1 GENERAL

1.1 Purpose

The purpose of this report is to demonstrate compliance with Part 15 Subpart E of the FCC's Code of Federal Regulations and Innovation, Science and Economic Development Canada's Radio Standards Specification RSS-247.

1.2 Applicant Information

Murata Electronics, N.A. Inc.
2200 Lake Park Drive
Smyrna, GA. 30080

1.3 Product Description

The Murata Electronics, N.A. Inc. model LBEE5ZZ1CK-982 is an IEEE 802.11a/b/g/n/ac WLAN + Bluetooth 4.0 wireless transceiver module. The test report documents the compliance of the 5 GHz WLAN mode of operation.

Technical Details

Mode of Operation: WLAN IEEE 802.11a/n/ac
Modulations: OFDM
Antenna Type/Gain: PCB Trace Antenna, 0.7 dBi
Input Power: 3.6 VDC
Equipment Type: Mobile/Portable

Band of Operation* [MHz]	Mode of Operation 802.11	Ch. Range [MHz]	Number of Available Channels	Channel Spacing	Data Rate or MCS Index
5150 - 5250	a	5180 - 5240	4	20	6 Mbps – 54 Mbps
5250 - 5350		5260 - 5320	4		
5470 - 5725		5500 - 5720	12		
5725 - 5850		5745 - 5825	5		
5150 - 5250	n (HT20)	5180 - 5240	4	20	6.5 Mbps – 65 Mbps
5250 - 5350		5260 - 5320	4		
5470 - 5725		5500 - 5720	12		
5725 - 5850		5745 - 5825	5		
5150 - 5250	n (HT40) ac (VHT40)	5190 - 5230	2	40	13.5 Mbps – 135 Mbps (n HT40) 13.5 Mbps – 180 Mbps (ac VHT40)
5250 - 5350		5270 - 5310	2		
5470 - 5725		5510 - 5710	6		
5725 - 5850		5755 - 5795	2		
5150 - 5250	ac (VHT80)	5210	1	80	29.3 Mbps – 390 Mbps
5250 - 5350		5290	1		
5470 - 5725		5530 - 5690	3		
5725 - 5850		5775	1		

* Operation in the 5600 – 5660 MHz band is not applicable to Innovation Science Economic Development Canada.

Model Number: LBEE5ZZ1CK-982

Test Sample Serial Number(s): 433900071FAC

Test Sample Condition: The samples were in good conditions with no observable physical damages.

1.4 Test Methodology and Considerations

The EUT was evaluated for RF conducted emissions for the 5 GHz 802.11a/n/ac WLAN mode of operation. The EUT provides a proprietary switched connector that adapts to an SMA connector for the RF conducted measurements.

Preliminary power measurements were performed at one channel for all the available data rates offered by the EUT. The data rates leading to the highest output power were used for all the remaining measurements and are documented in this test report.

Compliance to the radiated and power line conducted emissions requirements are documented in a separate test report.

Table 1.4-1: IEEE 802.11a/n/ac Test Configuration

Band of Operation	Mode of Operation	Frequency [MHz]	Channel	Power Setting	Data Rate (Modulation Index)

		5785	157		
		5825	165		
	802.11n 40 MHz	5755	151	11.5 dBm	108 Mbps (MCS5)
		5795	159		
	802.11ac 80 MHz	5775	155	11 dBm	351 Mbps (MCS8)

* Operation in the 5600 – 5660 MHz band is not applicable to Innovation Science Economic Development Canada.

2 TEST FACILITIES

2.1 Location

The radiated and conducted emissions test sites are located at the following address:

Advanced Compliance Solutions, Inc.
3998 FAU Blvd, Suite 310
Boca Raton, Florida 33431
Phone: (561) 961-5585
Fax: (561) 961-5587
www.acstestlab.com

FCC Test Firm Registration #: 475089

Innovation, Science and Economic Development Canada Lab Code: 4175C

2.2 Laboratory Accreditations/Recognitions/Certifications

ACS is accredited to ISO/IEC 17025 by ANSI-ASQ National Accreditation Board under their ANAB program and has been issued certificate number AT-1533 in recognition of this accreditation. Unless otherwise specified, all test methods described within this report are covered under the ISO/IEC 17025 scope of accreditation.

2.3 Radiated & Conducted Emissions Test Site Description

2.3.1 Semi-Anechoic Chamber Test Site

The EMC radiated test facility consists of an RF-shielded enclosure. The interior dimensions of the indoor semi-anechoic chamber are approximately 48 feet (14.6 m) long by 36 feet (10.8 m) wide by 24 feet (7.3 m) high and consist of rigid, 1/8 inch (0.32 cm) steel-clad, wood core modular panels with steel framing. In the shielded enclosure, the faces of the panels are galvanized and the chamber is self-supporting. 8-foot RF absorbing cones are installed on 4 walls and the ceiling. The steel-clad ground plane is covered with vinyl flooring.

The turntable is driven by pneumatic motor, which is capable of supporting a 2000 lb. load. The turntable is flush with the chamber floor which it is connected to, around its circumference, with a continuous metallic loaded spring. An EMCO Model 1060 Multi-device Controller controls the turntable position.

A pneumatic motor is used to control antenna polarizations and height relative to the ground. The height information is displayed on the control unit EMCO Model 1050.

The control room is an RF shielded enclosure attached to the semi-anechoic chamber with two bulkhead panels for connecting RF, and control cables. The dimension of the room is 7.3 m x 4.9 m x 3 m high and the entrance doors of both control and conducted rooms are 3 feet (0.91 m) by 7 feet (2.13 m).

A diagram of the Semi-Anechoic Chamber Test Site is shown in Figure 2.3.1-1 below:

Figure 2.3.1-1: Semi-Anechoic Chamber Test Site

2.3.2 Conducted Emissions Test Site Description

The dimensions of the shielded conducted room are $7.3 \times 4.9 \times 3 \text{ m}^3$. The power line conducted emission site includes two LISNs: a Solar Model 8028-50 $50 \Omega/50 \mu\text{H}$ and an EMCO Model 3825/2R, which are installed as shown in the figure below. For evaluations requiring 230 V, 50 Hz AC input, a Polarad LISN (S/N 879341/048) is used in conjunction with a California Instruments signal generator Model 2001RP-OP1.

A diagram of the room is shown below in figure 2.3.2-1:

Figure 2.3.2-1: AC Mains Conducted EMI Site

B	Twisted Pair	1.22 m	No	SDIO Interface Board to Power Supply
C	USB	0.84 m	No	Evaluation Board to Laptop

6 EQUIPMENT UNDER TEST SETUP BLOCK DIAGRAM

7 SUMMARY OF TESTS

Along with the tabular data shown below, plots were taken of all signals deemed important enough to document.

7.1 Antenna Requirement – FCC: Section 15.203

The EUT uses a printed trace antenna etched on the transceiver module PCB. The antenna is not detachable, thus meeting the requirements of FCC Section 15.203.

7.2 Emission/Occupied Bandwidth - FCC: Section 15.407(a), 15.407(e); ISSED Canada: RSS-247 6.2, RSS-GEN 6.6

7.2.1 Measurement Procedure

The 6dB bandwidth was measured in accordance with the FCC KDB Publication No. 789033 D02 General UNII Test Procedures New Rules v01r02 "Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices Part 15, Subpart E" Minimum Emission Bandwidth for the band 5.725-5.85 GHz. The RBW of the spectrum analyzer was set to 100 kHz and VBW 300 kHz. Span was set large enough to capture the entire emissions and >> RBW.

The 26 dB Emission Bandwidth (EBW) was measured in accordance with the FCC KDB Publication No. 789033 D02 General UNII Test Procedures New Rules v01r02 "Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices Part 15, Subpart E" Emission Bandwidth (EBW). The RBW was set to approximately 1% of the emission bandwidth. The bandwidth was measured as the maximum width of the emission that is 26 dB down from the maximum of the emission.

The 99% occupied bandwidth was measured with the spectrum analyzer span set to fully display the emission, including the emissions skirts. The RBW was to 1% to 5% of the occupied bandwidth. The occupied 99% bandwidth was measured using the occupied bandwidth function of the analyzer.

7.2.2 Measurement Results

Results are shown below.

7.3 Maximum Conducted Output Power

7.3.1 Measurement Procedure (Conducted Method)

The Peak Output Power was measured in accordance with the KDB Publication No. 789033 D02 General UNII Test Procedures New Rules v01r02 "Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices Part 15, Subpart E" Method SA-2. Justification for the Duty Cycle correction factor used in provide is Section 7.6. The RF output of the equipment under test was directly connected to the input of the spectrum analyzer through suitable attenuation. The power was integrated over the 99% alternative bandwidth instead of the 26 dB bandwidth.

7.4 Maximum Power Spectral Density

7.4.1 PSD Measurement Procedure (Conducted Method)

The power spectral density was measured in accordance with the FCC KDB Publication No. 789033 D02 General UNII Test Procedures New Rules v01r02 "Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices Part 15, Subpart E" Maximum Power Spectral Density (PSD). The RF output port of the EUT was directly connected to the input of the spectrum analyzer. Offset values were input for cable, external attenuation and transmission duty cycle.

For devices operating in the 5.15-5.25 GHz, 5.25-5.35 GHz and 5.47-5.725 GHz bands, the spectrum analyzer RBW was set to 1 MHz and VBW $\gg 3 \times$ RBW. The power spectral density was measured from the Maximum Conducted Output Power Measurement.

For devices operating in the band 5.725 – 5.85 GHz, the spectrum analyzer RBW was set to 500 kHz and VBW $\gg 3 \times$ RBW. The power spectral density was measured as the maximum level from the average power over 500 kHz reference bandwidth.

7.5 Frequency Stability – FCC Section 15.407(g), ISED Canada RSS-Gen 8.11**7.5.1 Measurement Procedure**

The equipment under test is placed inside an environmental chamber. The RF output is directly coupled to the input of the measurement equipment and a power supply is attached to the primary supply voltage.

Frequency measurements were made at the extremes of the of temperature range -30°C to $+50^{\circ}\text{C}$ and at intervals of 10°C at normal supply voltage. A period of time sufficient to stabilize all components of the equipment was allowed at each frequency measurement. At a temperature 20°C the supply voltage was also reduced to the endpoint. The maximum variation of frequency was recorded.

Results of the test are shown below

7.5.2 Measurement Results

Frequency Stability

Frequency (MHz): 5180

Deviation Limit (PPM): 20

Temperature C	Frequency MHz	Frequency Error (PPM)	Voltage (%)	Voltage (VDC)
-30 C	5180.034671	6.693	100%	3.60
-20 C	5180.049000	9.459	100%	3.60
-10 C	5180.043662	8.429	100%	3.60

8 CONCLUSION

In the opinion of ACS, Inc., the model LBEE5ZZ1CK-982 meets the requirements of FCC Part 15 subpart E and Innovation, Science and Economic Development Canada's Radio Standards Specification RSS-247 for the test procedures documented in the test report.
