Statement of Wireless LAN Function Disable

Product: Mobile phone
Model No.: F-04J
FCC ID: VQK-F04J

Channels 12 and 13

The above device has capabilities of Channels 12 and 13. These functions cannot be activated by the user in case the mobile phone is used or switched on in the United States. These channels are disabled based upon GSM850, PCS 1900, and W-CDMA Band V Mobile Country Code (MCC) checking. Channels 12 and 13 are not activated when the mobile phone switched on in the United States or the mobile phone switched on outside service area in both cases these functions are also not activated automatically.

When the mobile phone is inside the service area of a network, it will search all available networks. These functions will not switch on automatically unless the mobile phone detects a network having Channels 12 and 13. Therefore these functions are never activated in the United States where there is no commercial network for those services. While searching for the network the mobile phone does not transmit any signal.

Also, the user access to all functions related to Channels 12 and 13 will be disabled where it cannot detect networks having those services and this prevents the user from manually switching on these functions.

In case you have any question, please contact us,

Name and surname of authorized representative: Yoshihiko Taki

Date: December 28th, 2016
