 GHz, and 4.2 dB at 3m above 1 GHz) $< U_{CISPR}$ (5.2 dB), which is the reference value in CISPR 16-4-2 Table 1, hence the compliance of the product is only based on the measured value, and no measurement uncertainty correction is required, based on CISPR 22 and CISPR 11 (for 2006 and later revisions) Clause 11.

Sample Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor, and subtracting the Amplifier Gain (if any) from the measured reading. The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CF - AG$$

Where

- FS = Field Strength in dB μ V/m
- RA = Receiver Amplitude (including preamplifier) in dB μ V
- CF = Cable Attenuation Factor in dB
- AF = Antenna Factor in dB
- AG = Amplifier Gain in dB

In the following table(s), the reading shown on the data table reflects the preamplifier gain. An example for the calculations in the following table is as follows.

Assume a receiver reading of 52.0 dB μ V is obtained. The antenna factor of 7.4 dB and cable factor of 1.6 dB is added. The amplifier gain of 29 dB is subtracted, giving a field strength of 32 dB μ V/m. This value in dB μ V/m was converted to its corresponding level in μ V/m.

$$RA = 52.0 \text{ dB}\mu\text{V}$$

$$AF = 7.4 \text{ dB/m}$$

$$CF = 1.6 \text{ dB}$$

$$AG = 29.0 \text{ dB}$$

$$FS = 32 \text{ dB}\mu\text{V/m}$$

To convert from dB μ V to μ V or mV the following was used:

$$UF = 10^{(NF / 20)} \text{ where } UF = \text{Net Reading in } \mu\text{V}$$
$$NF = \text{Net Reading in dB}\mu\text{V}$$

Example:

$$FS = RA + AF + CF - AG = 52.0 + 7.4 + 1.6 - 29.0 = 32.0$$

$$UF = 10^{(32 \text{ dB}\mu\text{V} / 20)} = 39.8 \mu\text{V/m}$$

Supervising/Reviewing Engineer:
 (Where Applicable)
Product Standard: FCC 15.225, IC RSS-210
Input Voltage: Battery, 3 AAA
Pretest Verification w/ Ambient Signals or BB Source: BB Source

Test Date: 02/25/14

Limit Applied: Per Section 6.3

Ambient Temperature: 22.5 °C

Relative Humidity: 26 %

Atmospheric Pressure: 983 mbars

Deviations, Additions, or Exclusions: None

7 Transmitter Spurious Emissions Below 30MHz

7.1 Method

Tests are performed in accordance with FCC Part 15 Subpart C:2014 15.209, 15.225(d), IC RSS-210 Issue 8 December 2010 A2.6(d), ANSI C63.4-2003.

TEST SITE: 10m Semi-Anechoic Chamber

The EMC Lab has one Semi-anechoic Chamber and one Shielded Chamber. AC Mains Power is available at 120, 230, and 277 Single Phase; 208, 400, and 480 3-Phase. Large reference ground-planes are installed in the general lab area to facilitate EMC work not requiring a shielded environment.

10 Meter Semi-Anechoic Chamber The test site for radiated emissions is located at 1950 Evergreen Blvd, Suite 100, Duluth, Georgia 30096. It is a 10 meter semi-anechoic chamber manufactured by Panashield. Embedded in the floor is a 3 meter diameter turntable.

Measurement Uncertainty

For conducted emissions, U_{lab} (2.8 dB in worst case) $< U_{CISPR}$ (3.6 dB), which is the reference value in CISPR 16-4-2 Table 1, hence the compliance of the product is only based on the measured value, and no measurement uncertainty correction is required, based on CISPR 22 and CISPR 11 (for 2006 and later revisions) Clause 11.

Sample Calculations

The following is how net line-conducted readings were determined:

$$NF = RF + LF + CF + AF$$

Where NF = Net Reading in dB μ V

RF = Reading from receiver in dB μ V

LF = LISN or ISN Correction Factor in dB

CF = Cable Correction Factor in dB

AF = Attenuator Loss Factor in dB

To convert from dB μ V to μ V or mV the following was used:

$$UF = 10^{(NF / 20)} \text{ where } UF = \text{Net Reading in } \mu\text{V}$$

NF = Net Reading in dB μ V

Example:

$$NF = RF + LF + CF + AF = 28.5 + 0.2 + 0.4 + 20.0 = 49.1 \text{ dB}\mu\text{V}$$

$$UF = 10^{(49.1 \text{ dB}\mu\text{V} / 20)} = 285.1 \mu\text{V/m}$$

9.3 Results:

The sample tested was found to Comply.

FCC Part 15.109

Frequency	Field Strength		Test Distance
(MHz)	$\mu\text{V}/\text{m}$	$\text{dB}\mu\text{V}/\text{m}$	(meters)
30-88	100	40.0	3
88-216	150	43.52	3
216-960	200	46.02	3
Above 960	500	53.98	3

IC RSS-Gen Table 2:

Frequency (MHz)	Field Strength (microvolts/m at 3 metres)*
30-88	100
88-216	150
216-960	200
Above 960	500

*Measurements for compliance with limits in the above table may be performed at distances other than 3 metres, in accordance with Section 7.2.7.

Client: Salto Systems
 Model Number: AE9
 Project Number: G100360832
 Tested By: MS
 Date: 2/25/14
 Frequency Range (MHz): 30-1000
 Input power: Battery, 3xAAA

Receiver: HP 8546A
 Antenna: Chase 2622
 Cables: ST-4+MP3+E-204+E-206
 Preamp: PAM-0202

Test Distance (m): 3

Limit: FCC15 Class B-3m

Modifications for compliance (y/n): n

 (Where Applicable)
 FCC 15.109
 Product Standard: IC RSS-Gen
 Input Voltage: Battery, 3 AAA
 Pretest Verification w/ BB Source: Yes

Test Date: 02/25/14

Limit Applied: Per section 9.3

Ambient Temperature: 22.5 °C
 Relative Humidity: 26 %
 Atmospheric Pressure: 983 mbars

Deviations, Additions, or Exclusions: None

10 20dB and Occupied Bandwidth

10.1 Method

Tests are performed in accordance with FCC Part 15 Subpart C:2014, IC RSS-Gen Issue 3 December 2010 Section 4.6, ANSI C63.4-2003.

TEST SITE: 10m Semi-Anechoic Chamber

The EMC Lab has one Semi-anechoic Chamber and one Shielded Chamber. AC Mains Power is available at 120, 230, and 277 Single Phase; 208, 400, and 480 3-Phase. Large reference ground-planes are installed in the general lab area to facilitate EMC work not requiring a shielded environment.

10.2 Test Equipment Used:
