**ATTESTATION STATEMENT - Declaration of Equality for DTE505 and DTP505**

TO WHOM IT MAY CONCERN,

We, ifm electronic gmbh, declare on our sole responsibility that the model DTE505

| Article no. | HVIN   | FCC ID     | IC ID        |
|-------------|--------|------------|--------------|
| DTE505      | DTE505 | UN6-DTP505 | 6799A-DTP505 |

is identical in hardware and software to the model DTP505

| Article no. | HVIN   | FCC ID     | IC ID        |
|-------------|--------|------------|--------------|
| DTP505      | DTP505 | UN6-DTP505 | 6799A-DTP505 |

The only differences between the models are:

- Power over Ethernet (PoE) functionality  
The difference between the two devices lies in the additional Power over Ethernet (PoE) functionality of the DTP505 model. This feature is implemented through an assembly variant on the same PCB.

The radio frontend PCB and the corresponding radio software are identical for both models. To indicate the identical hardware and software regarding the radio part, the devices are labelled with 'TR29'.

We attest that the changes listed above are not relevant for any RF behaviour subject to regulatory items.

Regards,

First name, surname: André Bixenmann  
Role: Vice President
