Declaration – MIF for HAC RF Interference Evaluation

To whom it may concern:

This device, with FCC ID: **V65E4750**, has been tested to, and will be certified to, the Hearing Aid Compatibility Requirement per **ANSI C63.19-2011 version per Part 20.19**.

The M rating was determined by measuring the maximum steady state average E-field values in dB (V/m) as documented in the HAC report and adding the MIF value in dB (V/m) using pre-determined values provided by Speag, 10011 CAB (16.01.2014), 10081 CAB (16.01.2014), 10295 CAB (16.01.2014), 10061 CAB (26.11.2014), 10077 CAB (26.11.2014), 10069 CAB (26.11.2014).

The Speag-reference documentation for supporting the pre-determined MIF value is Schmid & Partner Engineering AG, **UID SUMMARY (Communication Systems for Calibration, Issued Date 2016/11/16)**.

We confirm that the Speag simulation provided represents all the air interface modes applicable for a HAC rating for this handset.

Sincerely,

A handwritten signature in black ink, appearing to read "Douglas Dunn", written over a horizontal line.
