

FCC Test Report

Product Name : TPMS
Trade Name : Mobiletron
Model No. : TX-N001, TX-C003M, TX-C003R, TX-C001US,
TX-C001USK, TX-C002US, TX-N003
FCC ID : ULZ-TXN001

Applicant : Mobiletron Electronics Co., Ltd.
Address : 85,Sec.4,Chung-Ching Rd.,Ta-Ya District, Taichung, Taiwan

Date of Receipt : May 12, 2020
Issued Date : Aug. 12, 2020
Report No. : 2050229R-E3032110105
Report Version : V1.0

The test results relate only to the samples tested.
The test report shall not be reproduced except in full without the written approval of DEKRA Testing and Certification Co., Ltd..

Test Report Certification

Issued Date : Aug. 12, 2020

Report No. : 2050229R-E3032110105

Product Name : TPMS

Applicant : Mobiletron Electronics Co., Ltd.

Address : 85,Sec.4,Chung-Ching Rd.,Ta-Ya District, Taichung, Taiwan

Manufacturer : Mobiletron Electronics Co., Ltd.

Address : 85,Sec.4,Chung-Ching Rd.,Ta-Ya District, Taichung, Taiwan

Trade Name : Mobiletron

Model No. : TX-N001, TX-C003M, TX-C003R, TX-C001US, TX-C001USK,
TX-C002US, TX-N003

FCC ID : ULZ-TXN001

EUT Test Voltage : DC 3V

Testing Voltage : DC 3V

Applicable Standard : FCC CFR Title 47 Part 15 Subpart C Section 15.231(b): 2019

Laboratory Name : Hsin Chu Laboratory

Address : No.372-2, Sec. 4, Zhongxing Rd., Zhudong Township, Hsinchu
County 310, Taiwan, R.O.C.
TEL: +886-3-582-8001 / FAX: +886-3-582-8958

Test Result : Complied

Documented By :

(Carol Tsai / Senior Engineering Adm. Specialist)

Tested By :

(Scott Chang / Senior Engineer)

Approved By :

(Louis Hsu / Deputy Manager)

1. General Information

1.1. EUT Description

Product Name	TPMS
Trade Name	Mobiletron
Model No.	TX-N001, TX-C003M, TX-C003R, TX-C001US, TX-C001USK, TX-C002US, TX-N003
Frequency Range / Channel Number / Type of Modulation	315.031 MHz / 1 Channel / ASK 315 MHz / 1 Channel / FSK

Antenna Information	
MFR. / Model No.	Mobiletron / 20010452
Antenna Type	LOOP Antenna
Antenna Gain	-10 dBi

ASK

Working Frequency of Each Channel	
Channel	Frequency
Channel 01	315.031 MHz

FSK

Working Frequency of Each Channel	
Channel	Frequency
Channel 01	315 MHz

Note:

1. Regards to the frequency band operation; the lowest , middle and highest frequency of channel were selected to perform the test, and then shown on this report.
2. The variation of model number is for different strategy of marketing.
3. The EUT description is from the customer declaration.

1.2. Test Mode

DEKRA has verified the construction and function in typical operation. The preliminary tests were performed in different data rate, and to find the worst condition, which was shown in this test report. The following table is the final test mode.

Test Mode	Mode 1: Transmit
-----------	------------------

Test Items	Modulation	Result
Conducted Emission	ASK / FSK	NA
Radiated Emission	ASK / FSK	Complies
Occupied Bandwidth	ASK / FSK	Complies
Duty Cycle	ASK / FSK	Complies
Transmitter Time	ASK / FSK	Complies

Determining compliance shall be based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

1.3. Tested System Details

The types for all equipment, plus descriptions of all cables used in the tested system (including inserted cards) are:

Product	Manufacturer	Model No.	Serial No.	FCC ID	Power Cord
N/A					

1.4. Configuration of tested System

1.5. Operation Descriptions

1	Setup the EUT as shown in Section 1.5.
2	Execute the "QRCT" on the laptop.
3	Configure the test mode, the test channel, and the data rate.
4	Press "Start TX" to start the continuous transmitting.
5	Verify that the EUT works properly.

1.6. Comments and Remarks

The product specification and testing instructions for the EUT declared in the report are provided by the manufacturer who will take all responsibilities for the accuracy.

1.7. Test Facility

Ambient conditions in the laboratory:

Items	Test Item	Required	Test Site
Temperature (°C)	FCC PART 15 C 15.207 Conducted Emission	15 - 35	--
Humidity (%RH)		25 - 75	
Temperature (°C)	FCC PART 15 C 15.231 Radiated Emission	15 - 35	2
Humidity (%RH)		25 - 75	
Temperature (°C)	FCC PART 15 C 15.231 Occupied Bandwidth	15 - 35	3
Humidity (%RH)		25 - 75	
Temperature (°C)	FCC PART 15 C 15.231 Duty Cycle	15 - 35	3
Humidity (%RH)		25 - 75	
Temperature (°C)	FCC PART 15 C 15.231 Transmitter Time	15 - 35	3
Humidity (%RH)		25 - 75	

Note: Test site information refers to Laboratory Information.

USA : FCC Registration Number: TW3024

Canada IC Registration Number: 22397-1 / 22397-2 / 22397-3

Signal & Spectrum Analyzer	R&S	FSV40	101049	2020/03/30	2021/03/29

Note: All equipment upon which need to calibrated are with calibration period of 1 year.

2. Conducted Emission

2.1. Test Setup

2.2. Limits

FCC Part 15 Subpart C Paragraph 15.207		
Frequency	QP	AV
0.15 - 0.50	66 - 56	56 - 46
0.50 - 5.0	56	46
5.0 - 30	60	50

Remarks: In the above table, the tighter limit applies at the band edges.

2.3. Test Procedure

The EUT and simulators are connected to the main power through a line impedance stabilization network (L.I.S.N.). This provides a 50 ohm /50uH coupling impedance for the measuring equipment. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs.)

Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.4: 2014 on conducted measurement.

Conducted emissions were investigated over the frequency range from 0.15MHz to 30MHz using a receiver bandwidth of 9KHz.

2.4. Test Specification

According to FCC Part 15 Subpart C Paragraph 15.207

2.5. Test Result

EUT using DC input voltage, so the project does not have to test for testing.

3. Radiated Emission

3.1. Test Setup

Under 1GHz Test Setup:

Above 1GHz Test Setup:

3.2. Limits

Fundamental and Harmonics Emission Limits

FCC Part 15 Subpart C Paragraph 15.231				
Frequency (MHz)	Field Strength of Fundamental		Field Strength of Harmonics	
	uV/m	dBuV/m	uV/m	dBuV/m
40.66 – 40.70	2250	67.04	225	47.04
70 – 130	1250	61.94	125	41.94
130 - 174	1250 - 3750	61.94 – 71.48	125 – 375	41.94 – 51.48
174 – 260	3750	71.48	375	51.48
260 – 470	3750 – 12500	71.48 – 81.94	375 – 1250	51.48 – 61.94
Above 470	12500	81.94	1250	61.94

Remarks:

1. RF Voltage (dBuV) = 20 log RF Voltage (uV)
2. Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system.
3. The emission limit in this paragraph is based on measurement instrumentation employing an average detector.

Spurious electric field strength limits

FCC Part 15 Subpart C Paragraph 15.209		
Frequency (MHz)	dBuV/m	dBuV/m
1.705 - 30	30	29.5
30 - 88	100	40
88 - 216	150	43.5
216 - 960	200	46
Above 960	500	54

Remarks:

1. E field strength (dBuV/m) = 20 log E field strength (uV/m)
2. In the Above Table, the tighter limit applies at the band edges.
3. Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system.

3.3. Test Procedure

The EUT and its simulators are placed on a turn table which is 0.8 or 1.5 meter above ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level.

The antenna can move up and down between 1 meter and 4 meters to find out the maximum emission level.

Both horizontal and vertical polarization of the antenna are set on measurement. In order to find the maximum emission, all of the interface cables must be manipulated according to ANSI C63.10: 2013 on radiated measurement.

On any frequency or frequencies from 9KHz(include The the lowest oscillator frequency generated within the device up to the 10th harmonic) to 1000 MHz, the limits shown are based on measuring equipment employing a quasi-peak detector function and on any frequency or frequencies above 1000 MHz the radiated limits shown are based upon the use of measurement instrumentation employing an average detector function. When average radiated emission measurement are included emission measurement below 1000 MHz, there also is a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20 dB above the maximum permitted average limit. The bandwidth below 1GHz setting on the field strength meter is 120 kHz and above 1GHz is 1MHz.

3.4. Test Specification

According to FCC Part 15 Subpart C Paragraph 15.209

3.5. Test Result

Product	TPMS

4. 20dB Bandwidth

4.1. Test Setup

4.2. Limits

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.

4.3. Test Specification

According to FCC Part 15 Subpart C Paragraph 15.231(b): 2019

6. Trnasmmitter Time

6.1. Test Setup

6.2. Limits

A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released. A transmitter activated automatically shall cease transmission within 5 seconds after activation.

Periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions, including data, to determine system integrity of transmitters used in security or safety applications are allowed if the total duration of transmissions does not exceed more than two seconds per hour for each transmitter. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.

6.3. Test Specification
