Certificate of Test 10383-4

The equipment noted below has been fully tested by R.N. Electronics Limited and, where appropriate, conforms to the relevant subpart of FCC Part 90. This is a certificate of test only and should not be confused with an equipment authorisation. Other standards may also apply.

Equipment:	Zinwave UNItivity 5000 Remote Unit
Model Number:	305-0007
Unique Serial Number:	660100000021
Applicant:	Zinwave Ltd Harston Mill, Royston Road Harston, Cambridge CB22 7GG
Proposed FCC ID	UPO305-0007
Full measurement results are detailed in Report Number:	03-10383-2-18 Issue 02
Test Standards:	47 CFR Part 90 Effective Date 1st October 2017 47 CFR Part 2 Effective Date 1st October 2017

NOTE:

Certain tests were not performed based upon manufacturer's declarations. Certain other requirements are subject to manufacturer declaration only and have not been tested/verified. For details refer to section 3 of this report.

This report only pertains to the operation of the equipment to 47CFR part 90, for details of testing to other rule parts please see RN reports: 03-10383-1-18 (Parts 22E, 22H, 24E), 03-10383-3-18 (Part 74H), and 03-10383-2-18 (Part 27).

DEVIATIONS:

No deviations have been applied.

This certificate relates only to the unit tested as identified by a unique serial number and in the condition at the time it was tested. It does not relate to any other similar equipment and performance of the product before or after the test cannot be guaranteed. Whilst every effort is made to assure quality of testing, type tests are not exhaustive and although no non-conformances may be found, this doesn't exclude the possibility of unit not meeting the intentions of the standard or the requirements of the Federal Regulations, particularly under different conditions to those during testing. Any compliance statements are made reliant on (a) the application of the product and use of the assigned band being acceptable to the FCC and (b) the modes of operation as instructed to us by the Customer based on their specific knowledge of the application and functionality of the EUT. Statements of compliance, where measurements were made, do not include the measurement uncertainty. The measurement uncertainty, where stated, is the expanded uncertainty based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95%.

2.3 Functional description

The Remote Unit is used as part of the Zinwave UNItivity 5000 system to provide cellular and private radio services within buildings, sports arenas and similar areas.

The system is wideband in nature and can support a wide range of radio services depending upon the system that is connected to the service module of the Primary Hub.

2.4 Modes of operation

2.5 Emissions configuration

The unit was powered from the secondary hub at 48V DC. The unit was configured using the supplied network management software using the settings files prepared by Zinwave Ltd, this provided 25dB gain and +20dBm EUT output power in conjunction with an input level of -5dBm. Any attenuation introduced by the Primary/secondary hub system was also accounted for in the set-up files provided by Zinwave Ltd. Test channels and required modulations were set using the signal generators connected to the primary hub. Single channel operation was provided by generator 1 and dual channel was using two signal generators and a combiner. Output power of the signal generators was set to provide -5dBm at input to primary hub. The transmit mode was 100% continuous with EUT output power maintained at +20dBm (25dB gain). Test channels and combinations of used are stated in test modes section 2.4

The system supports operation with a number of land mobile services, so testing was performed with CW and modulated signals (including AWGN modulation signal as per KDB 935210 D05) where required. See supported services table and specific test results sections for further details.

For conducted RF tests the RF ports were connected via suitable attenuation and filtering where required and connected directly to a spectrum analyser, with losses accounted for in the measurement results.

The system is designed for operation with antennas having a maximum gain of 8.0 dBi or 5.85 dBd. This is the value used for determining EIRP or ERP where required.

Receive port	N-type coaxial	Yes

3 Summary of test results

The Zinwave UNItivity 5000 Remote Unit, 305-0007 was tested for compliance to the following standard(s) :

47 CFR Part 90 Effective Date 1st October 2017
47 CFR Part 2 Effective Date 1st October 2017

Any compliance statements are made reliant on (a) the application of the product and use of the assigned band being acceptable to the FCC and (b) the modes of operation as instructed to us by the Customer based on their specific knowledge of the application and functionality of the EUT. Whilst every effort is made to assure quality of testing, type tests are not exhaustive and although no non-conformances may be found, this doesn't exclude the possibility of equipment not meeting the intentions of the standard or the essential requirements of the directive, particularly under different conditions to those during testing. Statements of compliance, where measurements were made, do not include the measurement uncertainty. The measurement uncertainty, where stated, is the expanded uncertainty based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95%.

No deviations were applied.

5 Tests, methods and results

5.1 Spurious emissions at antenna terminals

5.1.1 Test methods

Test Requirements:	FCC Part 90 Clause 90.219(e)(3) [Reference 4.1.1 of this report] FCC Part 2 Clause 2.1053 [Reference 4.1.2 of this report]
Test Method:	ANSI C63.26 2015 Clause 5.5 [Reference 4.1.4 of this report] KDB 935210 D05 Clause 3.6 / 4.7 [Reference 4.1.5 of this report]
Limits:	FCC Part 90 Clause 90.219(e)(3) [Reference 4.1.1 of this report]

5.1.2 Configuration of EUT

EUT was tested on a bench. The EUT RF port under test was connected to a spectrum analyser via suitable attenuation. RX port was terminated into a 50 Ohm load. EUT was tested across Low, Middle and High channels within each applicable band in a single channel input mode and in a dual channel input mode modes are specified in section 2.4 of this report.

5.1.3 Test procedure

The EUT system was set up to maximum gain using the network management software provided. EUT signal level was raised until maximum output power was reached per channel/band setting as required. Measurements were made and plots taken in the required Resolution bandwidths, where applicable results are referenced to EIRP limits by consideration of the antenna gain used with the EUT of 8dBi (5.85dBd) and indicated.

Tests were performed in test site A.

5.1.4 Test equipment

5.5.2 Configuration of EUT

The EUT was tested in an ALSE and ambient conditions were monitored. The EUT was examined in its declared normal use position. The transmit port was terminated into a 30dB Attenuator and a 50Ohm load. RX port was terminated into a 50 Ohm load. EUT was tested across all required modes as specified in section 2.4 of this report.

5.5.3 Test procedure

Tests were made in accordance with the test method noted above using the measuring equipment listed in the 'Test Equipment' Section. The EUT system was set up to maximum gain using the network management software provided. EUT signal level was raised until maximum output power was reached. Peak field strength pre-scans using the field strength method were performed. The EUT's emissions were maximised by rotating it 360 degrees. This method was used to determine any signals for substitution. An RMS detector was used for any final measurements.

30MHz - 1GHz.

The measuring antenna was scanned 1 - 4m in both Horizontal and Vertical polarisations. Where required a Substitution method was performed using tuned dipoles / a calibrated bi-conical antenna. Measurement distance of 3metres was used.

1GHz – 10GHz.

The measuring antenna was used in both Horizontal and Vertical polarisations. Where required a Substitution method was performed using standard gain horn antennas. Measurement distances used were: 1 – 6 GHz at 3metres, 6 – 10 GHz at 1.2metres.

Tests were performed in test sites B & M.

5.6.3 Test procedure

The EUT system was set up to maximum gain using the network management software provided. The input levels of the two input signals were raised until either the AGC threshold was reached or the total channel power was 3dB above that specified. Measurements were made and plots taken in the required Resolution bandwidths. Where determined f_0 is at a band edge, the top two channels within the band are used instead of two channels either side of f_0 .

Tests were performed in test site A.

Limits:	None.

5.8.2 Configuration of EUT

EUT was tested on a bench. The EUT RF port under test was connected to a spectrum analyser via suitable attenuation. RX port was terminated into a 50 Ohm load. EUT was swept across the 4 operational bands with a CW signal to determine the frequency of highest power in the band. Test performed in CW sweep Band 150 – 174 MHz, CW sweep Band 406.1 – 430.0 MHz, CW sweep Band 456.0 - 512.0MHz, CW sweep Band 758.0 -768.0 MHz, CW sweep Band 769.0 -775.0 MHz, CW sweep Band 799.0 - 805.0 MHz, CW sweep Band 851.0 – 869.0MHz, and CW sweep Band 935.0 – 940.0 MHz modes.

5.8.3 Test procedure

Tests were made in accordance with the test method noted above using the measuring equipment listed in the 'Test Equipment' Section. The EUT system was set up to maximum gain using the network management software provided. EUT signal level was raised until maximum output power was reached. The EUT input signal was then swept across the applicable service band frequency and plots taken showing the frequency of highest power in the band (f_0).

5.9.2 Configuration of EUT

EUT was tested on a bench. The EUT RF port under test was connected to a spectrum analyser via suitable attenuation. RX port was terminated into a 50 Ohm load. The input to the hub was terminated with a 50 Ohm Load. EUT was measured across the pass band up to 1GHz.

5.9.3 Test procedure

Tests were made in accordance with the test method noted above using the measuring equipment listed in the 'Test Equipment' Section. Noise was measured using an RMS detector and 100 sweep averaging with the analyser set to measure 100000 sweep points. Plots were made of the noise from the system and a capture of the whole passband up to 1 GHz with 10 kHz RBW and 500 MHz span along with a capture of the 400-512 MHz UHF radio bands in 3.5 kHz steps.

5.9.5 Test results

Temperature of test environment	17-22°C
Humidity of test environment	30-44%
Pressure of test environment	100-103kPa

A maximum noise figure of -43 dBm ERP corresponds to a maximum antenna port noise figure of -48.85 dBm $(-43.0 - 8.0 \text{ dBi} + 2.15^\dagger)$

The maximum noise figure measured for the system was over 20 dB below this.

The system is typically used to provide both cellular and non-cellular services.

Further discussion of noise mitigation is included in operation exhibit "noise discussion".

[†] 8 dBi exceeds the maximum antenna gain in any band of operation and the 2.15 dB is to convert EIRP to ERP.

Results are also presented graphically in section 6

LIMITS:

90.219(d)(6).

(i) In general, the ERP of intermodulation products should not exceed -30 dBm in 10 kHz measurement bandwidth.

(ii) In general, the ERP of noise within the passband should not exceed -43 dBm in 10 kHz measurement bandwidth.

(iii) In general, the ERP of noise on spectrum more than 1 MHz outside of the passband should not exceed -70 dBm in a 10 kHz measurement bandwidth.

These results show that the EUT has PASSED this test.

The uncertainty gives a 95% confidence interval in the measurement. Expanded uncertainty (K=2) is as follows:

$< \pm 2.8 \text{ dB}$

RF Parameters: Band 759-768 MHz, Power +20 dBm, Channel Spacing N/A, Modulation AWGN, Channel 760. 5 MHz, Single channel mode

Plot of conducted emissions single Low channel (760.5MHz) 1559 – 1610 MHz range

Note: -70dBW EIRP equates to a limit of -78 dBW conducted for 8dBi antenna, which is -48dBm for wideband emissions.

Plot of conducted emissions single Low channel 1k RBW (760.5MHz) 1559 – 1610 MHz range

Note: -80dBW EIRP equates to a limit of -88 dBW conducted for 8dBi antenna, which is -58dBm for narrowband emissions (discrete signals <700Hz bandwidth)

RF Parameters: Band 759-768 MHz, Power +20 dBm, Channel Spacing N/A, Modulation AWGN,
Channel 765.5 MHz, Single channel mode

Plot of conducted emissions single Low channel (765.5MHz) 1559 – 1610 MHz range

Note: -70dBW EIRP equates to a limit of -78 dBW conducted for 8dBi antenna, which is -48dBm for wideband emissions.

Plot of conducted emissions single Low channel 1k RBW (765.5MHz) 1559 – 1610 MHz range

Note: -80dBW EIRP equates to a limit of -88 dBW conducted for 8dBi antenna, which is -58dBm for narrowband emissions (discrete signals <700Hz bandwidth)

RF Parameters: Band 769-775 MHz, Power +20 dBm, Channel Spacing N/A, Modulation CW, Channel 769.01255 MHz, Single channel mode

Plot of conducted emissions single Low channel (769.0125MHz) 1559 – 1610 MHz range

Note: -70dBW EIRP equates to a limit of -78 dBW conducted for 8dBi antenna, which is -48dBm for wideband emissions.

Plot not taken as emissions are below narrowband limit with wideband settings.

Note: -80dBW EIRP equates to a limit of -88 dBW conducted for 8dBi antenna, which is -58dBm for narrowband emissions (discrete signals <700Hz bandwidth)

RF Parameters: Band 769-775 MHz, Power +20 dBm, Channel Spacing N/A, Modulation CW, Channel 774.9875 MHz, Single channel mode

Plot of conducted emissions single Low channel (765.5MHz) 1559 – 1610 MHz range

Note: -70dBW EIRP equates to a limit of -78 dBW conducted for 8dBi antenna, which is -48dBm for wideband emissions.

Plot not taken as emissions are below narrowband limit with wideband settings.

Note: -80dBW EIRP equates to a limit of -88 dBW conducted for 8dBi antenna, which is -58dBm for narrowband emissions (discrete signals <700Hz bandwidth)

8 Test equipment calibration list

The following is a list of the test equipment used by R.N. Electronics Ltd to test the unit detailed within this report. In line with our procedures, the equipment was within calibration for the period during which testing was carried out.

RN No.	Model No.	Description	Manufacturer	Calibration date	Cal period
E268	BHA 9118	Horn Antenna 1-18 GHz	Schaffner	03-Apr-2017	12 months
E301	8493C	Attenuator 20dB 26.5GHz	Hewlett Packard	19-May-2017	12 months
E411	N9039A	9 kHz - 1 GHz RF Filter Section	Agilent Technologies	11-Jul-2017	12 months
E412	E4440A	PSA 3 Hz - 26.5 GHz	Agilent Technologies	10-Jul-2017	24 months
E428	HF906	Horn Antenna 1-18 GHz	Rohde & Schwarz	03-Apr-2017	12 months
E433	MG3693A	Signal Generator 30GHz	Anritsu	23-Jun-2016	24 months
E498	4768-20	Attenuator 20dB 40GHz	Narda	24-May-2017	12 months
E602	MG3692A	Signal Generator 10MHz - 20GHz	Anritsu	30-Jan-2017	24 months
E624	E4440A	PSA 3 Hz - 26.5 GHz	Agilent Technologies	09-Jan-2018	24 months
E642	E4440A	PSA 3 Hz - 26.5 GHz	Keysight	29-Nov-2017	24 months
E743	RR2017 4/2dB	Attenuator 4/2dB 30-1000MHz	RN Electronics	12-Feb-2018	12 months
E755	N9030B	3Hz to 50GHz PXA	Keysight	08-May-2017	12 months
LPE364	CBL6112A	Antenna Bilog 30MHz - 2GHz	Chase Electronics Ltd	15-Jan-2018	24 months
TMS82	8449B	Pre Amplifier 1 - 26 GHz	Agilent Technologies	19-Dec-2017	12 months

9 Auxiliary and peripheral equipment

9.1 Customer supplied equipment

9.2 RN Electronics supplied equipment

RN No.	Model No.	Description	Manufacturer	Serial No
E401	1506A	Splitter 18 GHz 6dB	Weinschel	LT261
I224	E442-142H16	Laptop 15.6"	emachines	LXNBF02002038164171601

10 Condition of the equipment tested

In order for the EUT to produce the results shown within this report the following modifications, if any, were implemented.

10.1 Modifications before test

No modifications were made before test by RN Electronics Ltd.

10.2 Modifications during test

No modifications were made during test by RN Electronics Ltd.

11 Description of test sites

Site A	Radio / Calibration Laboratory and anechoic chamber
Site B	Semi-anechoic chamber FCC Registration No. 293246 IC Registration No. 5612A-4
Site B1	Control Room for Site B
Site C	Transient Laboratory
Site D	Screened Room (Conducted Immunity)
Site E	Screened Room (Control Room for Site D)
Site F	Screened Room (Conducted Emissions)
Site G	Screened Room (Control Room for Site H)
Site H	3m Semi-anechoic chamber (indoor OATS) FCC Registration No. 293246 IC Registration No. 5612A-2
Site J	Screened Room
Site K	Screened Room (Control Room for Site M)
Site M	3m Semi-anechoic chamber (indoor OATS) FCC Registration No. 293246 IC Registration No. 5612A-3
Site Q	Fully-anechoic chamber
Site OATS 3m and 10m Open Area Test Site	FCC Registration No. 293246 IC Registration No. 5612A-1
Site R	Screened Room (Conducted Immunity)
Site S	Safety Laboratory
Site T	Transient Laboratory
