

TEST REPORT

Test Report No. : UL-RPT-RP11060364JD03A V2.0

Manufacturer : Paxton Access Ltd
Model No. : 477-500
FCC ID : USE477500
Technology : Zigbee (IEEE 802.15.4)
Test Standard(s) : FCC Parts 15.207, 15.209(a) & 15.247

1. This test report shall not be reproduced in full or partial, without the written approval of UL VS LTD.
2. The results in this report apply only to the sample(s) tested.
3. This sample tested is in compliance with the above standard(s).
4. The test results in this report are traceable to the national or international standards.
5. Version 2.0 supersedes all previous versions.

Date of Issue: 10 March 2016

Checked by:

Ian Watch
Senior Engineer, Radio Laboratory

Company Signatory:

Steven White
Service Lead, Radio Laboratory,
UL VS LTD

This laboratory is accredited by UKAS.
The tests reported herein have been
performed in accordance with its terms
of accreditation.

1. Customer Information

Company Name:	Paxton Access Ltd
Address:	Paxton House Home Farm Road Brighton East Sussex BN1 9HU United Kingdom

2. Summary of Testing

2.1. General Information

Specification Reference:	47CFR15.247
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Section 15.247
Specification Reference:	47CFR15.207 and 47CFR15.209
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Sections 15.207 and 15.209
Site Registration:	209735
Location of Testing:	UL VS LTD, Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom
Test Dates:	11 February 2016 to 03 March 2016

2.2. Summary of Test Results

FCC Reference (47CFR)	Measurement	Result
Part 15.207	Transmitter AC Conducted Emissions	
Part 15.247(a)(2)	Transmitter Minimum 6 dB Bandwidth	
Part 15.35(c)	Transmitter Duty Cycle	Note 1
Part 15.247(e)	Transmitter Power Spectral Density	
Part 15.247(b)(3)	Transmitter Maximum Peak Output Power	
Part 15.247(d)/ 15.209(a)	Transmitter Radiated Emissions	
Part 15.247(d)/ 15.209(a)	Transmitter Band Edge Radiated Emissions	
Key to Results  = Complied  = Did not comply		

Note(s):

1. The measurement was performed to assist with the calculation of the level of average radiated emissions.

2.3. Methods and Procedures

Reference:	ANSI C63.10-2013
Title:	American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices
Reference:	KDB 558074 D01 v03r04 January 7, 2016
Title:	Guidance for Performing Compliance Measurements on Digital Transmission Systems (DTS) Operating Under §15.247
Reference:	FCC KDB Publication Number 174176 Date: June 3, 2015
Title:	AC Power-Line Conducted Emissions Frequently Asked Questions

2.4. Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specification identified above.

3. Equipment Under Test (EUT)

3.1. Identification of Equipment Under Test (EUT)

Brand Name:	Net2Air Bridge
Model Name or Number:	477-500
Test Sample Serial Number:	G0C-5094-1-06 (<i>Radiated sample</i>)
Hardware Version:	z-ezb1
Software Version:	1.2
FCC ID:	USE477500

Brand Name:	Net2Air Bridge
Model Name or Number:	477-500
Test Sample Serial Number:	G0C-5094-1-04 (<i>Conducted sample</i>)
Hardware Version:	z-ezb1
Software Version:	1.2
FCC ID:	USE477500

Brand Name:	Net2Air Bridge
Model Name or Number:	477-500
Test Sample Serial Number:	G0C-5094-1-10 (<i>Normal operating mode sample</i>)
Hardware Version:	z-ezb1
Software Version:	1.2
FCC ID:	USE477500

3.2. Description of EUT

The Equipment Under Test was access control equipment containing an IEEE 802.15.4 transmitter. The EUT is powered from a PoE (Power over Ethernet) Injector.

3.3. Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing.

3.4. Additional Information Related to Testing

Technology Tested:	IEEE 802.15.4 (Digital Transmission System)		
Type of Unit:	Transceiver		
Modulation:	O-QPSK		
Data Rate:	250 kbit/s		
Power Supply Requirement(s):	Nominal	48 VDC from 120 VAC 60 Hz via PoE	
Maximum Conducted Output Power:	11.8 dBm		
Antenna Gain:	0.5 dBi		
Transmit Frequency Range:	2405 MHz to 2475 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	11	2405
	Middle	18	2440
	Top	25	2475

3.5. Support Equipment

The following support equipment was used to exercise the EUT during testing:

Description:	PoE Injector
Brand Name:	TP-Link
Model Name or Number:	TL-POE150S
Serial Number:	2159342003517

Description:	Power supply
Brand Name:	TP-Link
Model Name or Number:	T480050-2D1
Serial Number:	Not marked or stated

Description:	Laptop PC
Brand Name:	Dell
Model Name or Number:	Precision M6-600
Serial Number:	Not marked or stated

Description:	Nano test jig comprising five, stacked Paxton Nano boards
Brand Name:	Paxton
Model Name or Number:	654-943
Serial Numbers:	1019193, 951637, 951617, 951614 & 923548

Description:	Ethernet cable. Quantity 2. Length 3 metres.
Brand Name:	Not marked or stated
Model Name or Number:	Not marked or stated

Description:	Ethernet cable. Quantity 1. Length 10 metres.
Brand Name:	Not marked or stated
Model Name or Number:	Not marked or stated

Description:	U.FL Female to SMA Female RF cable. Length 10 cm.
Brand Name:	Not marked or stated
Model Name or Number:	Not marked or stated

4. Operation and Monitoring of the EUT during Testing

4.1. Operating Modes

The EUT was tested in the following operating mode(s):

- Test Mode: Continuously transmitting at maximum power with 100 % duty cycle on the bottom, middle and top channels.
- Normal mode: Transmitting with a modulated carrier and worst-case duty cycle.

4.2. Configuration and Peripherals

The EUT was tested in the following configuration(s):

- Continuous transmit tests: Controlled using a Paxton Net2Air Bridge test application on the laptop PC following operating instructions contained in the '*Net2Air Bridge test software for compliance testing 04 Feb 2016*' document. The application was used to enable continuous transmission to select the test channels as required.
- The EUT was powered from a PoE injector via Ethernet.
- Radiated emission tests: The test laptop and PoE injector were placed outside the anechoic chamber and connected to the EUT using a 10 metre Ethernet cable. The test laptop was connected to the PoE injector by a 3m Ethernet cable.
- All testing was performed with the EUT configured with a power setting of 10 dBm.
- Duty cycle measurements: The EUT and support equipment were controlled using a Paxton Net2Air Access Control version 127.0.0.1 application on the laptop PC following instructions contained in the '*Duty cycle test instructions_12 Feb 2016*' document. The customer supplied the EUT in its worst case (longest transmitter on time), normal mode of operation. The EUT was a conducted sample (Serial Number: G0C-5094-1-10), the support equipment was a Paxton Nano test jig. The EUT and support equipment were connected to each other via the through ports of an RF directional coupler. One side of the coupler was connected to the EUT via RF cables. An antenna was fitted to the opposite side of the directional coupler through port. This enabled communication from the EUT to the Paxton Nano test jig via a radio link. The EUT was connected to the laptop by an Ethernet cable and the support equipment communicated to the laptop PC over the air interface. The coupled port on the RF coupler was connected to the spectrum analyser.
- The customer supplied an RF test cable in order to perform conducted measurements. The insertion loss of the RF cable was included in any measurement results.
- Sample with Serial Number G0C-5094-1-06 was used for AC conducted emissions and transmitter radiated emissions tests.
- Sample with Serial Number G0C-5094-1-04 was used for 6 dB bandwidth, power spectral density and conducted output power tests.

5. Measurements, Examinations and Derived Results

5.1. General Comments

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to *Section 6. Measurement Uncertainty* for details.

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

5.2. Test Results

5.2.1. Transmitter AC Conducted Spurious Emissions

Test Summary:

Test Engineer:	Andrew Edwards	Test Dates:	23 February 2016 & 03 March 2016
Test Sample Serial Number:	G0C-5094-1-06		

FCC Reference:	Part 15.207
Test Method Used:	ANSI C63.10 Section 6.2 / FCC KDB 174176 and notes below.

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	29 to 31

Note(s):

1. The EUT was connected to the TP-link PoE injector via Ethernet. The TP-Link power supply was connected to a 120 VAC 60 Hz single phase supply via the LISN.
2. In accordance with FCC KDB 174176 Q4, tests were repeated with a 240 VAC 60 Hz single phase supply as this was within the voltage range marked on the TP-Link power supply.
3. A pulse limiter was fitted between the LISN and the test receiver.
4. Pre-scans were performed and markers placed on the highest live and neutral measured levels. Final measurements were performed on the marker frequencies and the results entered into the tables below.

Test setup:

Transmitter AC Conducted Spurious Emissions (continued)**Results: Live / Quasi Peak / 120 VAC 60 Hz**

Frequency (MHz)	Line	Level (dBμV)	Limit (dBμV)	Margin (dB)	Result
0.150	Live	49.6	66.0	16.4	Complied
0.258	Live	46.4	61.5	15.1	Complied
0.321	Live	41.9	59.7	17.8	Complied
0.573	Live	43.4	56.0	12.6	Complied
0.578	Live	44.3	56.0	11.7	Complied
14.672	Live	33.0	60.0	27.0	Complied

Results: Live / Average / 120 VAC 60 Hz

Frequency (MHz)	Line	Level (dBμV)	Limit (dBμV)	Margin (dB)	Result
0.258	Live	40.8	51.5	10.7	Complied
0.321	Live	36.3	49.7	13.4	Complied
0.573	Live	38.1	46.0	7.9	Complied
0.578	Live	38.3	46.0	7.7	Complied
20.949	Live	27.9	50.0	22.1	Complied
22.817	Live	30.1	50.0	19.9	Complied

Transmitter AC Conducted Spurious Emissions (continued)**Results: Neutral / Quasi Peak / 120 VAC 60 Hz**

Frequency (MHz)	Line	Level (dB μ V)	Limit (dB μ V)	Margin (dB)	Result
0.150	Neutral	49.3	66.0	16.7	Complied
0.195	Neutral	43.9	63.8	19.9	Complied

5.2.2. Transmitter Minimum 6 dB Bandwidth**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	24 February 2016
Test Sample Serial Number:	G0C-5094-1-04		

FCC Reference:	Part 15.247(a)(2)
Test Method Used:	FCC KDB 558074 Section 8.1 Option 1

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	30

Note(s):

1. 6 dB DTS bandwidth tests were performed using a test receiver in accordance with FCC KDB 558074 Section 8.1 Option 1 measurement procedure. The test receiver resolution bandwidth was set to 100 kHz and video bandwidth 300 kHz. A peak detector was used, sweep time was set to auto and the trace mode was Max Hold. The DTS bandwidth was measured at 6 dB down from the peak of the signal.
2. The test receiver was connected to the RF port on the EUT using suitable attenuation and RF cable.

Test setup:

Transmitter Minimum 6 dB Bandwidth (continued)**Results:**

Channel	6 dB Bandwidth (kHz)	Limit (kHz)	Margin (kHz)	Result
Bottom	1666.667	≥500	1166.667	Complied
Middle	1746.795	≥500	1246.795	Complied
Top	1618.590	≥500	1118.590	Complied

**Bottom Channel****Middle Channel****Top Channel**

Transmitter Minimum 6 dB Bandwidth (continued)**Test Equipment Used:**

Asset No.	Instrument	Manufacturer	Type No.	Serial No.	Date Calibration Due	Cal. Interval (Months)
M1656	Thermohygrometer	JM Handelspunkt	30.5015.13	Not stated	23 Apr 2016	12
M1886	Test Receiver	Rohde & Schwarz	ESU26	100554	21 May 2016	12
A2528	Attenuator	AtlanTecRF	AN18W5-20	832828#3	Calibrated before use	-

5.2.3. Transmitter Duty Cycle**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	24 February 2016
Test Sample Serial Number:	G0C-5094-1-10		

FCC Reference:	Part 15.35(c)
Test Method Used:	ANSI C63.10 Section 7.5

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	30

Note(s):

1. In order to assist with the determination of the average level of spurious emissions field strength, conducted measurements were made of duty cycle to determine the transmission duration and the silent period time of the transmitter. Five pulses of 3.952 ms and six pulses of 0.298 ms duration occurred within a 100 ms period, therefore the total transmitter on time is 21.548 ms. The transmitter on time was measured using a test receiver in the time domain and duty cycle calculated as follows:

$$\delta \text{ (dB)} = 20 \log \left[\sum (nt_1 + mt_2) / T \right]$$

$$\delta \text{ (dB)} = 20 \log \left[\sum (19.760 + 1.788 \text{ ms}) / 100 \text{ ms} \right]$$

$$\delta \text{ (dB)} = 20 \log \left[\sum (21.548 \text{ ms}) / 100 \text{ ms} \right] = 13.4 \text{ dB}$$

$$20 \log[0.215] = 13.4 \text{ dB}$$

Test setup:

Transmitter Duty Cycle (continued)**Results:**

Total Pulse Duration (ms)	Duty Cycle (dB)
21.548	13.4

Sub pulse	Duration (ms)	Number of pulses in 100 ms	Total on time (ms)
1	3.952	5	19.760
2	0.298	6	1.788

**Sub pulse 1****Sub pulse 2****100 ms period**

Transmitter Duty Cycle (continued)**Test Equipment Used:**

Asset No.	Instrument	Manufacturer	Type No.	Serial No.	Date Calibration Due	Cal. Interval (Months)
M1656	Thermohygrometer	JM Handelspunkt	30.5015.13	Not stated	23 Apr 2016	12
M1886	Test Receiver	Rohde & Schwarz	ESU26	100554	21 May 2016	12
A2032	Directional coupler	Narda	4242B	03547	Calibrated before use	-

5.2.4. Transmitter Power Spectral Density**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	02 March 2016
Test Sample Serial Number:	G0C-5094-1-04		

FCC Reference:	Part 15.247(e)
Test Method Used:	FCC KDB 558074 Section 10.2

Environmental Conditions:

Temperature (°C):	22
Relative Humidity (%):	33

Note(s):

1. Transmitter Power Spectral Density tests in all bands were performed using a test receiver in accordance with FCC KDB 558074 Section 10.2.
2. The test receiver resolution bandwidth was set to 3 kHz and video bandwidth of 10 kHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold. The span was set to 1.5 times the measured DTS bandwidth. A marker was placed at the peak of the signal and the results recorded in the table below.
3. The test receiver was connected to the RF port on the EUT using suitable attenuation and RF cable. An RF level offset was entered on the test receiver to compensate for the loss of the attenuator and RF cable.

Test setup:

Transmitter Power Spectral Density (continued)**Results:**

Channel	Output Power (dBm / 3 kHz)	Limit (dBm / 3 kHz)	Margin (dB)	Result
Bottom	-4.0	8.0	12.0	Complied
Middle	-4.8	8.0	12.8	Complied
Top	-5.3	8.0	13.3	Complied

**Bottom Channel****Middle Channel****Top Channel**

Transmitter Power Spectral Density (continued)**Test Equipment Used:**

Asset No.	Instrument	Manufacturer	Type No.	Serial No.	Date Calibration Due	Cal. Interval (Months)
M1656	Thermohygrometer	JM Handelspunkt	30.5015.13	Not stated	23 Apr 2016	12
M1886	Test Receiver	Rohde & Schwarz	ESU26	100554	21 May 2016	12
M260	Signal Generator	Rohde & Schwarz	SMP02	829076/008	27 Apr 2016	12
M199	Power Meter	Rohde & Schwarz	NRVS	827023/075	08 Apr 2016	24
M1267	Power Sensor	Rohde & Schwarz	NRV-Z52	100155	23 Apr 2016	24
A2528	Attenuator	AtlanTecRF	AN18W5-20	832828#3	Calibrated before use	-

5.2.5. Transmitter Maximum Peak Output Power**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	24 February 2016
Test Sample Serial Number:	G0C-5094-1-04		

FCC Reference:	Part 15.247(b)(3)
Test Method Used:	FCC KDB 558074 Section 9.1.1

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	30

Note(s):

1. Conducted power tests were performed using a spectrum analyser in accordance with FCC KDB 558074 Section 9.1.1.
2. The test receiver resolution bandwidth was set to 3 MHz and video bandwidth of 10 MHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold. The span was set to 10 MHz. A marker was placed at the peak of the signal and the results recorded in the table below.
3. The test receiver was connected to the RF port on the EUT using suitable attenuation and RF cables. An RF level offset was entered on the test receiver to compensate for the loss of the attenuator and RF cable.
4. The declared antenna gain was added to the conducted power to obtain the EIRP.

Test setup:

Transmitter Maximum Peak Output Power (continued)**Results:**

Channel	Conducted Peak Power (dBm)	Conducted Peak Power Limit (dBm)	Margin (dB)	Result
Bottom	11.5	30.0	18.5	Complied
Middle	11.8	30.0	18.2	Complied
Top	11.7	30.0	18.3	Complied

Channel	Conducted Peak Power (dBm)	Declared Antenna Gain (dBi)	EIRP (dBm)	De Facto EIRP Limit (dBm)	Margin (dB)	Result

5.2.6. Transmitter Radiated Emissions**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	11 February 2016
Test Sample Serial Number:	G0C-5094-1-06		

FCC Reference:	Parts 15.247(d) & 15.209(a)
Test Method Used:	ANSI C63.10 Sections 6.3 and 6.5
Frequency Range	30 MHz to 1000 MHz

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	32

Note(s):

1. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
2. The preliminary scans showed similar emission levels below 1 GHz, for each channel of operation. Therefore final radiated emissions measurements were performed with the EUT set to the middle channel only.
3. All other emissions were at least 20 dB below the appropriate limit or below the noise floor of the measurement system and therefore not recorded.
4. Measurements below 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
5. Pre-scans were performed and markers placed on the highest measured levels. The test receiver resolution bandwidth was set to 100 kHz and video bandwidth 300 kHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold.
6. Final measurements were performed on the marker frequencies and the results entered into the table below. The test receiver resolution bandwidth was set to 120 kHz, using a CISPR quasi-peak detector and span wide enough to see the whole emission.

Transmitter Radiated Emissions (continued)**Test setup for radiated measurements: Semi-anechoic chamber****Test setup for radiated measurements: Anechoic chamber**

Transmitter Radiated Emissions (continued)**Results: Middle Channel**

Frequency (MHz)	Antenna Polarity	Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
125.008	Vertical	37.7	43.5	5.8	Complied

Note: This plot is a pre-scan and for indication purposes only. For final measurements, see accompanying table.

Test Equipment Used:

Asset No.	Instrument	Manufacturer	Type No.	Serial No.	Date Calibration Due	Cal. Interval (Months)

Transmitter Radiated Emissions (continued)**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	11 February 2016
Test Sample Serial Number:	G0C-5094-1-06		

FCC Reference:	Parts 15.247(d) & 15.209(a)
Test Method Used:	FCC KDB 558074 Sections 11 & 12 referencing ANSI C63.10 Sections 6.3 and 6.6
Frequency Range	1 GHz to 25 GHz

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	32

Note(s):

1. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
2. All other emissions shown on the pre-scan plot were investigated and found to be ambient or >20 dB below the applicable limit or below the measurement system noise floor.
3. The emission shown on the 1 GHz to 4 GHz plot is the EUT fundamental.
4. Pre-scans above 1 GHz were performed in a fully anechoic chamber (Asset Number K0002) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the test chamber floor in the centre of the chamber turntable. All measurement antennas were placed at a fixed height of 1.5 metres above the test chamber floor, in line with the EUT. Final measurements above 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 1.5 m above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
5. Pre-scans were performed and markers placed on the highest measured levels the test receiver was set up as followed: a RBW set to 1 MHz, the VBW set to 3, with the sweep time set to auto couple. Peak and average measurements were performed with appropriate detectors during the pre-scan measurements.
6. *Duty cycle correction can be applied to a peak measurement in order to calculate the average emission level. Duty cycle was measured as 13.4 dB. Therefore 13.4 dB has been subtracted from the measured peak levels in order to obtain the average emission levels stated in the result tables below.

5.2.7. Transmitter Band Edge Radiated Emissions**Test Summary:**

Test Engineer:	Andrew Edwards	Test Dates:	11 February 2016
Test Sample Serial Number:	G0C-5094-1-06		

FCC Reference:	Parts 15.247(d) & 15.209(a)
Test Method Used:	ANSI C63.10 Section 6.10.4, 6.10.5 / KDB 558074 Section 11 & 13.3.1

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	33

Note(s):

1. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
2. The maximum peak conducted output power was previously measured. In accordance with FCC KDB 558074 Section 11.1(a), the lower band edge measurement was performed with a peak detector and the -20 dBc limit applied.
3. There is a restricted band 10 MHz below the lower band edge. The test receiver was set up as follows: the RBW set to 1 MHz, the VBW set to 3 MHz, with the sweep time set to auto couple. Peak and average measurements were performed with their respective detectors. Markers were placed on the highest point on each trace.
4. * -20 dBc limit.
5. **The upper band edge average measurement exceeded the limit using the test method stated in ANSI C63.10 Section 6.10.5. Therefore the measurement was repeated using the integration method stated in FCC KDB 558074 Section 13.3.1 and the result was compliant.

6. Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document "approximately" is interpreted as meaning "effectively" or "for most practical purposes".

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
AC Conducted Spurious Emissions	0.15 MHz to 30 MHz	95%	±4.69 dB
Duty Cycle	2.4 GHz to 2.4835 GHz	95%	±1.14 %
Conducted Maximum Peak Output Power	2.4 GHz to 2.4835 GHz	95%	±1.13 dB
Minimum 6 dB Bandwidth	2.4 GHz to 2.4835 GHz	95%	±3.92 %
Radiated Spurious Emissions	30 MHz to 1 GHz	95%	±5.65 dB
Radiated Spurious Emissions	1 GHz to 25 GHz	95%	±2.94 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.
