6. TEST CONDITIONS AND RESULTS

6.1. Effective isotropic radiated power (EIRP)

Reference standard:	EUROCAE ED-62 Revision B, December 2018 + Change 1, June 2020
Test method:	ED-62B §3.8.5 and §5.5.6
Test description: Measurements were performed in a reference test site that complies to CISPR 16-1-4 (OATS). ELT in fixed configuration is placed in the center of a ground plane with a radius of 125 cm ± 5 cm mounted at 0.75 m above ground level. Measurement of the radiated signals for all configurations is made at a point 10 m from the ELT. At this point, an insulated antenna mast with a movable boom is arranged so that a search antenna is raised and lowered through an elevation of 1m to 4m. The Power EIRP values are obtained with the following formula: $PEIRP = LOG^{-1} \frac{P_{REC} - G_{REC} + L_C + L_P}{10}$ Where: P_{REC} = Measured Power level from spectrum analyzer (dBm) G_{REC} = Antenna gain of search antenna (dB) L_C = Receive system attenuator and cable loss (dB) L_P = Free space propagation loss (dB)	

TEST CASE	PARAMETER	SEVERITY	RESULT TAB.	VERDICT
Maximum EIRP – Ground plane config	121.65 MHz 243.3 MHz	>17dBm <26dBm	EMI4589	PASS
Pattern deviation – Ground plane config	121.65 MHz	-6 dB	EMI4590	PASS

LABORATORY PARAMETERS:	REQUIRED PRIOR TO THE TEST	DURING THE TEST
Ambient Temperature	15 to 35 °C	28 °C
Relative Humidity	20 to 75 %	41 %
Atmospheric pressure	N/A	1014 hPa
Test method deviation: N/A		
Supplementary information: 406.00 MHz frequency is rejected by a notch filter.
