

Quick Setup Guide

A920Pro Smart Mobile Payment Terminal

(This document is intended for professional cashiers, not consumers)

PAX TECHNOLOGY LIMITED

1. Checklist

Congratulations on receiving your PAX Technology payment terminal. We do hope you enjoy it! The box you have just opened should contain the following items:

- 1 x PAX A920Pro Smart Mobile Payment Terminal
 - 1 x Thermal Paper Roll
 - 1 x AC Power Adapter
 - 1 x Battery
 - 1 x 2-in-1 Magnetic + Type-C cable
-

2. Product Description

Magnetic
charging port

Type C Port

3. Installation

USB Port: connect to a USB-enabled device.

SAM/SIM/MicroSD Cards:

- Open the battery cover underneath the terminal.
- Remove the battery.
- Insert SAM/SIM/MicroSD cards into the corresponding card slots.

4. Instructions

- Power On/Off:** Power On: press and hold the Power button for 5 seconds until the LCD lights on, showing that the terminal is being turned on.
Power Off: press and hold the Power button for 3 seconds until the shutdown menu appears, tap Power Off > Click Power Off, and “Shutting Down” will appear.
- Contactless Transactions:** Tap a contactless enabled card or smartphone in proximity to the top end of the terminal where the contactless sensor is located, indicated by the contactless icon.

- **Chip Card Transactions:** With the card's chip facing upwards, insert the chip card fully into the chip card slot.
 - **Magnetic Stripe Transactions:** With the card's magnetic stripe facing downwards, swipe the card through the magnetic reader at a constant speed, in either direction.
 - **Paper Receipts:** Tear off the receipt at a 45-degree angle to the paper cutter.
 - **Battery Charging:** With a charging cable connected, the device's charging status shows on the display.
-

5. General Usage Tips

- Avoid placing this product in direct sunlight for extended periods, nor in environments with excessively high temperature, moisture or dust.
 - Only qualified personnel should repair this product.
 - Before using cards in the chip & magstripe readers, please ensure they are free from any foreign objects.
-

6. Important Safety Warning

- Do not place the terminal or battery in direct sunlight, nor in environments with excessively high temperatures, smoke, dust, or dampness.
- Do not attempt to disassemble the battery, nor insert or use foreign objects to penetrate the casing. Never place the battery in a fire or excessively hot surfaces. Take care not to drop the battery. Excessive external shocks or pressure could cause battery liquid leakage or result in the battery catching fire or even exploding. Keep the battery well away from children and animals.
- Immediately replace any battery which appears to be deformed, expanded or in an overheated state.
- We recommend you only use power adaptors supplied by PAX Technology. If you must use 3rd party supplier accessories, please ensure specifications meet exactly those recommended for our products, which must comply with international and local regulations & standards. Non-compatible power supplies, chargers or batteries could cause fires or even explosions, and will invalidate any product warranty.

- Charge the battery when the indicator level is low, but make sure to never charge a battery continuously for more than 24 hours. If a battery is not used for a long time, please charge it at least once every 6 months to avoid overcharge or discharge damage. For long-term optimal product performance, it is recommended that a battery be replaced after 2 years of continual usage.
- When disposing of the device, battery, or accessories, please do so responsibly and according to local regulations. These are not household waste items. Improper disposal of the battery could cause a fire or explosion, and any liquid leakage could be damaging to the environment and toxic to humans & animals.
- Please use PAX adaptor and cable for better battery result and device life.
- For a better experience, it's recommended to replace the battery if it has been used for more than 2 years.

7. FCC Regulations:

This device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiated radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

8. FCC RF Exposure Information (SAR)

This device is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the United States.

During SAR testing, this device is set to transmit at its highest certified power level in all tested frequency bands, and placed in positions that simulate RF exposure in usage near the body. Although the SAR is determined at the highest certified power

level, the actual SAR level of the while operating can be well below the maximum value. This is because the device is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

The exposure standard for wireless employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg.

The FCC has granted an Equipment Authorization for this model device with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model device is on file with the FCC and can be found under the Display Grant section of www.fcc.gov/oet/ea/fccid after searching on

FCC ID: V5PPAXA920PRO

While there may be differences between the SAR levels of various devices and at various positions, they all meet the government requirement.

9. ISED Radiation Exposure Statement

This EUT is in compliance with SAR for general population/uncontrolled exposure limits in ISED RSS-102 and had been tested in accordance with the measurement methods and procedures specified in IEEE 1528 and IEC 62209. This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter.

Cet appareil est conforme aux limites d'exposition DAS incontrôlée pour la population générale de la norme CNR-102 science de l'innovation et le développement économique Canada et a été testé en conformité avec les méthodes de mesure et procédures spécifiées dans IEEE 1528 et IEC 62209. Cet appareil et sa ou ses antennes ne doivent pas être co-localisés ou fonctionner en conjonction avec tout autre antenne ou transmetteur.

The device is going on be operated in 5150~5250 frequency range. It is restricted indoor environment only in Canada.

Le dispositif fonctionne dans une gamme de fréquences 5150~5250. [L'environnement intérieur est restreint seulement au Canada.](#)

10. ISED Notice

This device complies with Innovation, Science and Economic Development Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

(1) this device may not cause interference, and

(2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence.

L'exploitation est autorisée aux deux conditions suivantes:

(1) l'appareil ne doit pas produire de brouillage, et

(2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en

10. Working Mode Tips

- A920Pro has BMS (Battery management system) function to protect the lithium battery from being over-charged, so A920Pro can work either on Desktop mode or Mobile Mode (Select “Settings” > “Battery” > “More Settings” > “Power Supply Work Mode”).

- **Desktop Mode**

The terminal is mainly powered by external power supply, which includes charging base, power adapter and wireless charging.

- **Mobile Mode**

The terminal is mainly powered by battery, and generally no external power is inserted.

- We specify different charging and discharging parameters for the two working modes, as detailed below.
 - The device is restricted to indoor use only when operating in the 5150 to 5350 MHz frequency range.
-

11. Environmental Parameters

- **Working Environment:** Temperature: 0°C~45°C(32°F~113°F)

- **Storage Environment:** Temperature: -20°C ~ 70°C (-4°F ~ 158°F)
- **Humidity:** 5% ~ 95% (non-condensing)
