2.4 Device Description

Operating mode

The device has no radar detection capabilities and no ad-hoc capabilities in the 5GHz DFS bands.

Master device identification

The DFS compliant master device used for testing was a Cisco Dual Band Access Point Model AIR-SAP2602E-A-K9; SN FGL1648Z5HP; FCC ID: LDK102080; IC: 2461B-102080.

Channel loading messages or sequences

Channel loading was achieved using iPerf software.

Transmit Power Control

Since the device does not exceed 27dBm EIRP, TPC is not required.

User access to detected radar waveforms

The device does not utilize radar detection, this requirement is not applicable

Time required for master or client device to complete its power on cycle

The master device took 1 minute 11 seconds to complete its power on cycle.

The client device does not have radar detection. Its power on time is not applicable.

System Architecture

The EUT utilizes IP based system architecture

Uniform Channel Spreading

Not applicable for non radar detecting devices

List all antennas and their corresponding gains

The UUT employs a 0dBi trace antenna.

The calibrated conducted DFS detection threshold level was set at -63 dBm at the antenna port of the Master device. This satisfies the DFS detection threshold requirement +1 dB.
