Product compliance is the responsibility of the client; therefore, the tests and equipment modes of operation represented in this report were agreed upon by the client, prior to testing. The results of this test pertain only to the sample(s) tested. The specific description is noted in each of the individual sections of the test report supporting this certificate of test. This report reflects only those tests from the referenced standards shown in the certificate of test. It does not include inspection or verification of labels, identification, marking or user information. As indicated in the Statement of Work sent with the quotation, Element's standard process is to always use the latest published version of the test methods even when earlier versions are cited in the test specification. Issuance of a purchase order was de facto acceptance of this approach. Otherwise, the client would have advised Element in writing of the specific version of the test methods they wanted applied to the subject testing

ACCREDITATIONS AND AUTHORIZATIONS

United States

FCC - Designated by the FCC as a Telecommunications Certification Body (TCB). Certification chambers, Open Area Test Sites, and conducted measurement facilities are listed with the FCC.

A2LA - Each laboratory is accredited by A2LA to ISO / IEC 17025, and as a product certifier to ISO / IEC 17065 which allows Element to certify transmitters to FCC and IC specifications.

Canada

ISED - Recognized by Innovation, Science and Economic Development Canada as a Certification Body (CB) and as a CAB for the acceptance of test data.

European Union

European Commission – Recognized as an EU Notified Body validated for the EMCD and RED Directives.

United Kingdom

BEIS – Recognized by the UK as an Approved Body under the UK Radio Equipment and UK EMC Regulations.

Australia/New Zealand

ACMA - Recognized by ACMA as a CAB for the acceptance of test data.

Korea

MSIT / RRA - Recognized by KCC's RRA as a CAB for the acceptance of test data.

Japan

VCCI - Associate Member of the VCCI. Conducted and radiated measurement facilities are registered.

Taiwan

BSMI – Recognized by BSMI as a CAB for the acceptance of test data.

NCC - Recognized by NCC as a CAB for the acceptance of test data.

Singapore

IDA – Recognized by IDA as a CAB for the acceptance of test data.

Israel

MOC – Recognized by MOC as a CAB for the acceptance of test data.

Hong Kong

OFCA – Recognized by OFCA as a CAB for the acceptance of test data.

Vietnam

MIC – Recognized by MIC as a CAB for the acceptance of test data.

PRODUCT DESCRIPTION

Client and Equipment Under Evaluation Information

Company Name:	Masimo Corporation
Address:	52 Discovery
City, State, Zip:	Irvine, CA 92618
Evaluation Requested By:	Anami Joshi
EUT:	Masimo Wireless Charger
Date of Evaluation:	2/28/2024

Information Provided by the Party Requesting the Evaluation

Functional Description of the Equipment:
Masimo Wireless Charger is intended to charge Masimo devices.
Objective:
To demonstrate compliance with FCC Requirements for RF exposure for 2.1093 for portable devices.

RF EXPOSURE CONDITION

The following RF Exposure conditions were used for the assessment documented in this report:	
Intended Use	Portable
Location on Body (if applicable)	NA
How is the Device Used	Less than 20 cm from user.
Radios Contained in the Same Host Device	WPT
Simultaneous Transmitting Radios	None
Body Worn Accessories	N/A
Environment	General Population/Uncontrolled Exposure

RF EXPOSURE MEASUREMENT OF E-FIELD AND H-FIELD

TEST DESCRIPTION

Testing was performed using the mode(s) of operation and configuration(s) noted within the report. The individuals and/or the organization requesting the test provided the modes, configurations and settings used to complete the evaluation. The actual test parameters are specified in the test data, this includes items such as investigated frequency range (scanned) and test levels. The testing methods and performance specifications, as well as the test site used for the evaluation are indicated in the test data.

Wireless Power Transfer (WPT) devices operating up to 4 MHz meet the RF exposure requirements defined in 47 CFR 2.1091 and 2.1093 when the near-field E- and H-field strength values do not exceed the reference levels defined for each frequency range. Below 100 kHz: 83 V/m and 90 A/m (assessed on a case-by-case basis through FCC inquiry), from 100 kHz to 300 kHz: 614 V/m and 1.63 A/m, and from 300 kHz to 4 MHz: the MPE limits defined in Table 1 to 47 cfr 1.1310 (e)(1). A three-axis near-field probe measured E- and H-field values at all user-accessible surfaces of the EUT (maximum RMS value). The position of the probe relative to the EUT side was investigated to find the maximum field strength values. The separation distance between the probe and the EUT, for portable equipment, was measured from the EUT to 20 cm with 2 cm increments. For table-top equipment, the measurement was made at a maximum distance of 15 cm. Mobile equipment was measured at a distance of 20 cm to the normal use distance.

During measurement, the EUT was configured to deliver maximum charging to a client device.

COMMENTS

WPT charging watch
Max duty cycle set at 50%.

Charging Frequency:	150~200 kHz
Mode of charging:	Inductive
Exposure condition:	Portable (Normal use distance: >0cm)
Rule part for the WPT device:	Part 15.209

Preliminary measurements taken at all sides of EUT (WPT source): Front, Left, Right, Back, Top, Bottom. Worst case determined to be Left side of EUT.

Measurements taken using Speag extrapolation function at 0cm, 2cm, and 4cm. 2cm and 4cm extrapolated values within 30% of non-extrapolated measurements:

At 2cm Distance
