Note: SAR is not required for the following 2.4 GHz OFDM conditions. When the highest reported SAR for DSSS is adjusted by the ratio of OFDM to DSSS specified maximum output power and the adjusted SAR is ≤ 1.2 W/kg.

Table 10.1.2 UNII Head SAR

| MEASUREMENT RESULTS                                                                                       |    |                   |                                      |                             |                        |                     |                            |                          |                                                 |               |                     |                   |                                      |                            |            |

Note: U-NII-1 and U-NII-2A Bands: When different maximum output power is specified for the bands, begin SAR measurement in the band with higher specified maximum output power. The highest reported SAR for the tested configuration is adjusted by the ratio of lower to higher specified maximum output power for the two bands. When the adjusted SAR is ≤ 1.2 W/kg, SAR is not required for the band with lower maximum output power in that test configuration.

Note(s):

1. Blue entries represent Extended Battery measurements.

2. APD (Absorbed Power Density) over 4 cm² averaging area is reported based on SAR measurements.

3. 10 W/m² = 1.0 mW/cm²

Note: SAR is not required for the following 2.4 GHz OFDM conditions. When the highest reported SAR for DSSS is adjusted by the ratio of OFDM to DSSS specified maximum output power and the adjusted SAR is  $\leq 1.2$  W/kg.

Note: U-NII-1 and U-NII-2A Bands: When different maximum output power is specified for the bands, begin SAR measurement in the band with higher specified maximum output power. The highest reported SAR for the tested configuration is adjusted by the ratio of lower to higher specified maximum output power for the two bands. When the adjusted SAR is  $\leq 1.2$  W/kg, SAR is not required for the band with lower maximum output power in that test configuration.

Note(s):

1. Blue entries represent Extended Battery measurements.

2. APD (Absorbed Power Density) over 4 cm² averaging area is reported based on SAR measurements.

3. 10 W/m² = 1.0 mW/cm²

Table 10.2.6 Bluetooth/Bluetooth LE Body-Worn SAR
