To Whom It May Concern:

The Kantech Mullion series of Smart Card Readers operating at 13.56MHz are built using the same enclosure, hardware (RF circuitry) and have similar functionality. Both models also include a BLE (Bluetooth Low Energy) circuitry operating in 2.4GHz band. The only differences are related to the presence of the keypad (for PIN entry) option:

KT-MUL-SC-KP – Smart Card reader (no support for IoProx cards) with integral keypad
KT-MUL-SC – Smart Card reader (no support for IoProx cards) without keypad support

The testing of model KT-MUL-MT-KP is representative for all models in this family.

Respectfully yours,

Dan Nita
