

Test Report

22-1-0081701T008a

Number of pages:	23	Date of Report:	2023-Oct-17
Testing company:	cetecom advanced GmbH Untertürkheimer Str. 6-10 66117 Saarbrücken, Germany Tel. + 49 (0) 681 598 0 Fax: + 49 (0) 681 598 9075	Applicant:	WITTE-Velbert GmbH & Co.KG
Product:	Automotive NFC Outer Door Handle		
Model:	DH501		
FCC ID:	V2T-DH501	IC:	7575A-DH501
Testing has been carried out in accordance with:	Title 47 CFR, Chapter I FCC Regulations, Subchapter A Subpart C: §15.225 (NFC) ISED regulations: RSS-Gen, Issue 5 + Amendment 2 RSS-210, Issue 10: B.6		
Tested Technology:	NFC (13.56MHz)		
Test Results:	☒ The EUT complies with the requirements in respect of all parameters subject to the test. The test results relate only to devices specified in this document		
Signatures:	 cn=Andreas Luckenbill, o=cetecom advanced GmbH, ou=LUC-230601, email=andreas.luckenbill@cetecomadvanced.com, c=DE 2023.10.17 09:33:07 +02'00'  Dipl.-Ing. Christian Lorenz Lab Manager Responsible of test report M.Sc. Andreas Luckenbill Head of Compliance Testing Authorization of test report

1 General information

1.1 Disclaimer and Notes

The test results of this test report relate exclusively to the test item specified in this test report as specified in chapter 2.7. cetecom advanced does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of cetecom advanced.

The testing service provided by cetecom advanced has been rendered under the current "General Terms and Conditions for cetecom advanced".

cetecom advanced will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the cetecom advanced test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the cetecom advanced test report include or imply any product or service warranties from cetecom advanced, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by cetecom advanced.

All rights and remedies regarding vendor's products and services for which cetecom advanced has prepared this test report shall be provided by the party offering such products or services and not by cetecom advanced.

In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

The test report must always be reproduced in full; reproduction of an excerpt only is subject to written approval of the testing laboratory. The documentation of the testing performed on the tested devices is archived for 10 years at cetecom advanced.

Also we refer on special conditions which the applicant should fulfill according §2.927 to §2.948, special focus regarding modification of the equipment and availability of sample equipment for market surveillance tests.

1.2 Attestation

I declare that all measurements were performed by me or under my supervision and that all measurements have been performed and are correct to my best knowledge and belief to Industry Canada standards. All of the above requirements are met in accordance with enumerated standards.

1.3 Summary of Test Results

The EUT integrates **RFID** technology. Other implemented wireless technologies were not considered within this test report.

Test case	Reference Clause FCC ☒	Reference Clause ISED ☒	Page	Remark	Result
Radiated field strength emissions 30 MHz – 1 GHz	§15.209(a)	RSS-Gen: Issue 5 §8.9 Table 5	11	--	PASSED
Radiated field strength emissions below 30 MHz	§15.209(a)	RSS-Gen: Issue 5 §8.9 Table 6	13	--	PASSED
Radiated field strength emissions and emission mask	§15.225(a)(b)(c) (d)	RSS-210, Issue 10, Annex B.6 (a)	16	--	PASSED
Occupied Channel Bandwidth 99%	§2.202(a) §2.1049(h)	RSS-Gen, Issue 5, §6.6	17	--	PASSED
Frequency stability	§2.1055 §15.225(e)	RSS-210, Issue 10, Annex B.6 (b)	18	--	PASSED
AC-Power Lines Conducted Emissions	§15.207	RSS-Gen Issue 5: §8.8, Table 4	--	--	N/A

PASSED

The EUT complies with the essential requirements in the standard.

FAILED

The EUT does not comply with the essential requirements in the standard.

N/A

Test case does not apply to the test object.

NP

The test was not performed by the cetecom advanced laboratory.

Decision Rule: cetecom advanced GmbH follows [ILAC G8:2019 chapter 4.2.1 \(Simple Acceptance Rule\)](#).

1.4 Summary of Test Methods

Test case	Test method
Occupied Channel Bandwidth 99%	ANSI C63.10:2013, §6.9
Radiated field strength emissions below 30 MHz	ANSI C63.10-2013 §6.3, §6.4
Radiated field strength emissions 30 MHz- 1 GHz	ANSI C63.4-2014 §8.2.3, ANSI C63.10-2013 §6.3, § 6.5
Frequency stability tests	ANSI C63.10-2013; §6.8
AC-Power Lines Conducted Emissions	ANSI C63.4-2014 §7, ANSI C63.10-2013 § 6.2

2 Administrative Data

2.1 Identification of the Testing Laboratory

Company name:	cetecom advanced GmbH
Address:	Untertürkheimer Str. 6-10 66117 Saarbrücken, Germany Tel. + 49 (0) 681 598 0
Responsible for testing laboratory:	Mr. Andreas Luckenbill
Accreditation scope:	DAkkS Webpage: FCC ISED
IC Lab company No. / CAB ID:	3462D / DE0005
Test location 1:	Im Teelbruch 116; 45219 Essen
Test location 2:	Untertürkheimer Str. 6-10; 66117 Saarbrücken

2.2 General limits for environmental conditions

Temperature:	22±2 °C
Relative. humidity:	45±15% rH

2.3 Test Laboratories sub-contracted

Company name:	--
---------------	----

2.4 Organizational Items

Responsible test manager:	Dipl.-Ing. Christian Lorenz
Receipt of EUT:	2023-Aug-23
Date(s) of test:	2023-Aug-23, 2023-Sept-29, 2023-Oct-11
Version of template:	23.0901

2.5 Applicant's details

Applicant's name:	WITTE-Velbert GmbH & Co.KG
Address:	Höferstr. 3 - 15 42551 Velbert North Rhine-Westphalia Germany
Contact Person:	Mr. Kay Lackmann
Contact Person's Email:	kay.lackmann@witte-automotive.de

2.6 Manufacturer's details

Manufacturer's name:	WITTE-Velbert GmbH & Co.KG
Address:	Höferstr. 3 - 15 42551 Velbert Deutschland

2.1 Equipment under Test (EUT)

EUT No. *)	Sample No.	Product	Model	Type	SN	HW	SW
1	S09_C01	Automotive NFC Outer Door Handle	DH501	DH501	20230817-06	D6.1	23.16.19
2	S12_C01	Automotive NFC Outer Door Handle	DH501	DH501	20230817-01	D6.1	23.16.19
3	S13_C01	Automotive NFC Outer Door Handle	DH501	DH501	20230817_02	D6.1	23.16.19

*) EUT short description is used to simplify the identification of the EUT in this test report.

2.2 Untested Variant (VAR)

VAR No. *)	Sample No.	Product	Model	Type	SN	HW	SW
------------	------------	---------	-------	------	----	----	----

*) The listed additional untested model variant(s) (VAR) is/are not object of evaluation of compliance. For further information please see Annex 5: Declaration of applicant of model differences.

If the table above does not show any other line than the headline, no untested variants are available.

2.3 Auxiliary Equipment (AE)

AE No. *)	Sample No.	Auxiliary Equipment	Model	SN	HW	SW
1	S23	Handle holder and NFC Card Holder	--	#1	--	--
2	S20	NFC card	W003589072200	#1	--	--

*) AE short description is used to simplify the identification of the auxiliary equipment in this test report. If the table above does not show any other line than the headline, no AE was used during testing nor was taken into account for evaluation

2.4 Connected cables (CAB)

CAB No. *)	Sample No.	Cable Type	Connectors / Details	Length
1	S17	Shielded both ends	--	1m

*) CAB short description is used to simplify the identification of the connected cables in this test report. If the table above does not show any other line than the headline, no cable was used during testing nor was taken into account for evaluation

2.5 Software (SW)

SW No. *)	Sample No.	SW Name	Description	SW Status
-----------	------------	---------	-------------	-----------

*) SW short description is used to simplify the identification of the used software in this test report. If the table above does not show any other line than the headline, no SW was used during testing nor was taken into account for evaluation.

2.6 EUT set-ups

set-up no. *)	Combination of EUT and AE	Description
1	EUT 1 + CAB 1	Used for radiated measurements, Op.Mode 1
2	EUT 2 + AE1 + AE2 + CAB1	Used for radiated measurements, Op.Mode 2 distance EUT to Tag = 3cm
3	EUT 3 + AE 1+ AE 2 + CAB 1	Used for climatic chamber measurements, Op.Mode 3

*) EUT set-up no. is used to simplify the identification of the EUT set-up in this test report.

2.7 EUT operation modes

EUT operating mode no. *)	Operating modes	Additional information
1	TX continuous	Unmodulated carrier, 100% transmission duty-cycle
2	TX/RX continuous with Tag	Modulated carrier, 100% transmission duty-cycle
3	TX/RX normal mode with Tag	Modulated carrier with RFID Tag, Continuous Read out of tag

*) EUT operating mode no. is used to simplify the test report.

3 Equipment under test (EUT)

3.1 General Data of Main EUT as Declared by Applicant

Firmware	☒ for normal use	☒ Special version for test execution	
Power supply	☐ AC Mains	-	
	☒ DC Mains	13.5 V DC via DC Connector	
	☐ Battery	-	
Operational conditions	T _{nom} =21 °C	T _{min} =-40 °C	T _{max} =+85 °C
EUT sample type	Pre-Production		
Weight	See applicants papers		
Size [LxWxH]	See pictures		
Interfaces/Ports	DC port		
For further details refer Applicants Declaration & following technical documents:			

3.2 Detailed Technical data of Main EUT as Declared by Applicant

Frequency Band	13.110 MHz – 14.010 MHz
Number of Channels (USA/Canada -bands)	1 nominal at 13.56 MHz
Channel Bandwidth (99%OBW)	549.8kHz
Type of Modulation Data Rate	ASK
Other installed options	None
Emission classification	A1D
Protocol	Accord. ISO/IEC 14443-2 standard
Antenna Type	Loop antenna: 4cmx2cm
Antenna Gain	n/a for loop antennas
FCC label attached	No
Test firmware / software and storage location	EUT

For further details refer Applicants Declaration & following technical documents

3.3 Modifications on Test sample

Additions/deviations or exclusions	--
------------------------------------	----

4 Measurements

4.1 Radiated field strength emissions 30 MHz – 1 GHz

4.1.1 Description of the general test setup and methodology, see below example:

Evaluating the field emissions have to be done first by an exploratory emissions measurement and a final measurement for most critical frequencies. The tests are performed in a NSA-compliant semi anechoic room (SAR) recognized by the regulatory commissions.

Schematic:

Testing method:

The measurement is made according to relevant reference clauses:
(See Tables *Summary of Test Results* and *Summary of Test Methods* on page 5)

Exploratory, preliminary measurements

The EUT and its associated accessories are placed on a non-conductive position manipulator (tipping device) of 0.8 m height which is placed on the turntable. By rotating the turntable (range 0° to 360°, step 90°) and the EUT itself either on 3-orthogonal axis (portable equipment) or 2-orthogonal axis (defined operational position of EUT) the emission spectrum and its characteristics was recorded with an EMI-receiver, broadband antenna and software.

Measurement antenna: horizontal and vertical, heights: 1,0 m and 1,82 m as worst-case determined by an exploratory emission measurements. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case of them. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

Final measurement on critical frequencies

Based on the exploratory measurements, the most critical frequencies are re-measured by main-taining the EUT's worst-case operation mode, cable position, etc. either on 10m OATS or 3m semi-anechoic room.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined.

Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, the EUT itself either over 3-orthogonal axis (not defined usage position) or 2-orthogonal axis (defined usage position). The measurement antenna height between 1 m and 4 m.

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out

Formula:

$$E_C = E_R + AF + C_L + D_F - G_A \quad (1)$$

$$M = L_T - E_C \quad (2)$$

AF = Antenna factor

C_L = Cable loss

D_F = Distance correction factor (if used)

E_C = Electrical field – corrected value

E_R = Receiver reading

G_A = Gain of pre-amplifier (if used)

L_T = Limit

M = Margin

All units are dB-units, positive margin means value is below limit.

4.1.2 Sample calculation

Raw-Value [dBuV/m]	Antenna factor	Distance Correction [dB]	Cable Loss	Preamplifier	Resulting correction value [dB]	Final result [dBuV/m]	Remarks
32.7	22.25	--	3.1	--	25.35	58.05	--

Remark: This calculation is based on an example value at 800.4 MHz

4.1.3 Measurement Location

Test site	120901 - SAC3 - Radiated Emission <1GHz
-----------	---

4.1.4 Limit

Frequency Range [MHz]	Class B ☒ (3 meters)		Class A ☒ (10 meters)		Detector	RBW / VBW [kHz]
	Limit [μV/m]	Limit [dBμV/m]	Limit [μV/m]	Limit [dBμV/m]		
30 - 88	100	40.0	90	39.0	Quasi peak	100 / 300
88 - 216	150	43.5	150	43.5	Quasi peak	100 / 300

960 - 1000	500	54.0	300	49.5	Quasi peak	100 / 300

4.1.5 Result

Diagram	Set-up	Mode	Maximum Level [dBμV/m] Frequency Range 30 – 1000 MHz	Result
3.01	1	TX, Op.Mode1	42.31@325.43MHz	Passed
3.02	2	TX/RX, Op.Mode2	41.59@927.07MHz	Passed

Remark: for more information and graphical plot see annex A1 TR22-1-0081701T008a_A1

4.2 Radiated field strength emissions below 30 MHz

4.2.1 Description of the general test setup and methodology, see below example:

Evaluating the radiated field emissions are done first by an exploratory emission measurement and a final measurement for most critical frequencies determined.

The loop antenna was placed at 1 m height above ground plane and 3 m measurement distance from set-up for investigations. Because of reduced measurement distance, correction data were applied, as stated in chapter "General Limit - Radiated field strength emissions below 30 MHz". The tests are performed in the semi anechoic room recognized by the regulatory commission.

Schematic:

Testing method:

The measurement is made according to relevant reference clauses:

(See Tables *Summary of Test Results* and *Summary of Test Methods* on page 5)

Exploratory, preliminary measurements

The EUT and its associated accessories are placed on a non-conductive position manipulator (tipping device) of 0.8 m height which is placed on the turntable. By rotating the turntable (step 90°, range 0° to 360°) and the EUT itself either on 3-orthogonal axis (portable equipment) or 2-orthogonal axis (defined operational position of EUT), the emission spectrum was recorded.

The loop antenna was moved at least to 2-perpendicular axes (antenna vector in direction of EUT and parallel to EUT) in order to maximize the emissions. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a data reduction table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

Final measurement on critical frequencies

Based on the exploratory measurements, the most critical frequencies are re-measured by maintaining the EUT's worst-case operation mode, cable position, etc.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined.

Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, the EUT itself either over 3-orthogonal axis (not defined usage position) or 2-orthogonal axis (defined usage position).

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

Formula:

$$E_C = E_R + AF + C_L + D_F - G_A$$

$$M = L_T - E_C$$

AF = Antenna factor

C_L = Cable loss

D_F = Distance correction factor (if used)

E_C = Electrical field – corrected value

E_R = Receiver reading

G_A = Gain of pre-amplifier (if used)

L_T = Limit

M = Margin

All units are dB-units, positive margin means value is below limit.

4.2.2 Sample calculation

Raw-Value [dBuV/m]	Antenna factor	Distance Correction [dB]	Cable Loss	Preamplifier	Resulting correction value [dB]	Final result [dBuV/m]	Remarks
19.83	18.9	-70.75	0.18	--	-51.67	-31.83	30 to 3 m correction used according ANSI C63.10-2013

Remark: This calculation is based on an example value at 458 kHz

4.2.3 Correction factors due to reduced meas. distance (f < 30 MHz):

The used correction factors when the measurement distance is reduced compared to regulatory measurement distance, are calculated according Extrapolation formulas valid for EUT's with maximum dimension of 0.625xLambda. Formula 2+3+4 as presented in ANSI C63.10, Chapter 6.4.4 are used for the calculations of proper extrapolation factors

Frequency Range	f [kHz/MHz]	Lambda [m]	Far-Field Point [m]	Distance Limit accord. 15.209 [m]	1st Condition (dmeas < Dnear-field)	2nd Condition (Limit distance bigger dnear-field)	Distance Correction accord. Formula

4.2.6 Limits spectrum-mask, §15.225

Frequency Range [MHz]	Limit [μV/m]	Limit [dBμV/m]	Detector	RBW [kHz]	Remark
13.553 – 13.567	15.848	84	PEAK	10	PEAK, TRACE max-hold mode, repetitive scan for exploratory measurements Quasi-Peak, for final measurement on critical frequencies (f<1GHz)
13.410 – 13.553 and 13.567 – 13.710	334	50.47			
13.110 – 13.410 and 13.710 – 14.010	106	40.5			
$f \leq 13.110 - 14.010 \geq f$	30	29.5			

4.2.7 Results for Carrier field strength within 13.553 – 13.567MHz

Diagram	Band	Mode	Maximum Level [dBμV/m] Frequency Range 0.009 MHz – 30 MHz	Result
2.01a	13.110- 14.010	TX, Op.Mode1	44.18	Passed
2.01b			39.80	Passed
2.02a		TX/RX, Op.Mode 2	46.25	Passed
2.02b			39.93	Passed

Remark: for more information and graphical plot see annex A1 TR22-1-0081701T008a_A1

4.2.8 Results spurious radiation, §15.209

Diagram	Band	Mode	Maximum Level [dBμV/m] Frequency Range 0.009 MHz – 30 MHz	Result
2.03	Outside	TX, Op.Mode 1	20.16	Passed
2.04	13.110- 14.010	TX/RX, Op.Mode 2	≤ 20.0	Passed

Remark:

- 1.) Carrier on diagram at around 13.558MHz, not relevant for verdict
- 2.) for more information and graphical plot see annex A1 TR22-1-0081701T008a_A1

4.3 Occupied Channel Bandwidth 99%

4.3.1 Description of the general test setup and methodology, see below example:

The EUT's RF-signal is coupled out by a suitable antenna coupling connector (1). The signal is then directly connected to the spectrum – analyzer (4) for specific RF-measurements. The specific attenuation losses for both signal paths/branches are determined prior to the measurement within a set-up calibration. These are then taken into account by correcting the measurement readings on the spectrum-analyzer.

In case an external connector is not available, the coupling unit consists of a near-field antenna which is directly connected to the spectrum analyser. The power level calibration of the spectrum analyser is related to the power levels (field strengths) of the carrier determined in the anechoic-chamber.

Schematic:

Testing method:

The measurement is made according to relevant reference clauses:
(See Tables *Summary of Test Results* and *Summary of Test Methods*)

4.3.2 Measurement Location

Test site 2 Location 2	SRD/004	RC1G lab
------------------------	---------	----------

4.3.3 Limit

When the occupied bandwidth limit is not stated in the applicable reference measurement method, the transmitted signal bandwidth shall be reported as the 99% emission bandwidth, as calculated or measured.

4.3.4 Result

Diagram	Channel	Mode	Frequency [MHz]	99% Occupied bandwidth [kHz]
See Annex 1	nominal	Op. Mode 3	13.5597	549.8

Remark: for more information and graphical plot see annex A1TR22-1-0081701T008a_A1

4.4 Frequency stability

4.4.1 Description of the general test setup and methodology, see below example:

A sniffer antenna acts like a coupling antenna for measuring the fundamental frequency. This is placed at about 20cm away from the equipment. Also connecting cables at the equipment are avoided on the extent possible in order not to degrade the resonance frequency of the equipment and integral antenna.

If the equipment is capable of producing an un-modulated carrier then a trace with max-hold function was recorded. The maximum peak within the span was found, then the frequency deviation was recorded with the build-in frequency counter within the spectrum-analyzer. The maximum resolution was chosen on the settings.

The frequency deviation was recorded at switching on point of the equipment and on 2 minutes, 5 minutes and 10 minutes after at in accordance with ANSI 63.10: 2013, Chapter 6.8

All measurements data are enclosed in annex measurements. Here only maximum frequency error is reported.

Schematic:

Testing method:

The measurement is made according to relevant reference clauses:

(See Tables *Summary of Test Results* and *Summary of Test Methods* on page 5)

8 Measurement Uncertainty valid for conducted/radiated measurements

The reported uncertainties are calculated based on the standard uncertainty multiplied with the appropriate coverage factor **k**, such that a confidence level of approximately 95% is achieved. For uncertainty determination, each component used in the concrete measurement set-up was taken in account and its contribution to the overall uncertainty according its statistical distribution calculated.
