To Whom It May Concern:

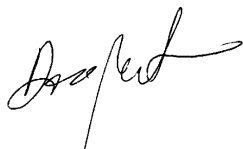

The Kantech Single-gang series of Smart Card Readers operating at 125kHz/13.56MHz are built using the same enclosure, hardware (RF circuitry) and have similar functionality. Both models also include a BLE (Bluetooth Low Energy) circuitry operating in 2.4GHz band. The only differences are related to the presence of the keypad (for PIN entry) option:

KT-SG-MT-KP – Multi Technology card reader (smart card and IoProx card) with integral keypad

KT-SG-MT – Multi technology card reader (smart card and IoProx card) without keypad support

The testing of model KT-SG-MT-KP is representative for all models in this family.

Respectfully yours,
